## **Full House The Spread Of Excellence From Plato To Darwin:**

Full House Stephen Jay Gould, 1996 Few would question the truism that humankind is the crowning achievement of evolution that the defining thrust of life's history yields progress over time from the primitive and simple to the more advanced and complex that the disappearance of 400 hitting in baseball is a fact to be bemoaned or that identifying an existing trend can be helpful in making important life decisions Few that is except Stephen Jay Gould who in his new book Full House The Spread of Excellence from Plato to Darwin proves that all of these intuitive truths are in fact wrong All of these mistaken beliefs arise out of the same analytical flaw in our reasoning our Platonic tendency to reduce a broad spectrum to a single pinpointed essence says Gould This way of thinking allows us to confirm our most ingrained biases that humans are the supreme being on this planet that all things are inherently driven to become more complex and that almost any subject can be expressed and understood in terms of an average In Full House Gould shows why a more accurate way of understanding our world and the history of life is to look at a given subject within its own context to see it as a part of a spectrum of variation rather than as an isolated thing and then to reconceptualize trends as expansion or contraction of this full house of variation and not as the progress or degeneration of an average value or single thing When approached in such a way the disappearance of 400 hitting becomes a cause for celebration signaling not a decline in greatness but instead an improvement in the overall level of play in baseball trends become subject to suspicion and too often only a tool of those seeking to advance a particular agenda and the Age of Man a claim rooted in hubris not in fact more accurately becomes the Age of Bacteria The traditional mode of thinking has led us to draw many conclusions that don't make satisfying sense says Gould It tells us that 400 hitting has disappeared because batters have gotten worse but how can that be true when record performances have improved in almost any athletic activity In a personal eureka Gould realized that we were looking at the picture backward and that a simple conceptual inversion would resolve a number of the paradoxes of the conventional view While Full House deftly reveals the shortcomings of the popular reasoning we apply to everyday life situations Gould also explores his beloved realm of natural history as well Whether debunking the myth of the successful evolution of the horse he grants that the story still deserves distinction but as the icon of evolutionary failure presenting evidence that the vaunted progress of life is really random motion away from simple beginnings not directed impetus toward complexity or relegating the kingdoms of Animalia and Plantae to their proper positions on the genealogical chart for all of life as mere twigs on one of the three bushes Full House asks nothing less than that we reconceptualize our view of life in a fundamental way From the Hardcover edition

Full House Stephen Jay Gould, 1996-09-01 Few would question the truism that humankind is the crowning achievement of evolution that the defining thrust of life's history yields progress over time from the primitive and simple to the more advanced and complex that the disappearance of 400 hitting in baseball is a fact to be bemoaned or that identifying an existing trend can be helpful in making important life decisions Few that is except Stephen Jay Gould who in

his new book *Full House: The Spread of Excellence from Plato to Darwin* proves that all of these intuitive truths are in fact wrong. All of these mistaken beliefs arise out of the same analytical flaw in our reasoning: our Platonic tendency to reduce a broad spectrum to a single pinpointed essence, says Gould. This way of thinking allows us to confirm our most ingrained biases that humans are the supreme being on this planet, that all things are inherently driven to become more complex, and that almost any subject can be expressed and understood in terms of an average. In *Full House*, Gould shows why a more accurate way of understanding our world and the history of life is to look at a given subject within its own context to see it as a part of a spectrum of variation rather than as an isolated thing, and then to reconceptualize trends as expansion or contraction of this full house of variation and not as the progress or degeneration of an average value or single thing. When approached in such a way, the disappearance of 400 hitting becomes a cause for celebration, signaling not a decline in greatness but instead an improvement in the overall level of play. In baseball trends become subject to suspicion and too often only a tool of those seeking to advance a particular agenda. And the Age of Man, a claim rooted in hubris, not in fact more accurately becomes the Age of Bacteria. The traditional mode of thinking has led us to draw many conclusions that don't make satisfying sense, says Gould. It tells us that 400 hitting has disappeared because batters have gotten worse, but how can that be true when record performances have improved in almost any athletic activity? In a personal eureka, Gould realized that we were looking at the picture backward and that a simple conceptual inversion would resolve a number of the paradoxes of the conventional view. While *Full House* deftly reveals the shortcomings of the popular reasoning we apply to everyday life situations, Gould also explores his beloved realm of natural history as well. Whether debunking the myth of the successful evolution of the horse, he grants that the story still deserves distinction, but as the icon of evolutionary failure, presenting evidence that the vaunted progress of life is really random motion away from simple beginnings, not directed impetus toward complexity or relegating the kingdoms of Animalia and Plantae to their proper positions on the genealogical chart for all of life as mere twigs on one of the three bushes. *Full House* asks nothing less than that we reconceptualize our view of life in a fundamental way. From the Hardcover edition.

**How We Believe** Michael Shermer, 2003-10-01 A new edition covering the latest scientific research on how the brain makes us believers or skeptics. Recent polls report that 96 percent of Americans believe in God and 73 percent believe that angels regularly visit Earth. Why is this? Why, despite the rise of science, technology, and secular education, are people turning to religion in greater numbers than ever before? Why do people believe in God at all? These provocative questions lie at the heart of *How We Believe*, an illuminating study of God, faith, and religion. Bestselling author Michael Shermer offers fresh and often startling insights into age-old questions, including how and why humans put their faith in a higher power, even in the face of scientific skepticism. Shermer has updated the book to explore the latest research.

**Holistic Darwinism** Peter Corning, 2010-08-15 In recent years evolutionary theorists have come to recognize that the reductionist individualist gene centered approach to evolution cannot sufficiently account for the emergence of complex biological systems over time Peter A Corning has been at the forefront of a new generation of complexity theorists who have been working to reshape the foundations of evolutionary theory Well known for his Synergism Hypothesis a theory of complexity in evolution that assigns a key causal role to various forms of functional synergy Corning puts this theory into a much broader framework in Holistic Darwinism addressing many of the issues and concepts associated with the evolution of complex systems Corning's paradigm embraces and integrates many related theoretical developments of recent years from multilevel selection theory to niche construction theory gene culture coevolution theory and theories of self organization Offering new approaches to thermodynamics information theory and economic analysis Corning suggests how all of these domains can be brought firmly within what he characterizes as a post neo Darwinian evolutionary synthesis

*Process, Reality, and the Power of Symbols* M. Code, 2007-06-28 Following A N Whitehead this book takes up the principal challenge facing a natural philosopher who wishes to engage with Nature while rescuing both Life and Thought from materialistic approaches which rob them of their quicknesses Selecting certain insights and intuitions from the writings of Peirce Coleridge Deleuze and Nietzsche the author proffers a remedy for the pervasive nihilism of the moderns which illustrates Deleuze's suggestion that philosophy should be imaged as a dynamic collage that is forever in the making

**International Handbook of Historical Archaeology** Teresita Majewski, David Gaimster, 2009-06-07 In studying the past archaeologists have focused on the material remains of our ancestors Prehistorians generally have only artifacts to study and rely on the diverse material record for their understanding of past societies and their behavior Those involved in studying historically documented cultures not only have extensive material remains but also contemporary texts images and a range of investigative technologies to enable them to build a broader and more reflexive picture of how past societies communities and individuals operated and behaved Increasingly historical archaeology refers not to a particular period place or a method but rather an approach that interrogates the tensions between artifacts and texts

irrespective of context In short historical archaeology provides direct evidence for how humans have shaped the world we live in today Historical archaeology is a branch of global archaeology that has grown in the last 40 years from its North American base into an increasingly global community of archaeologists each studying their area of the world in a historical context Where historical archaeology started as part of the study of the post Columbian societies of the United States and Canada it has now expanded to interface with the post medieval archaeologies of Europe and the diverse post imperial experiences of Africa Latin America and Australasia The 36 essays in the International Handbook of Historical Archaeology have been specially commissioned from the leading researchers in their fields creating a wide ranging digest of the increasingly global field of historical archaeology The volume is divided into two sections the first reviewing the key themes issues and approaches of historical archaeology today and the second containing a series of case studies charting the development and current state of historical archaeological practice around the world This key reference work captures the energy and diversity of this global discipline today

*The Normativity of the Natural* Mark J. Cherry, 2009-05-27 Western philosophy has long nurtured the hope to resolve moral controversies through reason thereby to secure moral direction and human meaning without the need for a defining encounter with God or the transcendent The expectation is for a moral rationality that is universal and able adequately to frame and guide the moral life Moral and cultural unity was sought through philosophical reflection on human nature and the basic goods of a properly nurtured and virtuous life that is through appeal to what has come to be called the natural law The natural law addresses permissible moral choice through objective understandings of human nature and human goods Persons are obligated to act in ways that are compatible with creating and integrating the basic human goods into their lives and the lives of others Such goods provide the basis for practical reasoning about virtuous choices and immediate reasons for action The goal is the making of rational choices in the pursuit of a virtuous flourishing human life Natural law theorists have argued extensively against human cloning abortion and same gender marriage Yet whose assumptions regarding human nature should guide our understanding of the basic goods that mark the full flourishing human life Moreover why should nature even human nature be thought of as a moral boundary beyond which one must not trespass Persons may wish actively to direct human evolution utilizing the tools of both imagination and biotechnology Perhaps nature is simply a challenge to be addressed overcome and set aside This volume is a critical exploration of natural law theory

**To Make the World Intelligible** Franklin M. Harold, 2017-03-05 To Make the World Intelligible A Scientist's Journey is both a book about a life of science and about the science of life In it Franklin M Harold shares the story of his life as a German immigrant who lived in the Middle East before coming to America and finding his place in life as a scientist But Harold's story does not stand in isolation It is set against the heyday of biochemistry and molecular biology a time when the staid science of biology was

being transformed from a descriptive study of animals and plants into an intense inquiry into how living things work at the level of cells and molecules Harold then builds on this backdrop by sharing some of his research and that of his mentor and Nobel Prizewinner Peter Mitchell as well as his insights and reflections on life as a phenomenon of nature The accessible comprehensive and yet lyrical way that Harold accomplishes this is a testament to his belief that a scientist's *raison d'être* is to make the world intelligible

**For the Rock Record** Jill S. Schneiderman, Warren D. Allmon, 2009 Creationism began with the fossil record and there it shall end Before Darwin the geological strata with their accompanying fossils formed the first geological theory of life on earth creationism coupled to flood geology It was Darwin who stood that theory on its head and showed that in fact these same fossils could be used to support his new theory of evolution by natural selection Ever since Darwin geology has unequivocally supported evolution and not creationism and yet today Intelligent Design thrives in popular culture Here at last we have a definitive collection of world class geologists and paleontologists who systematically demonstrate precisely why geology destroys all design arguments and reveals instead a deep and rich history of life on earth A perfect companion to all science courses Michael Shermer publisher of *Skeptic* magazine and author of *Why Darwin Matters* An excellent contribution on a vital issue which concerns not only geologists but all who value any science Mark Isaak author of *The Counter Creationism Handbook*

colonial pollution of a pristine ecology the impacts of a colonial invasion upon an indigenous population the meeting of cultures with different values and physical aspects Other essays view Bradbury via the lens of post colonialism drawing parallels between such works as *The Martian Chronicles* and real life colonialism and its effects Another essay views Bradbury sociologically analyzing border issues in his 1947 New Yorker story *I See You* Never written long before the issue of Mexican deportees appeared on the American literary horizon From the scientific side four essays by astronomers document how Bradbury formed the minds of many budding scientists with his vision On August 22 2012 the Martian landing site of the Curiosity rover in the Gale Crater was named Bradbury This honor shows that Bradbury forms a significant link between the worlds of fiction and planetary science      *The Evolution of Biological Information* Christoph Adami, 2024-01-16

Why information is the unifying principle that allows us to understand the evolution of complexity in nature More than 150 years after Darwin's revolutionary *On the Origin of Species* we are still attempting to understand and explain the amazing complexity of life Although we now know how evolution proceeds to build complexity from simple ingredients quantifying this complexity is still a difficult undertaking In this book Christoph Adami offers a new perspective on Darwinian evolution by viewing it through the lens of information theory This novel theoretical stance sheds light on such matters as how viruses evolve drug resistance how cells evolve to communicate and how intelligence evolves By this account information emerges as the central unifying principle behind all of biology allowing us to think about the origin of life on Earth and elsewhere in a systematic manner Adami a leader in the field of computational biology first provides an accessible introduction to the information theory of biomolecules and then shows how to apply these tools to measure information stored in genetic sequences and proteins After outlining the experimental evidence of the evolution of information in both bacteria and digital organisms he describes the evolution of robustness in viruses the cooperation among cells animals and people and the evolution of brains and intelligence Building on extensive prior work in bacterial and digital evolution Adami establishes that expanding on Dobzhansky's famous remark nothing in biology makes sense except in the light of information Understanding that information is the foundation of all life he argues allows us to see beyond the particulars of our way of life to glimpse what life might be like in other worlds      **Botanists and Zoologists** Dean Miller, 2014-01-01 In this volume a breakdown of the life and work of some of history's pioneers in the study of plants and animals are thoroughly explored It provides excellent biographical sketches for trailblazers in the sciences Articles are devoted to specific scientists covering their contributions to their field specifically addressing how their research discoveries and inventions impacted human understanding and experience This volume covers names from around the world and throughout the centuries with a chapter specifically devoted to the top scientific contributors of the 21st century      [Focus On: 100 Most Popular American Agnostics](#)
