The central theme of this book and course is functions as models of change. The authors emphasize that functions can be grouped into families and that functions can be used as models for real world behavior. Because linear, exponential, power, and periodic functions are more frequently used to model physical phenomena, they are introduced before polynomial and rational functions. Once introduced, a family of functions is compared and contrasted with other families of functions.

The third edition of this ground breaking text continues the authors' goal: a targeted introduction to precalculus that carefully balances concepts with procedures. Overall, this text is designed to provide a solid foundation to precalculus that focuses on a small number of key topics, thereby emphasizing depth of understanding rather than breadth of coverage. Developed by the Calculus Consortium, FMC 3e is flexible enough to be thought provoking for well-prepared students while still remaining accessible to students with weaker backgrounds. As multiple representations encourage students to reflect on the material, each function is presented symbolically, numerically, graphically, and verbally. The Rule of Four. Additionally, a large number of real world applications, examples, and problems enable students to create mathematical models that will help them understand and interpret the world in which they live.
