## **Functional Foods Enhancing Animal Products:**

Milk and Dairy Products as Functional Foods Ara Kanekanian, 2014-04-09 There continues to be strong interest within the food industry in developing new products which offer functional health benefits to the consumer. The premium prices that can be charged make these added value products lucrative for manufacturers and they are also commercially popular. Dairy foods are central to this sector; they are good delivery systems for functional foods: yoghurts, milk drinks, spreads, and are also rich in compounds which can be extracted and used as functional ingredients in other food types. Milk and Dairy Products as Functional Foods draws together a wealth of information regarding the functional health benefits of milk and dairy products. It examines the physiological role and the claimed health effects of dairy constituents such as proteins, bioactive peptides, conjugated linoleic acid (CLA), omega 3 fatty acids, vitamin D, and calcium. These constituents have been shown to be, for example, anticarcinogenic, anti-inflammatory, antihypertensive, hypocholesterolemic, immune modulating, and antimicrobial. This book examines the evidence for these claims and investigates practical approaches for utilising these attributes. The book is aimed at dairy scientists and technologists in industry and academia, general food scientists and technologists, microbiologists, and nutritionists, together with all those involved in the formulation and production of functional food products.

Functional Foods, Nutraceuticals and Natural Products Dhiraj A. Vatter, Vatsala Maitin, 2015-10-06 Bioactive ingredients in foods and their pharmacological and health effects. Functional foods and bioactives of microbial, plant, and animal origin, including probiotics, herbs, spices, vegetables, specialty fruits, seafood, and milk components. Impact on the microbiome, emerging metabolic pathways, and prevention of chronic and infectious diseases. Techniques for functional food development and evaluation. Regulatory and safety considerations. This volume presents basic and advanced technical information on the sources, mechanisms, and safety of food bioactives in the etiology and prevention of chronic and infectious diseases. In this context, it offers details useful not only for understanding but also improving the functionality of foods. It reviews advances in multiple phytochemicals and food ingredients known for positive effects on human physiology, including interactions with the human microbiome. Metabolomic and proteomic techniques are explored as ways of improving the understanding of mechanisms of action and increasing the therapeutic effectiveness of selected food ingredients. Special attention is given to chemistry, molecular structure, and pharmacological effects of bioactive ingredients. Bioactives from a wide range of foods are investigated, including pro and prebiotics, fungi, yeasts, herbs, spices, fruits, vegetables, seafood, and many more. The text provides systematic information needed to develop and validate commercial products incorporating functional ingredients.

Functional Foods Muhammad Sajid Arshad, Muhammad Haseeb Ahmad, 2021-11-10 The phytochemicals present in functional foods play a vital role in boosting immunity and promoting health. This book provides a comprehensive overview of the importance of functional foods and antioxidants and their scavenging activity for preventing various health-related disorders. This book also covers the therapeutic and medicinal potential of various bioactive

compounds for a healthy lifestyle as well as examines different products containing functional ingredients that demonstrate health promoting potential

**Functional Food Product Development** Jim Smith, Edward Charter, 2011-03-08 According to an August 2009 report from PricewaterhouseCoopers the United States market for functional foods in 2007 was US 27 billion Forecasts of growth range from between 8.5% and 20% per year or about four times that of the food industry in general Global demand by 2013 is expected to be about 100 billion With this demand for new products comes a demand for product development and supporting literature for that purpose There is a wealth of research and development in this area and great scope for commercialization and this book provides a much needed review of important opportunities for new products written by authors with in depth knowledge of as yet unfulfilled health related needs This book addresses functional food product development from a number of perspectives the process itself health research that may provide opportunities idea creation regulation and processes and ingredients It also features case studies that illustrate real product development and commercialization histories Written for food scientists and technologists this book presents practical information for use in functional food product development It is an essential resource for practitioners in functional food companies and food technology centres and is also of interest to researchers and students of food science Key features A comprehensive review of the latest opportunities in this commercially important sector of the food industry Includes chapters highlighting functional food opportunities for specific health issues such as obesity immunity brain health heart disease and the development of children New technologies of relevance to functional foods are also addressed such as emulsion delivery systems and nanoencapsulation Includes chapters on product design and the use of functional ingredients such as antioxidants probiotics and prebiotics as well as functional ingredients from plant and dairy sources Specific examples of taking products to market are provided in the form of case studies e.g. microalgae functional ingredients Part of the Functional Food Science and Technology book series Series Editor Fereidoon Shahidi

**Animals as Biotechnology** Richard Twine, 2010 In *Animals as Biotechnology* sociologist Richard Twine places the question of human animal relations at the heart of sustainability and climate change debates The book is shaped by the emergence of two contradictory trends within our approach to nonhuman animals the biotechnological turn in animal sciences which aims to increase the efficiency and profitability of meat and dairy production and the emerging field of critical animal studies mostly in the humanities and social sciences which works to question the nature of our relations with other animals The first part of the book focuses on ethics examining critically the dominant paradigms of bioethics and power relations between human and non human The second part considers animal biotechnology and political economy examining commercialisation and regulation The final part of the book centres on discussions of sustainability limits and an examination of the prospects for animal ethics if biotechnology becomes part of the dominant agricultural paradigm Twine concludes by considering whether growing calls to reduce our consumption of meat dairy products in the face of climate change threats are in fact complicit with an anthropocentric understanding of

sustainability and that what is needed is a more fundamental ethical and political questioning of relations and distinctions between humans animals and nature

**Animal Sourced Foods for Developing Economies** Muhammad Issa Khan,Aysha Sameen,2018-12-21 Animal products are good source of disposable income for many small farmers in developing countries In fact livestock are often the most important cash crop in many small holder mixed farming systems Livestock ownership currently supports and sustains the livelihoods of rural poor who depend partially or fully on livestock for their income and or subsistence Human population growth increasing urbanization and rising incomes are predicted to double the demand for and production of livestock products in the developing countries over the next twenty years The future holds great opportunities for animal production in developing countries Animal Sourced Foods for Developing Economies addresses five major issues 1 Food safety and nutritional status in developing world 2 the contribution of animal origin foods in human health 3 Production processes of animal foods along with their preservation strategies 4 functional outcomes of animal derived foods and finally 5 strategies issues and policies to promote animal origin food consumption Animal sourced food contain high biological value protein and important micronutrients required for optimal body functioning but are regarded as sources of fat that contribute to the intake of total and saturated fatty acids in diet The quality of protein source has a direct influence on protein digestibility as a greater proportion of higher quality proteins is absorbed and becomes available for bodily functions Animal foods has high quantity and quality of protein that includes a full complement of the essential amino acids in the right proportion Land availability limits the expansion of livestock numbers in extensive production systems in most regions and the bulk of the increase in livestock production will come from increased productivity through intensification and a wider adoption of existing and new production and marketing technologies The significant changes in the global consumption and demand for animal source foods along with increasing pressures on resources are having some important implications for the principal production systems In this book contributors critically analyze and describe different aspects of animal s origin foods Each chapter is dedicated to a specific type of food from animal source its nutritional significance preservation techniques processed products safety and quality aspects on conceptual framework Special attention is given to explain current food safety scenario in developing countries and contribution of animal derived food in their dietary intake Existing challenges regarding production processing and promotion of animal s origin foods are also addressed with possible solutions and strengthening approaches

**Functional Foods** I. Goldberg,2012-12-06 Accuse not Nature She has done her part Do Thou but Thine Milton Paradise Lost 1667 The concept that nature imparted to foods a health giving and curative function is not new Herbal teas and remedies have been used for centuries and continue in use in many parts of the world today In modern society we have turned to drugs to treat mitigate or prevent diseases However since the discovery of nutrients and our increasing analytical capabilities at the molecular level we are beginning to become more knowledgeable of the biochemical structure function relationship of the myriad of chemicals that occur naturally in

foods and their effect on the human body The holistic approach to medicine and diet that began in the 1970s has now seen a renewal as we realize that certain foods because of the presence of specific biochemicals can have a positive impact on an individual's health physical well being and mental state In fact because of the negative image of drugs and the grey area of s xi Foreword xii plements the use of foods that are functional is becoming a growth area for the food industry In Japan this concept has led to one of the largest growing markets where they have defined functional foods as regular foods derived only from naturally occurring ingredients The Japanese further require that the functional foods be consumed as part of the diet and not in supplement form i e
