Joachim Schummer, Bernadette Bensaude-Vincent, Brigitte van Tiggelen, 2007 Stem cells have the ability to differentiate into cells that are found throughout the body This fundamental property of stem cells suggests that they can potentially be used to replace degenerative cells within the body and regenerate the functional capacity of organ systems that have deteriorated because of disease or aging This authoritative textbook provides an overview of the latest advances in the field of stem cell biology spanning topics that include nuclear reprogramming somatic cell cloning and determinants of cell fate embryonic stem cells for hematopoietic and pancreatic repair adult stem cells for cardiovascular neural renal and hepatic repair and manufacturing of stem cells for clinical use Creating Networks in Chemistry Anita Kildebæk Nielsen, Soňa

Štrbáňová, 2008 During the second half of the nineteenth century and the beginning of the twentieth century chemical societies were established all over Europe The book focuses on this process and further development of the European chemical societies before World War I and in exceptional cases up to 1930 It comprises chapters based on a common set of questions and an extensive concluding chapter that provides a comparative analysis of the early development of the European chemical societies The book offers unique historical material showing the social intellectual and political circumstances in which the chemical societies were constituted and function their relations to universities and chemical industries everyday lives international contacts etc The analysis of data explores how networks in chemistry and professional autonomy were constituted and investigates the process of demarcation that inevitably takes place when a social institution of a scientific discipline is formed The reader gets answer to the important question of what chemistry was and was not in the latter half of nineteenth century and the first decades of the twentieth century Various aspects of creating scientific societies have been of much interest to historians of science in recent years Nevertheless histories of scientific societies are mostly occasional publications written to celebrate their jubilees This volume represents a first international comparative analysis on the beginnings of chemical societies in Europe based on a detailed historical research done by a group of renowned historians of chemistry from several countries As such it is an entirely new contribution to the history of chemistry in Europe and European scientific societies in general and a unique source for chemists and historians Its ambition is to become a reference work in history of chemistry set the standard for similar studies in other disciplines and serve European chemical societies to provide a context for their complex histories and relationships The book can be read by miscellaneous audiences and various types of readers with diverse intentions who will benefit differently from it A member of a national chemical society will find there narrative on his own society s establishment and early history and the opportunity to compare it with societies from other countries Historically interested chemists will find in the book details as well as wider perspectives on the institutional history of their discipline Historians of chemistry will get a thoroughly documented and

scholarly book on the early history of chemical societies in Europe written by acknowledged colleagues The individual chapters will offer additional literature and sources for their research into history of chemistry Historians of science will get material for comparative studies on scientific institutions on the roles of learned societies on national and international level They can be inspired to create similar studies related to other scientific disciplines The underlying common set of guidelines can provide methodological assistance Teachers of history of chemistry and history of science will find in the book additional reading material and literature Social and general historians will be given a well edited and reliable source on a number of social institutions that played versatile roles in local national settings The establishment of chemical societies can be compared with other kinds of learned professional and amateur societies in the same period They also will get data and information about some aspects of the scientific boom in the second half of the nineteenth century and pre WW1 period A *Select Bibliography of Chemistry, 1492-1892* Henry Carrington Bolton,1899 *An Account of the Progress in Chemistry in the Year 1882[-1886]* Henry Carrington Bolton,1883 *A Select Bibliography of Chemistry, 1492-1897* Henry Carrington Bolton,1899 **Catalogus der boekerij der Nederlandsche Maatschappij tot bevordering der Geneeskunst** David J.
