## Function Spaces 1 Volume 1 Function Spaces 1 Volume 1:

**Function Spaces, 1** Luboš Pick, Alois Kufner, Oldřich John, Svatopluk Fučík, 2012-12-19 This is the first part of the second revised and extended edition of the well established book Function Spaces by Alois Kufner Oldřich John and Svatopluk Fučík. Like the first edition this monograph is an introduction to function spaces defined in terms of differentiability and integrability classes. It provides a catalogue of various spaces and benefits as a handbook for those who use function spaces in their research or lecture courses. This first volume is devoted to the study of function spaces based on intrinsic properties of a function such as its size, continuity, smoothness, various forms of a control over the mean oscillation and so on. The second volume will be dedicated to the study of function spaces of Sobolev type in which the key notion is the weak derivative of a function of several variables.

Theory of Function Spaces Hans Triebel, 1983

Function Spaces A. Kufner, Oldřich John, Svatopluk Fučík, 1977-12-31

Kniha popisuje teorii reálných a komplexních prostorů funkcí a dává mnoho příkladů a výsledků. Včetně rozdílných rovnic. Je rozdělena do tří částí: první pojednává o funkcích v normovaných prostorech Banachových a Hilbertových, druhé o operátorech a třetí o integrovatelných funkcích a o prostorech integrace. Autor Vítěslav Stepanek popisuje Sobolevovy a Orliczovy prostory, dále prostory anizotropní, Nikolskoho a Slobodeckého.

Function Spaces, Theory and Applications Ilia Binder, Damir Kinzebulatov, Javad Mashreghi, 2023-12-11

The focus program on Analytic Function Spaces and their Applications took place at Fields Institute from July 1st to December 31st 2021. Hilbert spaces of analytic functions form one of the pillars of complex analysis. These spaces have a rich structure and for more than a century have been studied by many prominent mathematicians. They also have several essential applications in other fields of mathematics and engineering, e.g. robust control, engineering, signal and image processing, and theory of communication. The most important Hilbert space of analytic functions is the Hardy class  $H^2$ . However, its close cousins, e.g. the Bergman space  $A^2$ , the Dirichlet space  $\mathcal{D}$ , the model subspaces  $K_t$  and the de Branges-Rovnyak spaces  $H_b$  have also been the center of attention in the past two decades. Studying the Hilbert spaces of analytic functions and the operators acting on them, as well as their applications in other parts of mathematics or engineering, were the main subjects of this program. During the program, the world leading experts on function spaces gathered and discussed the new achievements and future venues of research on analytic function spaces, their operators, and their applications in other domains. With more than 250 hours of lectures by prominent mathematicians, a wide variety of topics were covered. More explicitly, there were mini-courses and workshops on Hardy Spaces, Dirichlet Spaces, Bergman Spaces, Model Spaces, Interpolation and Sampling, Riesz Bases, Frames and Signal Processing, Bounded Mean Oscillation, de Branges-Rovnyak Spaces, Operators on Function Spaces, Truncated Toeplitz Operators, Blaschke Products and Inner Functions, Discrete and Continuous Semigroups of Composition Operators, The Corona Problem, Non-commutative Function Theory, Drury-Arveson Space and Convergence of Scattering Data, and Non-linear Fourier Transform. At the end of each week, there was a high profile colloquium talk on the current topic. The

program also contained two semester long advanced courses on Schramm Loewner Evolution and Lattice Models and Reproducing Kernel Hilbert Space of Analytic Functions The current volume features a more detailed version of some of the talks presented during the program
