Combinatorial And Geometric Group Theory Edinburgh 1993 London Mathematical Society Lecture Note Series: Combinatorial and Geometric Group Theory, Edinburgh 1993 Andrew J. Duncan,N. D. Gilbert,James Howie,1995 The ICMS Workshop on Geometric and Combinatorial Methods in Group Theory held at Heriot Watt University in 1993 brought together some of the leading research workers in the subject Some of the survey articles and contributed papers presented at the meeting are collected in this volume The former cover a number of areas of current interest and include papers by S M Gersten R I Grigorchuk P H Kropholler A Lubotzky A A Razborov and E Zelmanov The contributed articles all refereed range over a wide number of topics in combinatorial and geometric group theory and related topics The volume represents a summary of the state of knowledge of the field and as such will be indispensable to all research workers in the area   **The Theory of Infinite Soluble Groups** John C. Lennox,Derek J. S. Robinson,2004-08-19 The central concept in this monograph is that of a soluble group a group which is built up from abelian groups by repeatedly forming group extensions It covers all the major areas including finitely generated soluble groups soluble groups of finite rank modules over group rings algorithmic problems applications of cohomology and finitely presented groups whilst remaining fairly strictly within the boundaries of soluble group theory An up to date survey of the area aimed at research students and academic algebraists and group theorists it is a compendium of information that will be especially useful as a reference work for researchers in the field   *Spectral Analysis in Geometry and Number Theory* Motoko Kotani,Hisashi Naito,Tatsuya Tate,2009 This volume is an outgrowth of an international conference in honor of Toshikazu Sunada on the occasion of his sixtieth birthday The conference took place at Nagoya University Japan in 2007 Sunada s research covers a wide spectrum of spectral analysis including interactions among geometry number theory dynamical systems probability theory and mathematical physics Readers will find papers on trace formulae isospectral problems zeta functions quantum ergodicity random waves discrete geometric analysis value distribution and semiclassical analysis This volume also contains an article that presents an overview of Sunada s work in mathematics up to the age of sixty   **Exercises in Cellular Automata and Groups** Tullio Ceccherini-Silberstein,Michel Coornaert,2023-11-01 This book complements the authors monograph Cellular Automata and Groups CAG Springer Monographs in Mathematics It consists of more than 600 fully solved exercises in symbolic dynamics and geometric group theory with connections to geometry and topology ring and module theory automata theory and theoretical computer science Each solution is detailed and entirely self contained in the sense that it only requires a standard undergraduate level background in abstract algebra and general topology together with results established in CAG and in previous exercises It includes a wealth of gradually worked out examples and counterexamples presented here for the first time in textbook form Additional comments provide some historical and bibliographical information including an account of related recent developments and suggestions for further reading The eight chapter division from CAG is maintained Each chapter begins with a summary of the main definitions and results contained in the corresponding chapter

of CAG The book is suitable either for classroom or individual use Foreword by Rostislav I Grigorchuk *Visual Group Theory* Stephan Rosebrock,2024-07-04 This textbook provides an introduction to group theory starting from the basics relying on geometry to elucidate its various aspects Groups naturally manifest as symmetries of geometric shapes such as reflections and rotations The book adopts this perspective to provide a straightforward descriptive explanation supported by examples and exercises in GAP an open source computer algebra system It covers all of the key concepts of group theory including homomorphisms group operations presentations products of groups and finite abelian and solvable groups The topics include cyclic and symmetric groups dihedral orthogonal and hyperbolic groups as well as the significant notion of Cayley graphs Self contained and requiring little beyond high school mathematics this book is aimed at undergraduate courses and features numerous exercises It will also appeal to anyone interested in the geometric approach to group theory

Geometry, Topology, and Dynamics in Negative Curvature C. S. Aravinda,F. T. Farrell,J. -F. Lafont,2016-01-21 The ICM 2010 satellite conference Geometry Topology and Dynamics in Negative Curvature afforded an excellent opportunity to discuss various aspects of this fascinating interdisciplinary subject in which methods and techniques from geometry topology and dynamics often interact in novel and interesting ways Containing ten survey articles written by some of the leading experts in the field this proceedings volume provides an overview of important recent developments relating to negative curvature Topics covered include homogeneous dynamics harmonic manifolds the Atiyah Conjecture counting circles and arcs and hyperbolic buildings Each author pays particular attention to the expository aspects making the book particularly useful for graduate students and mathematicians interested in transitioning from other areas via the common theme of negative curvature 2016 MATRIX Annals Jan de Gier,Cheryl E. Praeger,Terence Tao,2018-04-10 MATRIX is Australia s international residential mathematical research institute It facilitates new collaborations and mathematical advances through intensive residential research programs each lasting 1 4 weeks This book is a scientific record of the five programs held at MATRIX in its first year 2016 Higher Structures in Geometry and Physics Winter of Disconnectedness Approximation and Optimisation Refining C Algebraic Invariants for Dynamics using KK theory Interactions between Topological Recursion Modularity Quantum Invariants and Low dimensional Topology The MATRIX Scientific Committee selected these programs based on their scientific excellence and the participation rate of high profile international participants Each program included ample unstructured time to encourage collaborative research some of the longer programs also included an embedded conference or lecture series The articles are grouped into peer reviewed contributions and other contributions The peer reviewed articles present original results or reviews on selected topics related to the MATRIX program the remaining contributions are predominantly lecture notes based on talks or activities at MATRIX Extended Abstracts Fall 2012 Juan González-Meneses,Martin Lustig,Enric Ventura,2014-07-24 This volume features seventeen extended conference abstracts corresponding to selected talks given by participants at the CRM research program Automorphisms of Free Groups

Algorithms Geometry and Dynamics which took place at the Centre de Recerca Matem tica in Barcelona in fall 2012 Most of them are short articles giving preliminary presentations of new results not yet published in regular research journals The articles are the result from a direct collaboration among active researchers in the area after working in a dynamic and productive atmosphere The book is intended for established researchers in the area of Group Theory as well as for PhD and postdoc students who wish to learn more about the latest advances in this active area of research *The Bulletin of Mathematics Books* ,1992 **Kokuritsu Kokkai Toshokan shozō kagaku gijutsu kankei Ōbun kaigiroku mokuroku** Kokuritsu Kokkai Toshokan (Japan),1997 **Geometric and Cohomological Methods in Group Theory** Martin R. Kropholler,Graham A. Niblo,Ralph Stöhr,1998-05-14 This volume reflects the fruitful connections between group theory and topology It contains articles on cohomology representation theory geometric and combinatorial group theory Some of the world s best known figures in this very active area of mathematics have made contributions including substantial articles from Ol shanskii Mikhajlovskii Carlson Benson Linnell Wilson and Grigorchuk which will be valuable reference works for some years to come Pure mathematicians working in the fields of algebra topology and their interactions will find this book of great interest *The Bounded and Precise Word Problems for Presentations of Groups* S. V. Ivanov,2020-05-13 The author introduces and studies the bounded word problem and the precise word problem for groups given by means of generators and defining relations For example for every finitely presented group the bounded word problem is in NP i e it can be solved in nondeterministic polynomial time and the precise word problem is in PSPACE i e it can be solved in polynomial space The main technical result of the paper states that for certain finite presentations of groups which include the Baumslag Solitar one relator groups and free products of cyclic groups the bounded word problem and the precise word problem can be solved in polylogarithmic space As consequences of developed techniques that can be described as calculus of brackets the author obtains polylogarithmic space bounds for the computational complexity of the diagram problem for free groups for the width problem for elements of free groups and for computation of the area defined by polygonal singular closed curves in the plane The author also obtains polynomial time bounds for these problems 国立国会図書館所蔵科学技術関係欧文会議録目録 ,1997 **Maximal Cohen–Macaulay Modules and Tate Cohomology** Ragnar-Olaf Buchweitz,2021-12-16 This book is a lightly edited version of the unpublished manuscript Maximal Cohen Macaulay modules and Tate cohomology over Gorenstein rings by Ragnar Olaf Buchweitz The central objects of study are maximal Cohen Macaulay modules over not necessarily commutative Gorenstein rings The main result is that the stable category of maximal Cohen Macaulay modules over a Gorenstein ring is equivalent to

the stable derived category and also to the homotopy category of acyclic complexes of projective modules This assimilates and significantly extends earlier work of Eisenbud on hypersurface singularities There is also an extensive discussion of duality phenomena in stable derived categories extending Tate duality on cohomology of finite groups Another noteworthy aspect is an extension of the classical BGG correspondence to super algebras There are numerous examples that illustrate these ideas The text includes a survey of developments subsequent to and connected with Buchweitz s manuscript □□□□□ □□□□□□□□□□□□□□□ □□□□□□ (Japan),1997 Journal of the Korean Mathematical Society ,1998 *Lie Groups and Lie Algebras* B.P. Komrakov,I.S. Krasil'shchik,G.L. Litvinov,A.B. Sossinsky,2012-12-06 This collection contains papers conceptually related to the classical ideas of Sophus Lie i e to Lie groups and Lie algebras Obviously it is impos sible to embrace all such topics in a book of reasonable size The contents of this one reflect the scientific interests of those authors whose activities to some extent at least are associated with the International Sophus Lie Center We have divided the book into five parts in accordance with the basic topics of the papers although it can be easily seen that some of them may be attributed to several parts simultaneously The first part quantum mathematics combines the papers related to the methods generated by the concepts of quantization and quantum group The second part is devoted to the theory of hypergroups and Lie hypergroups which is one of the most important generalizations of the classical concept of locally compact group and of Lie group A natural harmonic analysis arises on hypergroups while any abstract transformation of Fourier type is gen erated by some hypergroup commutative or not Part III contains papers on the geometry of homogeneous spaces Lie algebras and Lie superalgebras Classical problems of the representation theory for Lie groups as well as for topological groups and semigroups are discussed in the papers of Part IV Finally the last part of the collection relates to applications of the ideas of Sophus Lie to differential equations
