Strategy Instruction for Middle and Secondary Students with Mild Disabilities Greg Conderman, Laura Hedin, Val Bresnahan, 2013-02-14 Teach your students learning strategies that will last a lifetime The

pressure is on special and general education teachers alike. If we're to ensure that adolescents with mild disabilities achieve the very same gains as their peers, we must first teach them how to learn. Here's a one-stop guide for getting started pairing the very best instructional methods with assessments and IEP goals so all students can be independent learners. Driven by research, this indispensable resource features evidence-based strategies for teaching vocabulary, reading, written language, math, and science, as well as study skills, textbook skills, and self-regulation. Clear presentation that describes strategies in context. Informal assessments for every content area or skill addressed. Case studies that link assessment results, IEP goals, and learning strategies. Application activities with questions and suggested responses. Whether you teach in an inclusive resource or self-contained setting, there's no better guide for teaching your students learning strategies that will last a lifetime. This is a rare find: a book for practitioners that actually stays on task throughout and provides an abundance of teaching strategies. As a veteran of the classroom, it is nice to find strategies that are useful and can be readily implemented.

Sally Jeanne Coghlan, Special Education Teacher, Rio Linda Preparatory Academy, Rio Linda, CA. I really like this comprehensive resource of strategies. I felt the book was written for people like me, struggling to do the very best for my students to make their time in school truly of benefit.

In order to best understand the impact an intervention can have on pediatric patients, a basic understanding of both brain development and brain injury are necessary. Initial theories of brain injury proposed an advantage of early age, suggesting greater plasticity of the brain. However, growing literature supports the contrasting heuristic provided by Maureen Dennis. This widely accepted theory emphasizes the increased vulnerability of the developing brain. Instead of focusing solely on the age of the child at brain injury to illustrate the vulnerability of the brain, Dennis recommends examining the extent to which a skill is developed at the time of injury.
