Oxford Textbook of Neurocritical Care Martin M. Smith, Giuseppe G. Citerio, W. Andrew I. Kofke, 2016-03-24 The critical care management of patients with life threatening neurological conditions requires the ability to treat neurological injuries manage medical

complications and perform invasive procedures whilst balancing the management of the brain and the body The Oxford Textbook of Neurocritical Care provides an authoritative and up to date summary of the scientific basis clinical techniques and management guidelines in this exciting clinical discipline This highly authoritative textbook is conceptually divided into three sections Section 1 provides an accessible guide to the general principles of neurophysiology and neuropharmacology cardiorespiratory support management of fluids and intracranial hypertension Section 2 outlines the use of multiple monitoring modes which are crucial to diagnosis and management Section 3 covers the management of the major pathologies encountered during neurointensive care with an emphasis on evidence based practice or consensus guidelines to provide a cohesive and definitive clinical resource Authored by an international team of expert practitioners this textbook reflects world wide practice and guidelines This volume is published with a concurrent online version which features access to the full content of the textbook contains links from the references to primary research journal articles allows full text searches and provides access to figures and tables that can be downloaded to PowerPoint Designed for consultants and trainees in neurocritical care The Oxford Textbook of Neurocritical Care is also accessible to the general critical care physician and trainees who need a definite and authoritative resource to meet the unique needs of neurocritically ill patients Oh's Intensive Care Manual Andrew D. Bersten, Neil Soni, 2009-01-01 The sixth edition provides practical concise information on all aspects of intensive care Written in a clear and accessible style and now for the first time presented in colour throughout this book enables the user to manage a patient in an ICU setting effectively without recourse to large text reference works or specialized monographs This thoroughly revised and updated edition reflects the best and most current practice from leading centres in Australia the UK and Western Europe Information on management and treatment of conditions is balanced by pathophysiological and pharmacological background This is not just a cook book of procedures It provides all of the essential information for candidates wishing to pass professional examinations Addition of colour throughout to highlight summary boxes tables charts and flow diagrams Will make key information more accessible easier and faster to retrieve Pitfalls in treatment and management emphasized in each chapter Provides the user with expert advice on practical issues that will be encountered on a day to day basis in the ICU Keeps the user abreast of the latest developments in diagnosis and management **Neurocritical Care** Michel T. Torbey, 2019-07-18 A comprehensive practical guide providing critical solutions in the management of critically ill neurologic and neurosurgical patients **Between Theory and Clinic: The Contribution of Neuroimaging in the Field of Consciousness Disorders** Olivia Gosseries, Steven Laureys, Caroline Schnakers, 2019-05-16 The amount of patients surviving severe brain injury has gradually increased over these last decades thanks to the development of intensive care These patients either recover quickly from coma or go through prolonged disorders of consciousness such as vegetative state unresponsive wakefulness syndrome VS UWS or minimally conscious state MCS While patients in a minimally conscious state are to some extent aware of themselves and the environment and

show fluctuating but reproducible signs of consciousness patients in a vegetative state unresponsive wakefulness syndrome are awake but only show reflexive behaviors These patients are unable to communicate and present vigilance fluctuation sensory deficits as well as severe motor and language impairments Even though behavioral assessment currently remains the gold standard for diagnosis a number of studies highlights the difficulty in making the distinction between conscious and unconscious patients based on clinical examinations and show a misdiagnosis rate as high as 40% Misdiagnosis can nevertheless have serious consequences on patient s management medically but also ethically i e regarding end of life decision The emergence of functional neuroimaging techniques such as positron emission tomography PET and functional magnetic resonance imaging fMRI opened new opportunities to study brain activity in patients with disorders of consciousness DOC Recent neuroimaging tools have brought new understandings on how the brain functions after coma and how these tools can complement bedside assessment by improving diagnosis and prognosis of DOC patients Indeed we know now that most patients in VS UWS present partial activation of sensory networks and impaired functional connectivity contrary to patients in MCS The reemergence of thalamo cortical connections has also been associated with recovery of consciousness whereas thalamic atrophy has been associated to chronic DOC Recent findings have also stressed the interest of neuroimaging in the management and the treatment of these patients fMRI has been used as brain computer interfaces to detect consciousness in unresponsive patients and to allow basic communication in minimally conscious patients Neuroimaging techniques are also currently being used to examine the effects of potential therapy such as pharmacological medications e g Amantadine or Zolpidem and brain stimulations e g transcranial direct current stimulation or repetitive transcranial magnetic stimulation
