Messenger RNA Research Communications Martin H. Ostrovskiy,2007 mRNA messenger RNA is the mediating template between DNA and proteins The information from a particular gene is transferred from a strand of DNA by the construction of a complementary strand of RNA through a process known as transcription Next three nucleotide segments of RNA called tRNA transfer RNA which are attached to specific amino acids match up with the template strand of mRNA to order the amino acids correctly These amino acids are then bonded together to form a protein This process called translation occurs in the ribosome which is composed of proteins and the third kind of RNA rRNA ribosomal RNA This important book presents research from around the globe on this very active field of scientific investigation **Nutrition Support** Scott A.
