 Bernard,R. Paul,M. Boiron,C. Jacquillat,R. Maral,2012-12-06 Trials in the treatment of the leukemias are sometimes based on  
 a hypothesis as in the case of exchange transfusion 33 or the use of antimetabolites 86 Or they are conducted empirically as  
 the results of chance observations as in the case of the use of the nitrogen mustards urethane and the Vinca alkaloids Or they  
 lie between the two aiming at making use of well established biological facts examples are the use of ACTH cortisone and  
 more recently the antibiotics What is true for bacteria may also perhaps be true if not for elephants at least for the malignant  
 cells of mammals It was this idea that lay behind the first attempts at treating cancer and leukemia with antibiotics The  
 results obtained by the use of certain substances extracted from micro organisms actinomycin azaserine mito mycin  
 rufocromomycin although encouraging at times were inconsistent The action of rubidomycin appears to cover a wider  
 spectrum and to be more consistent and more effective As in the case of Homer and Christopher Columbus the honor of  
 having given birth to rubidomycin is claimed by more than one country and town In fact the same product was discovered in  
 the same year though quite independently by a group of French workers 184 who described it under the name of  
 rubidomycin and by a group of Italian workers 87 who studied it under the name of daunomycin      *Coal Lease Sale*
