8-1/ Exercice 2-1

8-2/ Exercice 2-2

8-3/ Exercice 2-3

8-4/ Exercice 2-4

8-1/ Exercice 2-1

Soit X la variable aléatoire définie par le tableau suivant :

x_i	1	2	3	4	5
p_i	0,25	p_2	0,18	p_4	0,37

1. Déterminer la valeur de p_2 et p_4 sachant que les événements $[X = 2]$ et $[X = 4]$ sont équiprobables.
2. Calculer les probabilités suivantes :

$$P(X \geq 2) ; P(1 \leq X \leq 3) ; P_{(X \geq 2)}(X \leq 4)$$

3. Calculer l'espérance $E(X)$ et l'écart-type $\sigma(X)$.
4. Déterminer la fonction de répartition F_x de X , puis tracer sa courbe.

8-2/ Exercice 2-2

On considère le jeu suivant :

Le joueur lance d'abord un dé non truqué. S'il obtient 1, 2 ou 3, il gagne l'équivalent en dirhams (c'est-à-dire 1 Dh s'il obtient 1 par exemple). Sinon, il perd 2Dh.

On note X la variable aléatoire correspondant au gain du joueur (négatif en cas de perte).

1. Donner la loi de probabilité de X et sa fonction de répartition F_x .
2. Calculer l'espérance mathématique $E(X)$ et la variance $V(X)$.

On modifie le jeu de la façon suivante : les gains restent les mêmes pour les résultats 1, 2 ou 3, mais si le joueur obtient autre chose, il relance le dé. S'il obtient 3 ou moins, il gagne 3Dh, sinon il perd 5Dhs.

3. Décrire formellement l'univers du nouveau jeu.

On note Y la variable aléatoire qui désigne le nouveau gain du joueur.

Alfred Renyi,2007-01-01 Introducing many innovations in content and methods this book involves the foundations basic concepts and fundamental results of probability theory Geared toward readers seeking a firm basis for study of mathematical statistics or information theory it also covers the mathematical notions of experiments and independence 1970 edition

Calcul des probabilités ,1966 *Probability and Social Science* Daniel Courgeau,2012-02-23 This work examines in depth the methodological relationships that probability and statistics have maintained with the social sciences from their emergence It covers both the history of thought and current methods First it examines in detail the history of the different paradigms and axioms for probability from their emergence in the seventeenth century up to the most recent developments of the three major concepts objective subjective and logicist probability It shows the statistical inference they permit different applications to social sciences and the main problems they encounter On the other side from social sciences particularly population sciences to probability it shows the different uses they made of probabilistic concepts during their history from the seventeenth century according to their paradigms cross sectional longitudinal hierarchical contextual and multilevel approaches While the ties may have seemed loose at times they have more often been very close some advances in probability were driven by the search for answers to questions raised by the social sciences conversely the latter have made progress thanks to advances in probability This dual approach sheds new light on the historical development of the social sciences and probability and on the enduring relevance of their links It permits also to solve a number of methodological problems encountered all along their history Classic Problems of Probability Prakash Gorroochurn,2016-05-02 Winner of the 2012 PROSE Award for Mathematics from The American Publishers Awards for Professional and Scholarly Excellence A great book one that I will certainly add to my personal library Paul J Nahin Professor Emeritus of Electrical Engineering University of New Hampshire Classic Problems of Probability presents a lively account of the most intriguing aspects of

statistics The book features a large collection of more than thirty classic probability problems which have been carefully selected for their interesting history the way they have shaped the field and their counterintuitive nature From Cardano s 1564 Games of Chance to Jacob Bernoulli s 1713 Golden Theorem to Parrondo s 1996 Perplexing Paradox the book clearly outlines the puzzles and problems of probability interweaving the discussion with rich historical detail and the story of how the mathematicians involved arrived at their solutions Each problem is given an in depth treatment including detailed and rigorous mathematical proofs as needed Some of the fascinating topics discussed by the author include Buffon s Needle problem and its ingenious treatment by Joseph Barbier culminating into a discussion of invariance Various paradoxes raised by Joseph Bertrand Classic problems in decision theory including Pascal s Wager Kraitichik s Neckties and Newcomb s problem The Bayesian paradigm and various philosophies of probability Coverage of both elementary and more complex problems including the Chevalier de M r problems Fisher and the lady testing tea the birthday problem and its various extensions and the Borel Kolmogorov paradox Classic Problems of Probability is an eye opening one of a kind reference for researchers and professionals interested in the history of probability and the varied problem solving strategies employed throughout the ages The book also serves as an insightful supplement for courses on mathematical probability and introductory probability and statistics at the undergraduate level *Revue Semestrielle Des Publications Mathématiques*, 1927 Classical Probability in the Enlightenment, New Edition Lorraine Daston, 2023-08-08 An award winning history of the Enlightenment quest to devise a mathematical model of rationality What did it mean to be reasonable in the Age of Reason Enlightenment mathematicians such as Blaise Pascal Jakob Bernoulli and Pierre Simon Laplace sought to answer this question laboring over a theory of rational decision action and belief under conditions of uncertainty Lorraine Daston brings to life their debates and philosophical arguments charting the development and application of probability theory by some of the greatest thinkers of the age Now with an incisive new preface Classical Probability in the Enlightenment traces the emergence of new kind of mathematics designed to turn good sense into a reasonable calculus Green, Brown, and Probability & Brownian Motion on the Line Kai Lai Chung, 2002 This invaluable book consists of two parts Part I is the second edition of the author s widely acclaimed publication Green Brown and Probability which first appeared in 1995 In this exposition the author reveals from a historical perspective the beautiful relations between the Brownian motion process in probability theory and two important aspects of the theory of partial differential equations initiated from the problems in electricity Green s formula for solving the boundary value problem of Laplace equations and the Newton Coulomb potential Part II of the book comprises lecture notes based on a short course on Brownian Motion on the Line which the author has given to graduate students at Stanford University It emphasizes the methodology of Brownian motion in the relatively simple case of one dimensional space Numerous exercises are included **Calcul des probabilités** Joseph Louis Francois Bertrand, 1907 **Calcul des probabilités** Louis Bachelier, 1912 Calcul des probabilités Henri Poincaré, 1912 Calcul

des probabilités Paul Lévy, 1925 **Calcul des probabilités** Joseph Bertrand, 1889 **A History of Inverse Probability** Andrew I. Dale, 2012-09-08 This is a history of the use of Bayes theorem from its discovery by Thomas Bayes to the rise of the statistical competitors in the first part of the twentieth century The book focuses particularly on the development of one of the fundamental aspects of Bayesian statistics and in this new edition readers will find new sections on contributors to the theory In addition this edition includes amplified discussion of relevant work **Mathematical Finance - Bachelier Congress 2000** Helyette Geman, Dilip Madan, Stanley R. Pliska, Ton Vorst, 2013-11-11 The Bachelier Society for Mathematical Finance held its first World Congress in Paris last year and coincided with the centenary of Louis Bachelier's thesis defence In his thesis Bachelier introduces Brownian motion as a tool for the analysis of financial markets as well as the exact definition of options The thesis is viewed by many as the key event that marked the emergence of mathematical finance as a scientific discipline The prestigious list of plenary speakers in Paris included two Nobel laureates Paul Samuelson and Robert Merton and the mathematicians Henry McKean and S R S Varadhan Over 130 further selected talks were given in three parallel sessions **I. J. Bienaymé** C. C. Heyde, E. Seneta, 2012-12-06 Our interest in I J Bienaymé was kindled by the discovery of his paper of 1845 on simple branching processes as a model for extinction of family names In this work he announced the key criticality theorem 28 years before it was rediscovered in incomplete form by Galton and Watson after whom the process was subsequently and erroneously named Bienaymé was not an obscure figure in his time and he achieved a position of some eminence both as a civil servant and as an Academician However his is no longer widely known There has been some recognition of his name work on least squares and a gradually fading attribution in connection with the Bienaymé-Chebyshev inequality but little more In fact he made substantial contributions to most of the significant problems of probability and statistics which were of contemporary interest and interacted with the major figures of the period We have over a period of years collected his traceable scientific work and many interesting features have come to light The present monograph has resulted from an attempt to describe his work in its historical context Earlier progress reports have appeared in Heyde and Seneta 1972 to be reprinted in Studies in the History of Probability and Statistics Volume 2 Griffin London 1975 1976 **In Memoriam Paul-André Meyer - Séminaire de Probabilités XXXIX** Marc Yor, Michel Émery, 2006-10-17 The 39th volume of Séminaire de Probabilités is a tribute to the memory of Paul André Meyer His life and achievements are recalled in this book and tributes are paid by his friends and colleagues This volume also contains mathematical contributions to classical and quantum stochastic calculus the theory of processes martingales and their applications to mathematical finance and Brownian motion These contributions provide an overview on the current trends of stochastic calculus
