

The illustration is a detailed scientific drawing of a caddisfly larva and its various cases. The larva is shown in the upper left, curved, with its segmented body, legs, and antennae clearly visible. Below and to the right of the larva are several different types of cases or pupal cases. One case is a simple, elongated tube. Another is a more complex, multi-layered structure. A third is a wide, funnel-shaped case. A fourth is a long, curved, ribbed case. A fifth is a short, wide, ribbed case. The entire illustration is rendered in a monochromatic, sepia-toned style, typical of early 20th-century scientific publications.

**Caddisflies** Glenn B. Wiggins, 2005-12-15 Caddisflies constitute the insect order Trichoptera in which some 10 000 species are known in the world including about 1400 in North America Fossil evidence shows that caddisflies originated in the Triassic period 200 250 million years ago They are important links in the movement of energy and nutrients through freshwater ecosystems due largely to the extraordinary diversification in their larval architecture which includes portable and stationary shelters silken filter nets and osmotically semipermeable cocoons Glenn Wiggins's *Caddisflies* is the foremost comprehensive reference source about these insects and is concerned with behavioural ecology evolutionary history biogeography and biological diversity Wiggins outlines fundamental concepts of aquatic ecology illuminating the ways in which caddisflies help to make fresh waters work Essential features of morphology biology and distribution are outlined for the twenty six North American families of caddisflies and illustrated diagnostic keys are provided for larvae pupae and adults The author also brings together information on caddisflies from widely scattered sources and provides comprehensive coverage of the scientific literature

**Animal Architects** James L Gould, Carol Grant Gould, 2012-03-06 Animal behavior has long been a battleground between the competing claims of nature and nurture with the possible role of cognition in behavior as a recent addition to this debate There is an untapped trove of behavioral data that can tell us a great deal about how the animals draw from these neural strategies The structures animals build provide a superb window on the workings of the animal mind *Animal Architects* examines animal architecture across a range of species from those whose blueprints are largely innate such as spiders and their webs to those whose challenging structures seem to require intellectual insight planning and even aesthetics such as bowerbirds nests or beavers dams Beginning with instinct and the simple homes of solitary insects James and Carol Gould move on to conditioning the cognitive map and how it evolved and the role of planning and insight Finally they reflect on what animal building tells us about the nature of human intelligence showing why humans unlike many animals need to build castles in the air

**Common Nymphs of Eastern North America** Caleb J. Tzilkowski, Jay R. Stauffer Jr., 2011-08-15 Although the concept of matching the hatch has been central to flyfishing for 150 years it has been used almost exclusively for dry flyfishing With *Common Nymphs of Eastern North America* A Primer for Flyfishers and Flytiers Caleb Tzilkowski and Jay Stauffer Jr take trout enthusiasts in another hatch matching direction to the year round underwater nymph hatch which in most cases constitutes 90 percent of trout diets Successful flyfishers have at least rudimentary knowledge of the organisms that artificial flies imitate The relatively few and very best anglers are expert at identifying and imitating nymph appearances and habits A major hurdle to becoming expert at nymph matching is overcoming two major limitations that make these animals difficult to locate capture and identify first nymphs live underwater sometimes burrowed into the stream bottom and second many nymphs are nearly microscopic in size *Common Nymphs* addresses those challenges by including habitat and life history information regarding the nymphs tips for their identification and representative high resolution photographs of more than thirty types of aquatic organisms and their imitations In the seemingly saturated flyfishing literature this book offers something truly groundbreaking With state of the art microscopy and their years of scientific and practical experience Tzilkowski and Stauffer provide readers an innovative close up look at identifying and imitating nymphs that have been historically underrepresented in the flyfishing and flytying literature
