Fundamentals Of Combustion Processes Mechanical Engineering Series:

Fundamentals of Combustion Processes Sara McAllister, Jyh-Yuan Chen, A. Carlos Fernandez-Pello, 2011-05-10

Fundamentals of Combustion Processes is designed as a textbook for an upper division undergraduate and graduate level combustion course in mechanical engineering. The authors focus on the fundamental theory of combustion and provide a simplified discussion of basic combustion parameters and processes such as thermodynamics, chemical kinetics, ignition, diffusion, and pre-mixed flames. The text includes exploration of applications, example exercises, suggested homework problems, and videos of laboratory demonstrations. Advances in Internal Combustion Engines and Fuel Technologies Hoon Kiat Ng, 2013-03-20. This book highlights the important need for more efficient and environmentally sound combustion technologies that utilise renewable fuels to be continuously developed and adopted. The central theme here is two-fold: internal combustion engines and fuel solutions for combustion systems. Internal combustion engines remain as the main propulsion system used for ground transportation, and the number of successful developments achieved in recent years is as varied as the new design concepts introduced. It is therefore timely that key advances in engine technologies are organised appropriately so that the fundamental processes, applications, insights, and identification of future development can be consolidated. In the future and across the developed and emerging markets of the world, the range of fuels used will significantly increase as biofuels, new fossil fuel feedstock, and processing methods, as well as variations in fuel standards, continue to influence all combustion technologies used now and in coming streams. This presents a challenge requiring better understanding of how the fuel mix influences the combustion processes in various systems. The book allows extremes of the theme to be covered in a simple yet progressive way. Ignition Sources K. Ramamurthi, 2023-01-01. This book discusses the different energy sources bringing about fires, explosions, and detonations in combustibles under different levels of confinement. Focus is on the initiation source for a combustible, whether it is a gas, a liquid, or a solid, in a given state of confinement. Incidents of oxygen-related fires in hospitals, which were particularly evident with increased usage of oxygen therapy for the extremely ill COVID-19 patients in 2021, are discussed with details of formation, accumulation, and dissipation of charges and their discharges leading to fires and explosions. Sympathetic detonations, BLEVE explosions, cook-off tests of combustibles, the inadvertent ignition sources, threats, and their control are discussed. Sporadic ignition of wildfires in a heat dome, augmented by the reflection of expansion disturbances from the interfaces separating media of different acoustic impedances, are explored. Spontaneous human combustion, pilot ignition, shock wave ignition, ignition of fuel droplets, and conditions under which fires, explosions, and detonations take place are discussed. Different ways of mitigating the inadvertent initiation of explosions and detonations are given at the end. *Integrated Computer Technologies in Mechanical Engineering - 2023* Mykola Nechyporuk, Volodymir Pavlikov, Dmytro Krytskyi, 2024-06-04. The International Scientific and Technical Conference Integrated Computer Technologies in Mechanical Engineering Synergetic Engineering ICTM was

established by National Aerospace University Kharkiv Aviation Institute The Conference ICTM 2023 was held in Kharkiv Ukraine during December 2023 During this conference technical exchanges between the research community were carried out in the forms of keynote speeches panel discussions as well as special session In addition participants were treated to a series of receptions which forge collaborations among fellow researchers ICTM 2023 received 202 papers submissions from different countries All of these offer us plenty of valuable information and would be of great benefit to the experience exchange among scientists in modeling and simulation The organizers of ICTM 2023 made great efforts to ensure the success of this conference We hereby would like to thank all the members of ICTM 2023 Advisory Committee for their guidance and advice the members of program committee and organizing committee and the referees for their effort in reviewing and soliciting the papers and all authors for their contribution to the formation of a common intellectual environment for solving relevant scientific problems Also we grateful to Springer Janusz Kacprzyk and Thomas Ditzinger as the editor responsible for the series Lecture Notes in Networks and Systems for their great support in publishing these selected papers

Fuel for the Future George Domazetis,2019-08-09 We are currently facing a global problem caused by increasing levels of greenhouse gases mostly derived from fossil fuels resulting in climate change Communities want an affordable and secure supply of power alongside emissions reductions Coal electricity generation offers a secure and affordable supply but currently this comes with high emissions This volume examines efforts by both industry and governments to develop a cleaner use of low rank coals It presents leading research on creating affordable high quality fuel for efficient power generation with a trajectory toward affordable zero emissions production This book will be of interest to organisations active in developing clean usage of coal and which conduct research on low emissions power It will also contribute to policy development of low and zero emissions coal power generation particularly in regions with abundant deposits of low cost brown coal lignite and subbituminous coal including the US China Europe India Indonesia and Australia

Decarbonized Fuel Options for Long-haul Commercial Vehicles Jody Emlyn Muelaner,2023-03-15 Most heavy trucks should be fully electric using a combination of batteries and catenary electrification but heavy trucks requiring very long unsupported range will need chemical fuels At the scale of heavy trucks compressed hydrogen can match the specific energy of diesel but its energy density is five times lower limiting range to around 2 000 km Scaling green hydrogen production and addressing leakage must be priorities Hydrogen derived electrofuels or e fuels have the potential to scale and while the economic comparison currently has unknowns clean air considerations have gained new importance Decarbonized Power Options for Long haul Commercial Vehicles discusses these energy sources as well as the caveats related to bioenergy usage and reasons to prefer ethanol or methanol to diesel type fuels Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2023005>

Decarbonized Power Options for Non-road Mobile Machinery Jody Emlyn Muelaner,2023-01-19 Power options for off road vehicles differ substantially from other commercial vehicles Battery electrification is suitable for

urban construction and light agriculture but remote mining forestry and road building operations will require alternative fuels Decarbonized Power Options for Non road Mobile Machinery discusses these domains as well as the potential benefits and challenges of implementing fuels and energy sources such as bioenergy e fuels and alcohol as well as hydrogen hydrocarbon and direct methanol fuel cells Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2023002>

Decarbonized Fuel Options for Civil Aviation Jody E. Muelaner,2023-06-13 Drop in replacement biofuels and electrofuels can provide net zero CO2 emissions with dramatic reductions in contrail formation Biofuels must transition to second generation cellulosic feedstocks while improving land and soil management Electrofuels or e fuels require aggressive cost reduction in hydrogen production carbon capture and fuel synthesis Hydrogen has great potential for energy efficiency cost reduction and emissions reduction however its low density even in liquid form combined with its extremely low boiling temperature mean that bulky spherical tanks will consume considerable fuselage volume Still emerging direct kerosene fuel cells may ultimately provide a superior zero emission energy dense solution Decarbonized Power Options for Civil Aviation discusses the current challenges with these power options and explores the economic incentives and levers vital to decarbonization Until common and enforceable global carbon pricing arrives targeted national measures e.g mandates price support and finance will be required Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2023012>
