Elements of Structures and Defects of Crystalline Materials Tsang-Tse Fang, 2018-01-25. *Elements of Structures and Defects of Crystalline Materials* has been written to cover not only the fundamental principles behind structures and defects but also to provide deep insights into understanding the relationships of properties, defect chemistry, and processing of the concerned materials. Part One deals with structures while Part Two covers defects. Since the knowledge of the electron configuration of elements is necessary for understanding the nature of chemical bonding, it is discussed in the opening chapter. Chapter Two then describes the bonding formation within the crystal structures of varied materials with Chapter Three delving into how a material's structure is formed. In view of the importance of the effects of the structure distortion on the material properties, due to the fields, the related topics have been included in section 3.4. Moreover, several materials still under intensive investigation have been illustrated to provide deep insights into understanding the effects of the relationships of processing, structures, and defects on the material properties. The defects of materials are explored in Part II. Chapter 4 deals with the point defects of metal and ceramics. Chapter 5 covers the fundamentals of the characteristics of dislocations, wherein physics and the atomic mechanics of several issues have been described in detail. In view of the significant influence of the morphologies, including size, shape, and distribution of grains, phases, on the microstructure evolution, and in turn the properties of materials, the final chapter focuses on the fundamentals of interface energies, including
