Aquatic Dermatology Domenico Bonamonte, Gianni Angelini, 2016-09-14. This well illustrated quick reference book now in its second edition is a comprehensive guide to the aquatic skin diseases caused by biotic and non biotic noxae. It will assist the dermatologist in recognizing and treating a host of unfamiliar conditions that are nevertheless steadily increasing in prevalence owing to wider use of the hydrosphere for holiday sport and occupational activities throughout the year. Beyond the thorough examination of the dermatoses caused by a wide range of organisms such as jellyfish, sea anemones, echinoderms, molluscs, algae, aquatic worms and fish, attention is drawn to potential systemic reactions which can be serious or even fatal. In addition, the entire spectrum of wound infections and reactions due to microscopic organisms populating the aquatic environment, e.g. mycobacteria, streptococci, *Aeromonas* and vibrios, is considered. Finally, detailed attention is paid to the many other conditions linked to salt or freshwater contact including aquagenic urticaria and pruritus, chlorine irritation, contact dermatitis from swimming or diving equipment, surfer's nodules and chemical conjunctivitis. *Aquatic Dermatology* will be a quick reference to improve knowledge of the aquatic environment and its risks and a useful tool to clinicians and professionals practicing in coastal and marine areas. *Magill's Medical Guide*, 2002. This reference to medical conditions and treatments updates the scientific information, current trends and developments in the field of medicine.

Aquatic Dermatology G. Angelini, D. Bonamonte, 2012-12-06. Skin diseases caused by aquatic organisms are continually on the increase owing to the great number of people who now converge on the

hydrosphere for holidays sports and professional activities Aquatic skin diseases are no longer only a seasonal affliction but can be observed at any period thanks to the tourist boom promoting aquatic holidaymaking throughout the year This book aims to contribute to the knowledge of some aquatic animals that have only developed a poisonous apparatus to protect themselves and adapt to their environment as well as of the various clinical pictures induced by different pathogenic mechanisms Besides the afflictions caused by biotoxins skin reactions to microscopic organisms present in seawater freshwater swimming pools and aquariums are described together with some non biotic forms induced by direct contact with salt and freshwater A better knowledge of the aquatic environment may help people to enjoy this enthralling habitat at lesser risk

Clinical Contact Dermatitis Gianni Angelini,Domenico Bonamonte,Caterina Foti,2021-01-30 This book is intended as a manual and offers an essential tool for practicing and occupational dermatologists for postgraduates training in dermatology and allergo immunology and for allergologists and occupational physicians Moreover the authors include information from the world literature addressing the needs of those who work in industrial fields and are concerned about the dermatological safety of products The book provides a handy update on this complex rapidly evolving research area and in particular an in depth analysis of its clinical aspects It will enable dermatologists to recognize the various clinical manifestations of the condition make a prompt diagnosis and choose the most effective treatment Contact dermatitis a vast and fascinating field of study has a high frequency of occurrence worldwide in both children and adults of both sexes and during their daily routine dermatologists invariably encounter many patients with this disease To ensure the proper management of these patients it is necessary first of all to formulate a clinical diagnosis on accurate morphological grounds since it is the most clinically polymorphic disease in dermatology and hence very demanding in terms of differential diagnosis Then to achieve properly targeted prevention for each patient it is essential to isolate the causes among the numerous etiological chemical agents present in both working and leisure time activities and environments The aim of this book is therefore two fold firstly to provide information on the various clinical features of contact dermatitis and review their differential diagnosis and secondly to provide a comprehensive etiological overview Particular attention has been paid to the methodologies and importance of patch tests and other diagnostic tools as well as to the principles of prognosis treatment and rehabilitation together with considerations on some preventive aspects underlying contact dermatitis A wealth of color clinical images as well as tables and explanatory diagrams round out the book
