Abstract *Background:* The purpose of this study was to determine the prevalence of self-reported mental health problems among a representative sample of the adult population of the United Kingdom. *Methods:* Data were obtained from the 2007 British Household Panel Survey, a nationally representative, longitudinal survey of the British population. *Results:* The prevalence of self-reported mental health problems was 12.1% (95% CI 11.5–12.7%). The prevalence of self-reported mental health problems was higher among those aged 16–24 years (15.1%, 95% CI 14.2–16.0%) than among those aged 25–64 years (11.5%, 95% CI 10.9–12.1%) and those aged 65 years and over (8.8%, 95% CI 8.2–9.4%). The prevalence of self-reported mental health problems was higher among those who were unemployed (14.1%, 95% CI 13.3–14.9%) than among those who were employed (10.8%, 95% CI 10.2–11.4%). The prevalence of self-reported mental health problems was higher among those who were living alone (13.1%, 95% CI 12.3–13.9%) than among those who were living with others (10.8%, 95% CI 10.2–11.4%). The prevalence of self-reported mental health problems was higher among those who were living in a rented property (13.1%, 95% CI 12.3–13.9%) than among those who were living in a owned property (10.8%, 95% CI 10.2–11.4%). The prevalence of self-reported mental health problems was higher among those who were living in a deprived area (13.1%, 95% CI 12.3–13.9%) than among those who were living in a non-deprived area (10.8%, 95% CI 10.2–11.4%). *Conclusions:* The prevalence of self-reported mental health problems was higher among those who were aged 16–24 years, unemployed, living alone, living in a rented property, living in a deprived area, and living in a deprived area. *Keywords:* Mental health problems, Prevalence, Self-reported, United Kingdom.

Abstract The purpose of this study was to determine whether the use of a computerized decision support system (DSS) improved the performance of a group of students in a complex, multi-step problem-solving task. The study was conducted in a classroom setting where students were assigned to groups and given a complex problem to solve. The DSS was designed to provide students with a structured approach to solving the problem, including a list of possible solutions and a decision-making process. The results of the study showed that the use of the DSS significantly improved the performance of the students, as measured by the time taken to solve the problem and the quality of the solution. The study also found that the DSS was used by all groups, and that the use of the DSS was associated with a higher level of student engagement and participation. The study has implications for the use of DSS in education, particularly in the context of complex problem-solving tasks.

Abstract The purpose of this study was to investigate the effect of a 12-week training program on the physical and psychological health of elderly people. The study was conducted in a community center in Tehran, Iran. The participants were 30 elderly people (mean age = 70.5 years) who were randomly divided into two groups: a control group (n = 15) and an intervention group (n = 15). The intervention group participated in a 12-week training program that included aerobic exercise, strength training, and flexibility exercises. The control group did not participate in any training program. The physical health of the participants was measured using a series of tests, including a 6-minute walk test, a 30-second chair stand test, and a handgrip strength test. The psychological health of the participants was measured using a series of tests, including a Beck Depression Inventory (BDI) and a State-Trait Anxiety Inventory (STAI). The results of the study showed that the intervention group had significantly higher scores on the physical and psychological health tests compared to the control group. The 12-week training program had a positive effect on the physical and psychological health of elderly people.

Abstract: This paper presents a new approach to the problem of finding the optimal solution to a problem. The approach is based on the use of a genetic algorithm (GA) to search for the optimal solution. The GA is a stochastic search algorithm that mimics the process of natural selection. It starts with a population of random solutions and iteratively improves them by selecting the fittest individuals and crossing them to produce offspring. The process continues until a satisfactory solution is found. The paper describes the implementation of the GA and presents the results of experiments conducted on a set of test problems. The results show that the GA is able to find the optimal solution to the problems in a relatively short time and with a high degree of accuracy.
