Chellammal.,2004 Readercentric Writing for Digital Media David Hailey,2016-12-05 This

book presents an altogether new approach to writing and evaluating writing in digital media. It suggests that usability theory provides few tools for evaluating content because usability theory assumes only one kind of writing on the Internet. The author suggests three models: user centric usability model, persuasion centric encouraging the reader to linger and be persuaded, Canon camera ads and quality centric encouraging the reader to linger and learn or be entertained because of the quality of the writing. NASA.gov and YouTube Designed for professional writers and writing students, this text provides a rubric for writing in digital media but more importantly it provides a rubric and vocabulary for identifying and explaining problems in copy that already exists. The Internet has become a pastiche of cut and paste content often placed by non writers to fill space for no particular reason or by computers with no oversight from humans e.g. Amazon.com. Because these snippets are typically on topic but often for the wrong purpose or audience, professional writers have difficulty identifying the problems and an even harder time explaining them. Finding an effective tool for identifying and explaining problems in digital content becomes a particularly important problem as writers increasingly struggle with growing complications in complex information systems. Systems that create and manage their own content with little human intervention. Being able to look at a body of copy and immediately see that it is problematic is an important skill that is lacking in a surprising number of professional writers.

Communication Skills SANGEETA SHARMA, BINOD MISHRA, 2009-03-18 In the era of information technology organizations seek employees who have excellent communication skills. The advantage is for the individuals who with their excellent communicative ability are able to meet the challenges of the professional world through diverse paths such as writing, speaking, reading and listening. This comprehensive and student friendly book dwells on various aspects of technical communication that students of science and engineering should be familiar with. Divided into two parts, Part A of the text describes in detail the planning, designing and drafting of documents for a broad range of situations and applications. The text explores the types of business letters reflecting current practices and different techniques of drafting them. Since in the professional settings executives have to work in teams, the book explains various causes of communication breakdown and ways to overcome them. A separate chapter is devoted to Advertising. Part B elaborates on Group Communication taking into consideration the collective and individual requirements. This part also includes individual chapters on Effective Presentation, Non Verbal Cues, Speeches, Interviews and Negotiation Skills so as to orient young professionals towards new challenges. This compact book is intended primarily as a text for undergraduate students of engineering and science. Besides students of business management would also find the book immensely valuable. In addition, the text would be a handy reference for practicing professionals who wish to hone their communication skills for achieving better results and should prove extremely useful for those involved in everyday communication.
