approach that would combine diverse data sources from government and private sector sources including describing statistical models for combining data from multiple sources examining statistical and computer science approaches that foster privacy protections evaluating frameworks for assessing the quality and utility of alternative data sources and various models for implementing the recommended new entity Together the two reports offer ideas and recommendations to help federal statistical agencies examine and evaluate data from alternative sources and then combine them as appropriate to provide the country with more timely actionable and useful information for policy makers businesses and individuals

  GeoSpatial Semantics M. Andrea Rodriguez,Isabel F. Cruz,Max J. Egenhofer,Sergei Levashkin,2005-11-03 This book constitutes the refereed proceedings of the First International Conference on GeoSpatial Semantics GeoS 2005 held in Mexico City Mexico in November 2005 The 15 revised full papers presented together with 4 short papers were carefully reviewed and selected from 42 submissions The papers are organized in topical sections on theories for the semantics of geospatial information formal representations for geospatial data similarity comparison of spatial data sets ontology based spatial information retrieval and geospatial semantic Web   **A Business Ecology Perspective on Community-Driven Open Source** Markus Radits,2018-11-26 This thesis approaches the phenomenon of open source software OSS from a managerial and organisational point of view In a slightly narrower sense this thesis studies commercialisation aspects around community driven open source The term community driven signifies open source projects that are managed steered and controlled by communities of volunteers as opposed to those that are managed steered and controlled by single corporate sponsors By adopting a business ecology perspective this thesis places emphasis on the larger context within which the commercialisation of OSS is embedded e g global and collaborative production regimes ideological foundations market characteristics and diffuse boundary conditions Because many business benefits arise as a consequence of the activities taking place in the communities and ecosystems around open source projects a business ecology perspective may be a useful analytical guide for understanding the opportunities challenges and risks that firms face in commercializing OSS There are two overarching themes guiding this thesis The first theme concerns the challenges that firms face in commercialising

community driven open source There is a tendency in the literature on business ecosystems and open source to emphasise the benefits opportunities and positive aspects of behaviour at the expense of the challenges that firms face However business ecosystems are not only spaces of opportunity they may also pose a variety of challenges that firms need to overcome in order to be successful To help rectify this imbalance in the literature the first theme particularly focuses on the challenges that firms face in commercialising community driven open source The underlying ambition is to facilitate a more balanced and holistic understanding of the collaborative and competitive dynamics in ecosystems around open source projects The other theme concerns the complex intertwining of community engagement and profit oriented venturing As is acknowledged in the literature the subject of firm community interaction has become increasingly important because the survival success and sustainability of peer production communities has become of strategic relevance to many organisations However while many strategic benefits may arise as a consequence of firm community interaction there is a lack of research studying how the value creating logics of firm community interaction are embedded within the bigger picture in which they occur Bearing this bigger picture in mind this thesis explores the intertwining of volunteer community engagement and profit oriented venturing by focusing on four aspects that are theorised in the literature reinforcement complementarity synergy and reciprocity This thesis is designed as a qualitative exploratory single case study The empirical case is Joomla a popular open source content management system In a nutshell the Joomla case in this thesis comprises the interactions in the Joomla community and the commercial activities around the Joomla platform e g web development consulting marketing customisation extensions In order to achieve greater analytical depth the business ecology perspective is complemented with ideas and propositions from other theoretical areas such as stakeholder theory community governance organizational identity motivation theory pricing and bundling The findings show that the common challenges in commercialising community driven open source revolve around nine distinct factors that roughly cluster into three domains the ecosystem the community and the firm In short the domain of the ecosystem comprises the global operating environment the pace of change and the cannibalisation of ideas The domain of the community comprises the platform policy platform image and the voluntary nature of the open source project And finally the domain of the firm comprises the blurring boundaries between private and professional lives the difficulty of estimating costs and firm dependencies Based on these insights a framework for analysing community based value creation in business ecosystems is proposed This framework integrates collective innovation community engagement and value capture into a unified model of value creation in contexts of firm community interaction Furthermore the findings reveal demonstrable effects of reinforcement complementarity synergy and reciprocity in the intertwining of volunteer community engagement and profit oriented venturing By showing that this intertwining can be strong in empirical cases where commercial activities are often implicitly assumed to be absent this thesis provides a more nuanced understanding of firm involvement in the realm of open source Based on the empirical and analytical insights a

number of further theoretical implications are discussed such as the role of intersubjective trust in relation to the uncertainties that commercial actors face an alternative way of classifying community types the metaphor of superorganisms in the context of open source issues pertaining to the well being of community participants and issues in relation to the transitioning of open source developers from a community based to an entrepreneurial self identity when commercialising an open source solution Furthermore this thesis builds on six sub studies that make individual contributions of their own In a broad sense this thesis contributes to the literature streams on the commercialisation of OSS the business value and strategic aspects of open source the interrelationships between community forms of organising and entrepreneurial activities and the nascent research on ecology perspectives on peer production communities A variety of opportunities for future research are highlighted Denna avhandling unders ker fenomenet ppen k llkod open source ur ett lednings och styrningsperspektiv Mer konkret studeras aspekter p kommersialisering av ett community drivet open source projekt OSS open source software Uttrycket community drivet h nvisar till open source projekt som drivs och styrs av volont rgrupper till skillnad fr n open source projekt som drivs och styrs av enskilda f retag Genom att till mpa ett aff rsekologiperspektiv fokuserar denna avhandling p det vidare sammanhang som karakt riserar kommersialisering av OSS s som globala och kollaborativa produktionssystem v rderingarna ppenhet och samarbete marknadsstrukturer och diffusa organisationsgr nser Aktiviteterna i open source communityn och dess kringliggande ekosystem kan bidra till m nga f rdelar f r f retag och d rf r kan ett aff rsekologiperspektiv vara en anv ndbar analytisk lins f r att f rst de m jligheter utmaningar och risker som f retag st r inf r n r de kommersialiserar OSS Tv vergripande teman lyfts fram i denna avhandling Det f rsta temat handlar om de utmaningar som f retag st r inf r n r de kommersialiserar community driven OSS Det finns i litteraturen om aff rsekologier och open source en tendens att betona f rdelar m jligheter och positiva aspekter p beteende p bekostnad av att unders ka utmaningar som f retag st r inf r Aff rsekologier inneb r dock inte enbart m jligheter f r f retag utan kan ocks orsaka en rad utmaningar som f retag beh ver hantera f r att lyckas Med utg ngspunkt i denna obalans i litteraturen fokuserar det f rsta temat p de utmaningar med kommersialisering av community driven OSS Detta g rs f r att bidra till en mer balanserad och holistisk f rst else av den p samma g ng kollaborativa och konkurrerande dynamiken i aff rsekologin runt ett open source projekt Det andra temat handlar om sammanfl tningen intertwining mellan community deltagande och vinstdrivande verksamhet S som det framg r i litteraturen har fr gan om samverkan mellan f retag och communities blivit allt viktigare eftersom communityernas verlevnad framg ng och h llbarhet har blivit strategiskt viktiga f r m nga organisationer ven om m nga strategiska f rdelar kan uppst som en f ljd av samverkan mellan f retag och communities saknas forskning om hur v rdeskapande uppst r i en vidare kontext Med ett bredare perspektiv i tanke unders ker denna avhandling sammanfl tningen av frivilligt community deltagande och en vinstdrivande verksamhet genom att fokusera p fyra aspekter av sammanfl tning som f rekommer i litteraturen f rst rkning komplementaritet synergi och msesidighet Denna avhandling r utformad som en
