Abstract. In a series of experiments, we examined the effects of the type of feedback (i.e., correct or incorrect) and the type of question (i.e., multiple-choice or open-ended) on the accuracy of responses. The results showed that the type of feedback had a significant effect on the accuracy of responses, with correct feedback leading to higher accuracy than incorrect feedback. The type of question also had a significant effect on the accuracy of responses, with multiple-choice questions leading to higher accuracy than open-ended questions. The interaction between the type of feedback and the type of question was also significant, with correct feedback leading to higher accuracy for multiple-choice questions than for open-ended questions, and incorrect feedback leading to higher accuracy for open-ended questions than for multiple-choice questions. These findings have implications for the design of educational assessments and for the interpretation of test results.
