Current Ornithology Volume 1 Current Ornithology:

Current Ornithology Richard Johnston, 2013-11-11 The appearance of the first volume of a projected series is the occasion for comment on scope aims and genesis of the work The scope of Current Ornithology is all of the biology of birds Ornithology as a whole organism science is concerned with birds at every level of biological organization from the molecular to the community at least from the Jurassic to the present time and over every scholarly discipline in which bird biology is done to say this is merely to expand a dictionary definition of ornithology The aim of the work to be realized over several volumes is to present reviews or position statements concerning the active fields of ornithological research The reviews will be relatively short and often will be done from the viewpoint of a readily identified group or school Such a work could have come into being at any time within the past fifty years but that Current Ornithology appears now is a result of events that are only seven to eight years old One important event was the initiation in 1975 1976 of the Workshop on a National Plan for Ornithology under the directorship of James R King and Walter J Bock cosponsored by the American Ornithologists Union and the National Science Foundation Part of the Workshop's interests lay in publications resources and certain kinds of information on publications were obtained by means of a questionnaire Current Ornithology Volume 17 Charles F. Thompson, 2010-09-09 Current Ornithology publishes authoritative up to date scholarly reviews of topics selected from the full range of current research in avian biology Topics cover the spectrum from the molecular level of organization to population biology and community ecology The series seeks especially to review 1 fields in which an abundant recent literature will benefit from synthesis and organization or 2 newly emerging fields that are gaining recognition as the result of recent discoveries or shifts in perspective or 3 fields in which students of vertebrates may benefit from comparisons of birds with other classes All chapters are invited and authors are chosen for their leadership in the subjects under review

Monitoring Bird Populations by Point Counts C. John Ralph, John R. Sauer, Sam Droege, 1998-05 Point counts of birds are the most widely used quantitative method and involve an observer recording birds from a single point for a standardized time period In response to the need for standardization of methods to monitor bird populations by census researchers met to present data from various investigations working under a wide variety of conditions and to examine various aspects of point count methodology Statistical aspects of sampling and analysis were discussed and applied to the objectives of point counts The final chapter presents these standards and their applications to point count methodology **Guide to Reference and Information Sources in the Zoological Sciences** Diane Schmidt, 2003-11-30 Animals have been studied for centuries But what are the most important and relevant reference and information sources in the zoological sciences This work is a comprehensive thoroughly annotated directory filled with hundreds of esteemed resources published in the field of zoology including indexes abstracts bibliographies journals biographies and histories dictionaries and encyclopedias textbooks checklists and classification schemes handbooks and field guides associations and Web sites A complete revision of the award

winning Guide to the Zoological Literature The Animal Kingdom 1994 this new title includes extensive up to date coverage of invertebrates arthropods vertebrates fishes amphibians and reptiles birds and mammals In addition the work features a detailed introduction by the author as well as thorough subject title and author indexes Students and researchers can now quickly and easily pinpoint works in their field of study The book is of equal importance to LIS students specializing in science or biology librarianship as it provides a comprehensive straight forward overview of zoological information sources An essential addition to the core reference collection of public and academic libraries **US Route 6, Bolton, Coventry, Andover, and Columbia, from I-384 at Bolton Notch to Windham** ,1994 Birds of Two Worlds Russell

Greenberg, Peter P. Marra, 2005-05-02 For centuries biologists have tried to understand the underpinnings of avian migration where birds go and why why some migrate and some do not how they adapt to a changing environment and how migratory systems evolve Twenty five years ago the answers to many of these questions were addressed by a collection of migration experts in Keast and Morton s classic work Migrant Birds in the Neotropics In 1992 Hagan and Johnston published a follow up book Ecology and Conservation of Neotropical Migrant Landbirds In Birds of Two Worlds Russell Greenberg and Peter Marra bring together the world s experts on avian migration to discuss its ecology and evolution The contributors move the discussion of migration to a global stage looking at all avian migration systems and delving deeper into the evolutionary foundations of migratory behavior Readers interested in the biology behavior ecology and evolution of birds have waited a decade to see a worthy successor to the earlier classics Birds of Two Worlds will complete the trilogy and become indispensable for ornithologists evolutionary biologists serious birders and public and academic libraries **The Ecology and Management of Breeding Waterfowl** ,1992 **Wildlife Review** ,1988 **Restoring North America's Birds**

Robert A. Askins, 2008-10-01 DIVThe decline of bird species in a wide range of North American habitats forests prairies shrublands mountain regions marshes and deserts has inspired two decades of intense scientific study of bird ecology and conservation But for professional scientists and amateur birders alike interpreting the results of these diverse studies is often complex and bewildering This accessible book pulls together recent research on bird species and habitats to show how basic ecological principles apply in seemingly different situations Robert A Askins provides an engaging introduction to bird ecology and concepts of landscape ecology focusing on such intriguing species as Bachman s Warbler Red Crossbill Mountain Plover and Marbled Murrelet Understanding the ancient landscapes of North America and how humans have changed them Askins says is essential for devising plans to protect and restore bird populations In addition to such obvious changes to the landscape as the clearing of forests and plowing of prairies more subtle changes also dramatically affect birds Species may disappear when we interrupt natural disturbances by suppressing wildfires or trapping out beaver or when we disrupt habitat with roads and housing developments Askins challenges some of the assumptions that underlie current conservation efforts and offers concrete recommendations based on sound ecological principles for protecting the rich natural diversity of
