Fulton Intersection Theory:

Intersection Theory William Fulton, 2012-12-06 From the ancient origins of algebraic geometry in the solutions of polynomial equations through the triumphs of algebraic geometry during the last two centuries intersection theory has played a central role The aim of this book is to develop the foundations of this theory and to indicate the range of classical and modern applications Although a comprehensive history of this vast subject is not attempted the author points out some of the striking early appearances of the ideas of intersection theory A suggested prerequisite for the reading of this book is a first course in algebraic geometry Fulton's introduction to intersection theory has been well used for more than 10 years It is still the only existing complete modern treatise of the subject and received the Steele Prize for best exposition in August 1996

Intersection Theory William Fulton, 1984 *Introduction to Intersection Theory in Algebraic Geometry* William Fulton, 1984 Introduces some of the main ideas of modern intersection theory traces their origins in classical geometry and sketches a few typical applications Suitable for graduate students in mathematics this book describes the construction and computation of intersection products by means of the geometry of normal cones **Intersection Theory W.**

Fulton, 2014-01-15 Intersection Theory William Fulton, 1984 From the ancient origins of algebraic geometry in the solution of polynomial equations through the triumphs of algebraic geometry during the last two centuries intersection theory has played a central role Since its role in foundational crises has been no less prominent the lack of a complete modern treatise on intersection theory has been something of an embarrassment The aim of this book is to develop the foundations of intersection theory and to indicate the range of classical and modern applications Although a comprehensive history of this vast subject is not attempted we have tried to point out some of the striking early appearances of the ideas of intersection theory Recent improvements in our understanding not only yield a stronger and more useful theory than previously available but also make it possible to develop the subject from the beginning with fewer prerequisites from algebra and algebraic geometry It is hoped that the basic text can be read by one equipped with a first course in algebraic geometry with occasional use of the two appendices Some of the examples and a few of the later sections require more specialized knowledge The text is designed so that one who understands the constructions and grants the main theorems of the first six chapters can read other chapters separately Frequent parenthetical references to previous sections are included for such readers The summaries which begin each chapter should facilitate use as a reference **Introduction to**

Intersection Theory on Algebraic Geometry William Fulton, 1996 **Recent Progress in Intersection Theory** Geir Ellingsrud, William Fulton, Angelo Vistoli, 2000-02-25 The articles in this volume are an outgrowth of an International Conference in Intersection Theory that took place in Bologna Italy December 1997 In a somewhat unorthodox format aimed at both the mathematical community as well as summer school students talks were research oriented as well as partly expository There were four series of expository talks by the following people M Brion University of Grenoble on Equivariant Chow

groups and applications H Flenner University of Bochum on Joins and intersections E M Friedlander Northwestern University on Intersection products for spaces of algebraic cycles R Laterveer University of Strasbourg on Bigraded Chow co homology Four introductory papers cover the following topics and bring the reader to the forefront of research 1 the excess intersection algorithm of Stuckrad and Vogel combined with the deformation to the normal cone together with many of its geometric applications 2 new and very important homotopy theory techniques that are now used in intersection theory 3 the Bloch Beilinson filtration and the theory of motives 4 algebraic stacks the modern language of moduli theory Other research articles concern such active fields as stable maps and Gromov Witten invariants deformation theory of complex varieties and others Organizers of the conference were Rudiger Achilles Mirella Manaresi and Angelo Vistoli all from the University of Bologna the scientific committee consisted of Geir Ellingsrud University of Oslo William Fulton University of Michigan at Ann Arbor and Angelo Vistoli The conference was financed by the European Union contract no

Introduction to Arakelov Theory Serge Lang, 2012-12-06

Arakelov introduced a component at infinity in arithmetic considerations thus giving rise to global theorems similar to those of the theory of surfaces but in an arithmetic context over the ring of integers of a number field The book gives an introduction to this theory including the analogues of the Hodge Index Theorem the Arakelov adjunction formula and the Faltings Riemann Roch theorem The book is intended for second year graduate students and researchers in the field who want a systematic introduction to the subject The residue theorem which forms the basis for the adjunction formula is proved by a direct method due to Kunz and Waldi The Faltings Riemann Roch theorem is proved without assumptions of semistability An effort has been made to include all necessary details and as complete references as possible especially to needed facts of analysis for Green's functions and the Faltings metrics

Representation Theories and Algebraic Geometry A. Broer, 2013-03-09

The 12 lectures presented in Representation Theories and Algebraic Geometry focus on the very rich and powerful interplay between algebraic geometry and the representation theories of various modern mathematical structures such as reductive groups quantum groups Hecke algebras restricted Lie algebras and their companions This interplay has been extensively exploited during recent years resulting in great progress in these representation theories Conversely a great stimulus has been given to the development of such geometric theories as D modules perverse sheaves and equivariant intersection cohomology The range of topics covered is wide from equivariant Chow groups decomposition classes and Schubert varieties multiplicity free actions convolution algebras standard monomial theory and canonical bases to annihilators of quantum Verma modules modular representation theory of Lie algebras and combinatorics of representation categories of Harish Chandra modules

Stratified Morse Theory Mark Goresky, Robert MacPherson, 2012-12-06

Due to the lack of proper bibliographical sources stratification theory

seems to be a mysterious subject in contemporary mathematics This book contains a complete and elementary survey including an extended bibliography on stratification theory including its historical development Some further important topics in the book are Morse theory singularities transversality theory complex analytic varieties Lefschetz theorems connectivity theorems intersection homology complements of affine subspaces and combinatorics The book is designed for all interested students or professionals in this area

Polytopes, Rings, and K-Theory Winfried Bruns, Joseph Gubeladze, 2009-06-12 This book examines interactions of polyhedral discrete geometry and algebra What makes this book unique is the presentation of several central results in all three areas of the exposition from discrete geometry to commutative algebra and K theory

Weil Conjectures, Perverse Sheaves and l-adic Fourier Transform Reinhardt Kiehl, Rainer Weissauer, 2013-03-14 In this book the authors describe the important generalization of the original Weil conjectures as given by P Deligne in his fundamental paper La conjecture de Weil II The authors follow the important and beautiful methods of Laumon and Brylinski which lead to a simplification of Deligne s theory Deligne s work is closely related to the sheaf theoretic theory of perverse sheaves In this framework Deligne s results on global weights and his notion of purity of complexes obtain a satisfactory and final form Therefore the authors include the complete theory of middle perverse sheaves In this part the l adic Fourier transform is introduced as a technique providing natural and simple proofs To round things off there are three chapters with significant applications of these theories

Frobenius Manifolds, Quantum Cohomology, and Moduli Spaces I. Manin, 1999 This is the first monograph dedicated to the systematic exposition of the whole variety of topics related to quantum cohomology The subject first originated in theoretical physics quantum string theory and has continued to develop extensively over the last decade The author s approach to quantum cohomology is based on the notion of the Frobenius manifold The first part of the book is devoted to this notion and its extensive interconnections with algebraic formalism of operads differential equations perturbations and geometry In the second part of the book the author describes the construction of quantum cohomology and reviews the algebraic geometry mechanisms involved in this construction intersection and deformation theory of Deligne Artin and Mumford stacks Yuri Manin is currently the director of the Max Planck Institut f r Mathematik in Bonn Germany He has authored and coauthored 10 monographs and almost 200 research articles in algebraic geometry number theory mathematical physics history of culture and psycholinguistics Manin s books such as Cubic Forms Algebra Geometry and Arithmetic 1974 A Course in Mathematical Logic 1977 Gauge Field Theory and Complex Geometry 1988 Elementary Particles Mathematics Physics and Philosophy 1989 with I Yu Kobzarev Topics in Non commutative Geometry 1991 and Methods of Homological Algebra 1996 with S I Gelfand secured for him solid recognition as an excellent expositor Undoubtedly the present book will serve mathematicians for many years to come

Vector Bundles and Representation Theory Steven Dale Cutkosky, 2003 This volume contains 13 papers from the conference on Hilbert Schemes Vector Bundles

Representations of Finite Dimensional Algebras and Related Topics in Lie Theory and Geometry Vlastimil Dlab, Claus Michael Ringel, These proceedings are from the Tenth International Conference on Representations of Algebras and Related Topics ICRA X held at The Fields Institute In addition to the traditional instructional workshop preceding the conference there were also workshops on Commutative Algebra Algebraic Geometry and Representation Theory Finite Dimensional Algebras Algebraic Groups and Lie Theory and Quantum Groups and Hall Algebras These workshops reflect the latest developments and the increasing interest in areas that are closely related to the representation theory of finite dimensional associative algebras Although these workshops were organized separately their topics are strongly interrelated The workshop on Commutative Algebra Algebraic Geometry and Representation Theory surveyed various recently established connections such as those pertaining to the classification of vector bundles or Cohen Macaulay modules over Noetherian rings coherent sheaves on curves or ideals in Weyl algebras In addition methods from algebraic geometry or commutative algebra relating to quiver representations and varieties of modules were presented The workshop on Finite Dimensional Algebras Algebraic Groups and Lie Theory surveyed developments in finite dimensional algebras and infinite dimensional Lie theory especially as the two areas interact and may have future interactions The workshop on Quantum Groups and Hall Algebras dealt with the different approaches of using the representation theory of quivers and species in order to construct quantum groups working either over finite fields or over the complex numbers In particular these proceedings contain a quite detailed outline of the use of perverse sheaves in order to obtain canonical bases The book is recommended for graduate students and researchers in algebra and geometry
