Regulation of Carbohydrate Metabolism(1985) Beitner,2018-04-17 First Published in 1985 A collaboration of the latest research on regulation of carbohydrate metabolism *Nutrition and Gene Expression* Carolyn D. Berdanier,2018-01-18 Nutrition and Gene Expression is devoted to exploring the tissue specific and developmental aspects of the interaction between nutrients and the genome The book discusses chemical sensitivity in relation to the ability of cells to detect nutrients reviews the means by which lower organisms respond to nutrients and provides examples on how each of the classes of nutrients affects genetic transcription mRNA translation or stability The receptor mediated actions of vitamin D and retinoic acid on gene expression are discussed including the case of bone formation and dissolution Other important topics covered in the volume include newly discovered effects of fatty acids on regulating gene expression the effects of diet on mRNA editing the interplay between dietary carbohydrates and proteins in regulating metabolism of liver cells the effects of metal ions on protein synthesis and much more Nutrition and Gene Expression is an important reference for nutritionists physiologists biochemists clinical nutritionists pharmaceutical researchers geneticists and food scientists **Transport in Plants III** C.R. Stocking,U. Heber,2012-12-06 The problems associated with the movement of water and solutes throughout the plant body have intrigued students of plants since Malpighi s conclusions in 1675 and 1679 that nutrient sap flows upward and downward in stems through vessels in both wood and bark Steven Hale s ingenious experiments on the movement of water in plants in 1726 and Hartig s observations of sieve tube exudation in the mid 19th century set the stage for continued intensive studies on long range transport in plants In spite of this interest for more than 200 years in the movement of solutes and water in plants it has only been within the last 20 to 30 years that extensive research effort has been directed toward a critical evaluation of the interactions among the various cellular organelles The important roles played by the exchange of metabolites in the control and regulation of cellular processes is now widely recognized but in most instances poorly understood **Advances in Enzymology and Related Areas of Molecular Biology** Alton Meister,2009-09-15 Advances in Enzymology and Related Areas of Molecular Biology is a seminal series in the field of biochemistry offering researchers access to authoritative reviews of the latest discoveries in all areas of enzymology and molecular biology These landmark volumes date back to 1941 providing an unrivaled view of the historical development of enzymology The series offers researchers the latest understanding of enzymes their mechanisms reactions and evolution roles in complex biological process and their application in both the laboratory and industry Each volume in the series features contributions by leading pioneers and investigators in the field from around the world All articles are carefully edited to ensure thoroughness quality and readability With its wide range of topics and long historical pedigree Advances in Enzymology and Related Areas of Molecular Biology can be used not only by students and researchers in molecular biology biochemistry and enzymology but also by any scientist interested in the discovery of an enzyme its properties and its

applications **Dynamic Aspects of Conformation Changes in Biological Macromolecules** C. Sadron, 2012-12-06 On the day after the 1959 Cambridge Congress during which the International Union of Pure and Applied Biophysics was founded a biophysics section was formed within the Society of Physical Chemistry Societe de Chimie Physique Since then three of the Society's annual meetings the 11th 17th and 23rd were devoted exclusively to the physico chemical study of biological systems The first of these was held in June 1961 at a hotel in Col de Voza at the foot of an alpine glacier above Chamonix The second in May 1967 took place in the more learned setting of the venerable rooms of the National Museum of Natural History in Paris The third the one dealt with in the present volume was recently held at Orleans La Source in the newly built lecture theatres of the young University which is near the great Institutes of the National Centre for Scientific Research CNRS on the Sologne plateau These three stages are milestones of an evolution which characterises at least schematically the explosive evolution of biological physico chemistry The first colloquium with the title Deoxyribonucleic Acid Structure Synthesis and Functions actually marks the first contact of the physical chemist with one of the then most prestigious biological macromolecules the structure of which had just been discovered and in this way celebrated one of the first and most striking successes of molecular biology *Progress in Phytochemistry* L. Reinhold, J. B. Harborne, T. Swain, 2016-10-13 *Progress in Phytochemistry* Volume 4 deals with developments in phytochemistry and covers topics ranging from the pathway of nitrogen assimilation in plants to the biochemistry of plant amines and functions of steroids in plants The naturally occurring cyanogenic glycosides are also considered along with transfer RNA and aminoacyl transfer RNA synthetases from higher plants This volume is comprised of eight chapters and begins with a discussion on the pathway of nitrogen assimilation in plants and the enzymes involved in the process with particular reference to glutamate synthase The reader is then introduced to advances in the biochemistry of plant amines the naturally occurring cyanogenic glycosides phenylalanine ammonia lyase and natural products such as flavonoid sulfates and sesquiterpenes The final chapter focuses on steroid functions in plants giving emphasis to sterols steroidal sapogenins and alkaloids pregnane derivatives cardiac glycosides and sex hormones This book will be of interest to phytochemists as well as non specialists who want to obtain a clear picture of the problems involved in phytochemistry **Books in Print Supplement** ,1994 [Proceedings of the International Symposia of the Princess Takamatsu Cancer Research Fund, Volume 13 ADP-Ribosylation, DNA Repair and Cancer](#) Sugimura, Miwa, Hayaishi, Shall, Smulson, 2020-07-26 *Proceedings of the 13th International Symposium of The Princess Takamatsu Cancer Research Fund* held in Tokyo The proceedings deal with the potential relevance of ADP ribosylation reactions in the genesis prevention and treatment of cancer These reactions were independently discovered in the laboratories of Paul Mandel Osamu Hayaishi and Takashi Sugimura all whom contribute to ADP Ribosylation DNA Repair and Cancer Apart from these renowned scientists many other outstanding researchers from the international research community have contributed chapters discussing their most recent research results **Fuzziness** Monika Fuxreiter, Peter

Tomba,2012-03-07 Detailed characterization of fuzzy interactions will be of central importance for understanding the diverse biological functions of intrinsically disordered proteins in complex eukaryotic signaling networks In this volume Peter Tomba and Monika Fuxreiter have assembled a series of papers that address the issue of fuzziness in molecular interactions These papers provide a broad overview of the phenomenon of fuzziness and provide compelling examples of the central role played by fuzzy interactions in regulation of cellular signaling processes and in viral infectivity These contributions summarize the current state of knowledge in this new field and will undoubtedly stimulate future research that will further advance our understanding of fuzziness and its role in biomolecular interactions

Principles of Metabolic Control in Mammalian Systems Herman,2013-11-11 In this work we present the basic principles of metabolic control which we hope will serve as a foundation for the vast array of factual matter which the biochemist and the physician engaged in metabolic research must accumulate Accordingly we attempt to set forth these principles along with sufficient explanation so that the reader may apply them to the ever expanding literature of biochemistry If we are successful this will provide a theoretical approach which can be applied to any given set of metabolic reactions It is impossible to enumerate each and every biochemical reaction and pathway since such a work would be too unwieldy for efficient use Rather we hope our presentation of the principles of metabolic control will be sufficiently basic to be of lasting usefulness no matter how detailed biochemistry may become We would like to be able to condense biochemistry into a theoretical biology that will not only allow for the general treatment of any given reaction but will enable predictions to be made as to the existence of necessary pathways and the consequences of altered control Such is not possible today but this may be accomplished in the future We believe it is now possible to institute the beginnings of such a theoretical biology

Isoenzymes C. C. Rider,2013-03-09 Isoenzymes were discovered 20 years ago and were at first regarded as interesting but rare occurrences Since then a wealth of information on enzyme heterogeneity has accrued and it now seems likely that at least half of all enzymes exist as isoenzymes This is important in many areas of biological and

medical science Thus isoenzyme studies have provided the main experimental substance for the neutral drift controversy in genetics and evolution they have greatly extended our understanding of metabolic regulation not only in animals but also in bacteria and plants their existence has made available a multitude of highly sensitive markers for the study of differentiation and development as well as providing indices of aberrant gene expression in carcinogenesis and other pathological processes Iso enzymes are also being used increasingly in diagnostic clinical bio chemistry It is surprising that this phenomenon which affects such a high proportion of enzymes and is clearly important in biochemistry should receive such scant attention in the standard textbooks of that subject the formal treatment of isoenzymology in these rarely exceeding one or two pages This may be because the pure biochemist has tended to regard variation in enzyme properties between tissues more as an unwanted complication than as a potential source of insight into diversity of biological function

Cross, 2014-06-28 Current Topics in Cellular Regulation Volume 24 Enzyme Catalysis and Control is a compendium of papers that discusses phosphoryl transfer reactions the role of water on the free energy of hydrolysis of pyrophosphate and the hormonal actions of vitamin D Other papers describe the regulation lipid metabolism by a lipid carrying protein the GABA and taurine enzymes in mammalian brain One paper examines the role of vitamin D in the metabolism of cells as well as in the whole animal Upon absorption in the body the vitamin undergoes various metabolic transformations before interacting with specific receptors and then inducing the genome in the target tissues to generate biological and hormonal responses Another paper notes the possibility of a genetic defect in cancer cells that results in the abnormal accumulation of sterol carrier protein SCP and cholesterol in vivo and also in the inability to maintain levels of SCP or cholesterol in vitro One paper shows that tartrate or other organic acids secreted into the medium by the penicillia keeps the pH in an optimal range for acid protease degradation of proteins and glycoproteins This mechanism helps the fungus to survive in a nutrient environment which is unbalanced with respect to an optimum C N ratio and at a pH unfavorable to many bacteria and other life forms Another paper proposes a model for the modulation of ATP synthetase activities and medium exchange reactions by energy input substrate concentration or others that affect the microenvironment of the enzyme under certain conditions The compendium will prove beneficial to molecular biologists general biologists microbiologists and biochemists Modulation of Protein Function Daniel Atkinson, 2012-12-02 Modulation of Protein Function Volume XIII presents the proceedings of the ICN UCLA Symposium on Molecular and Cellular Biology held in Keystone Colorado from February 25 March 2 1979 The symposium aimed to bring together workers from several fields all of which deal with the modulation of protein function The discussion of representative metabolic control systems ranging from single enzyme

responses to complex regulatory cascades and the control of photosynthesis and of protein synthesis and enzyme inactivation dealt with the general topic at perhaps its most fundamental cellular level. Modulations and conformational changes in proteins that underlie higher level interactions such as those involved in cyclic nucleotide function sensing and chemotactic response to foreign materials and the complement system were also described. Two talks dealt with potential clinical relevance of phenomena of the types described by other participants. The book is organized into nine parts with papers covering the following topics: modulation of enzymes of intermediary metabolism. Part I: modulation and inactivation. Part II: photosynthesis and storage polysaccharides. Part III: cascade systems. Part IV: protein phosphorylation. Part V: methylation in chemotaxis. Part VI: cyclic GMP and cyclic CMP. Part VII: protein synthesis. Part VIII: and clinical implications. IX. The Year in Metabolism 1977 Norbert Freinkel, 2012-12-06. In the words of Disraeli: To be conscious that you are ignorant of the facts is a great step to knowledge. For most of us the conscious awareness of relative ignorance is an uncomfortable aspect of daily life. New data appear in such inexorable profusion that the necessity for continuous retooling has joined death and taxes as an inescapable component of our destinies. Perhaps it is this consciousness of ignorance that accounts for the success of the preceding volumes of this new series. The Year in Metabolism and The Year in Endocrinology series were introduced with the avowed intention of providing an efficient and enjoyable bridge between those who are creating new knowledge at the bedside and the professional consciousness of those for whom such knowledge is ultimately intended. That objective seems particularly appropriate at a time when the award of the 1977 Nobel Prize in Medicine or Physiology to Guillemin, Schally, and Yalow has served to emphasize the epoch making advances that have characterized the recent course of endocrinology and metabolism. For the 1977 volume of The Year in Metabolism the previous formula has been preserved. The same internationally recognized authorities again have contributed commentaries about the progress in their areas of expertise. They have been joined by Drs Jack W. Coburn, David L. Hartenbower, and Charles R. Kleeman who have provided a new section on Divalent Ion Metabolism. Modulation by Covalent Modification Shmuel Shaltiel, P. Boon Chock, 2014-06-28. Current Topics in Cellular Regulation, Volume 27. Modulation by Covalent Modification is a compendium of papers dealing with the coordination function or control of cellular metabolism, particularly on modulation by covalent modification. One paper reviews the cyclic cascade model in metabolic regulation that shows the model's applicability to all covalent interconvertible enzyme systems such as those modified by phosphorylation, ADP-ribosylation, carboxymethylation, acetylation, and sulfation. Another paper discusses the hypothesis that smooth muscle contraction is regulated by a calcium dependent phosphorylation of the myosin molecule. Studies made by Sellers and Pato suggest that a phosphatase isolated from turkey gizzard muscle, known as smooth muscle phosphatase IV, can be related to an in vivo myosin phosphatase as the phosphatase IV binds well to both myosin and thiophosphorylated myosin. Other papers describe in situ regulation studies of *Escherichia coli* glutamine synthetase, the posttranslational processing of the insulin proreceptor, and selenium in cellular metabolism. The compendium is suitable for
