assumptions about crimes are awed unrealistic and implausible to explain this new form of criminality The empirical records regarding crime patterns and strategies to avoid and fight crimes run counter to the functioning of the cyberworld The elds of hacking and cybercrime have also undergone political social and psychological metamorphosis The cybercrime industry is a comparatively young area of inquiry While there has been an agreement that the global cybercrime industry is tremendously huge little is known about its exact size and structure Very few published studies have examined economic and institutional factors that influence strategies and behaviors of various actors associated with the cybercrime industry Theorists are also debating as to the best way to comprehend the actions of cyber criminals and hackers and the symbiotic relationships they have with various players
