Collision on I-75 Lawrence David Weiss, 2004 *Collision on I 75* tells an extraordinary public health story that has not been told before and it tells it in a compelling and exciting way It details over two decades of struggle by public health professionals legislators state officials and law enforcement to compel a huge corporation to prevent deadly suspected industrial fog related collisions A couple of weeks before Christmas in 1990 nearly one hundred vehicles collided on Interstate 75 northeast of Chattanooga in an unusually dense fog bank leaving 12 dead and dozens seriously injured Within days of the collision Attorney Douglas Fees was contacted by Evelyn Piper whose son Craig had burned to death in the cab of his truck on I 75 Fees became the lead attorney in the case eventually representing nearly all the accident victims who sought legal assistance It became clear to Fees that the cause of the tragedy was an artificial industrial fog that originated at the Bowater pulp mill a couple of miles up the valley from where the collision occurred Bowater was the largest pulp mill in the United States and the largest employer and landowner in Tennessee This is the true story of a tragic incident involving large numbers of people corporate negligence faulty state regulation and a risk taking attorney in pursuit of uncertain compensation for the victims and himself *Highway Accident Report* ,197? **Multidisciplinary Accident**

Dynamics of Heterogeneous Materials Vitali Nesterenko,2013-03-09 This monograph deals with the behavior of essentially nonlinear heterogeneous materials in processes occurring under intense dynamic loading where microstructural effects play the main role This book is not an introduction to the dynamic behavior of materials and general information available in other books is not included The material herein is presented in a form I hope will make it useful not only for researchers working in related areas but also for graduate students I used it successfully to teach a course on the dynamic behavior of materials at the University of California San Diego Another course well suited to the topic may be nonlinear wave

dynamics in solids especially the part on strongly nonlinear waves About 100 problems presented in the book at the end of each chapter will help the reader to develop a deeper understanding of the subject I tried to follow a few rules in writing this book 1 To focus on strongly nonlinear phenomena where there is no small parameter with respect to the amplitude of disturbance including solitons shock waves and localized shear 2 To take into account phenomena sensitive to materials structure where typical space scale of material parameters particle size cell size are presented in the models or are variable in experimental research *Department of Transportation and Related Agencies Appropriations for Fiscal Year 1993* United States.
