Publishers' circular and booksellers' record ,1857 Sturge's Statistical and Thermal Physics, Second Edition

Jeffrey Olafsen,2019-07-26 The original work by M D Sturge has been updated and expanded to include new chapters covering non equilibrium and biological systems This second edition re organizes the material in a more natural manner into four parts that continues to assume no previous knowledge of thermodynamics The four divisions of the material introduce the subject inductively and rigorously beginning with key concepts of equilibrium thermodynamics such as heat temperature and entropy The second division focuses on the fundamentals of modern thermodynamics free energy chemical potential and the partition function The second half of the book is then designed with the flexibility to meet the needs of both the instructor and the students with a third section focused on the different types of gases ideal Fermi Dirac Bose Einstein Black Body Radiation and the Photon gases In the fourth and final division of the book modern thermostatistical applications are addressed semiconductors phase transitions transport processes and finally the new chapters on non equilibrium and biological systems Key Features Provides the most readable thorough introduction to statistical physics and thermodynamics with magnetic atomic and electrical systems addressed alongside development of fundamental topics at a non rigorous mathematical level Includes brand new chapters on biological and chemical systems and non equilibrium thermodynamics as well as extensive new examples from soft condensed matter and correction of typos from the prior edition Incorporates new numerical and simulation exercises throughout the book Adds more worked examples problems and exercises Bayesian Analysis of Stochastic Process Models David Insua,Fabrizio Ruggeri, Mike Wiper,2012-05-07 Bayesian analysis of complex models based on stochastic processes has in recent years become a growing area This book provides a unified treatment of Bayesian analysis of models based on stochastic processes covering the main classes of stochastic processing including modeling computational inference forecasting decision making and important applied models Key features Explores Bayesian analysis of models based on stochastic processes providing a unified treatment Provides a thorough introduction for research students Computational tools to deal with complex problems are illustrated along with real life case studies Looks at inference prediction and decision making Researchers graduate and advanced undergraduate students interested in stochastic processes in fields such as statistics operations research OR engineering finance economics computer science and Bayesian analysis will benefit from reading this book With numerous applications included practitioners of OR stochastic modelling and applied statistics will also find this book useful **Loss Models** Stuart A. Klugman,Harry H. Panjer,Gordon E. Willmot,2012-09-04 Praise for the Third Edition This book provides in depth coverage of modelling techniques used throughout many branches of actuarial science The exceptional high standard of this book has made it a pleasure to read Annals of Actuarial Science Newly organized to focus exclusively on material tested in the Society of Actuaries Exam C and the Casualty Actuarial Society s Exam 4 Loss Models From Data to Decisions Fourth Edition continues to supply actuaries with a practical approach to the key concepts and techniques needed on the job With updated material and extensive

examples the book successfully provides the essential methods for using available data to construct models for the frequency and severity of future adverse outcomes The book continues to equip readers with the tools needed for the construction and analysis of mathematical models that describe the process by which funds flow into and out of an insurance system Focusing on the loss process the authors explore key quantitative techniques including random variables basic distributional quantities and the recursive method and discuss techniques for classifying and creating distributions Parametric non parametric and Bayesian estimation methods are thoroughly covered along with advice for choosing an appropriate model New features of this Fourth Edition include Expanded discussion of working with large data sets now including more practical elements of constructing decrement tables Added coverage of methods for simulating several special situations An updated presentation of Bayesian estimation outlining conjugate prior distributions and the linear exponential family as well as related computational issues Throughout the book numerous examples showcase the real world applications of the presented concepts with an emphasis on calculations and spreadsheet implementation A wealth of new exercises taken from previous Exam C 4 exams allows readers to test their comprehension of the material and a related FTP site features the book's data sets Loss Models Fourth Edition is an indispensable resource for students and aspiring actuaries who are preparing to take the SOA and CAS examinations The book is also a valuable reference for professional actuaries actuarial students and anyone who works with loss and risk models To explore our additional offerings in actuarial exam preparation visit www.wiley.com/go/c4actuarial
