Women in Nuclear Engineering Research Anne Campbell, Tonya Vitova, Charlotte Becquart ,Marta Serrano Garcia,2024-12-24 Gender inequality represents one of the major problems that affect the academic world and scientific progress At present less than 30% of researchers worldwide are women Long standing biases and gender stereotypes discourage women away from science related fields especially engineering Engineering as a whole is a historically and currently male dominated research field and ensuring that female voices and research receive equal and indeed greater visibility attention and respect is of vital importance Scientific progress is only possible and greatly accelerated if we have gender equality More women involved in a scientific field results in an expansion of the general knowledge in that field Today while a gender equal society might be seen as both beneficial and desirable it is becoming extremely important to show especially to younger generations the growing impact of female researchers in science
