## **Combine Multiples:**

**Equity Valuation Using Multiples** Andreas Schreiner, 2009-04-15 Accounting based market multiples are the most common technique in equity valuation Multiples are used in research reports and stock recommendations of both buy side and sell side analysts in fairness opinions and pitch books of investment bankers or at road shows of firms seeking an IPO Even in cases where the value of a corporation is primarily determined with discounted cash flow multiples such as P/E or market to book play the important role of providing a second opinion Multiples thus form an important basis of investment and transaction decisions of various types of investors including corporate executives hedge funds institutional investors private equity firms and also private investors In spite of their prevalent usage in practice not so much theoretical background is provided to guide the practical application of multiples The literature on corporate valuation gives only sparse evidence on how to apply multiples or on why individual multiples or comparable firms should be selected in a particular context
