Warren B. Powell, Ilya O. Ryzhov, 2013-07-09. Learn the science of collecting information to make effective decisions. Everyday decisions are made without the benefit of accurate information. *Optimal Learning* develops the needed principles for gathering information to make decisions, especially when collecting information is time consuming and expensive. Designed for readers with an elementary background in probability and statistics, the book presents effective and practical policies illustrated in a wide range of applications from energy, homeland security, and transportation to engineering, health, and business. This book covers the fundamental dimensions of a learning problem and presents a simple method for testing and comparing policies for learning. Special attention is given to the knowledge gradient policy and its use with a wide range of belief models, including lookup table and parametric, and for online and offline problems. Three sections develop ideas with increasing levels of sophistication: Fundamentals explores fundamental topics including adaptive learning, ranking, and selection; the knowledge gradient and bandit problems; Extensions and Applications features coverage of linear belief models, subset selection models, scalar function optimization, optimal bidding, and stopping problems; Advanced Topics explores complex methods including simulation, optimization, active learning in mathematical programming, and optimal continuous measurements. Each chapter identifies a specific learning problem, presents the related practical algorithms for implementation, and concludes with numerous exercises. A related website features additional applications and downloadable software, including MATLAB and the Optimal Learning Calculator, a spreadsheet-based package that provides an introduction to learning and a variety of policies for learning.

Statistics for Imaging, Optics, and Photonics Peter Bajorski, 2011-10-17. A vivid, hands-on discussion of the statistical methods in imaging, optics, and photonics applications. In the field of imaging science, there is a growing need for students and practitioners to be equipped with the necessary knowledge and tools to carry out quantitative analysis of data. Empirical Model Building James R. Thompson, 2011-11-30 Praise for the First Edition This novel and highly stimulating book which emphasizes solving real problems should be widely read It will have a positive and lasting effect on the teaching of modeling and statistics in general Short Book Reviews This new edition features developments and real world examples that showcase essential empirical modeling techniques Successful empirical model building is founded on the relationship

between data and approximate representations of the real systems that generated that data. As a result, it is essential for researchers who construct these models to possess the special skills and techniques for producing results that are insightful, reliable, and useful.

Empirical Model Building: Data, Models, and Reality, Second Edition, presents a hands-on approach to the basic principles of empirical model building through a shrewd mixture of differential equations, computer-intensive methods, and data. The book outlines both classical and new approaches and incorporates numerous real-world statistical problems that illustrate modeling approaches that are applicable to a broad range of audiences, including applied statisticians and practicing engineers and scientists. The book continues to review models of growth and decay systems where competition and interaction add to the complexity of the model while discussing both classical and non-classical data analysis methods. This Second Edition now features further coverage of momentum-based investing practices and resampling techniques, showcasing their importance and expediency in the real world. The author provides applications of empirical modeling, such as computer modeling of the AIDS epidemic to explain why North America has most of the AIDS cases in the First World, and data-based strategies that allow individual investors to build their own investment portfolios. Throughout the book, computer-based analysis is emphasized, and newly added and updated exercises allow readers to test their comprehension of the presented material.

Empirical Model Building, Second Edition, is a suitable book for modeling courses at the upper undergraduate and graduate levels. It is also an excellent reference for applied statisticians and researchers who carry out quantitative modeling in their everyday work.

Forthcoming Books Rose Arny, 2003-04 [Sampling](#) Steven K. Thompson, 2012-02-08

Praise for the Second Edition: This book has never had a competitor. It is the only book that takes a broad approach to sampling. Any good personal statistics library should include a copy of this book.

Technometrics Well-written, an excellent book on an important subject. Highly recommended. Choice. An ideal reference for scientific researchers and other professionals who use sampling.

Zentralblatt Math Features new developments in the field combined with all aspects of obtaining, interpreting, and using sample data. Sampling provides an up-to-date treatment of both classical and modern sampling design and estimation methods, along with sampling methods for rare, clustered, and hard-to-detect populations. This Third Edition retains the general organization of the two previous editions but incorporates extensive new material, sections, exercises, and examples throughout. Inside, readers will find all new approaches to explain the various techniques in the book, new figures to assist in better visualizing and comprehending underlying concepts, such as the different sampling strategies, computing notes for sample selection, calculation of estimates, and simulations, and more.

Organized into six sections, the book covers basic sampling from simple random to unequal probability sampling, the use of auxiliary data with ratio and regression estimation, sufficient data model and design in practical sampling, useful designs such as stratified cluster and systematic multistage double and network sampling, detectability methods for elusive populations, spatial sampling, and adaptive sampling designs.
