edges permits to understand the properties of the evolving trailing vortex layer and the resulting pair of trailing vortices of class 1 wings The concept also shows that Euler methods at sharp delta or strake leading edges of class 2 wings can give reliable results Three main topics are treated 1 Basic Principles are considered first boundary layer flow vortex theory the vorticity content of shear layers Euler solutions for lifting wings the Kutta condition in reality and the topology of skin friction and velocity fields 2 Unit Problems treat isolated flow phenomena of the two wing classes Capabilities of panel and Euler methods are investigated One Unit Problem is the flow past the wing of the NASA Common Research Model Other Unit Problems concern the lee side vortex system appearing at the Vortex Flow Experiment 1 and 2 sharp and blunt edged delta configurations at a delta wing with partly round leading edges and also at the Blunt Delta Wing at hypersonic speed 3 Selected Flow Problems of the two wing classes In short sections practical design problems are discussed The treatment of flow past fuselages although desirable was not possible in the frame of this book **Munson, Young and Okiishi's**
