Cyber Policy In China China Today:

Cyber Policy in China Greg Austin, 2014-10-07 Few doubt that China wants to be a major economic and military power on the world stage To achieve this ambitious goal however the PRC leadership knows that China must first become an advanced information based society But does China have what it takes to get there Are its leaders prepared to make the tough choices required to secure China s cyber future Or is there a fundamental mismatch between China s cyber ambitions and the policies pursued by the CCP until now This book offers the first comprehensive analysis of China s information society It explores the key practical challenges facing Chinese politicians as they try to marry the development of modern information and communications technology with old ways of governing their people and conducting international relations Fundamental realities of the information age not least its globalizing character are forcing the pace of technological change in China and are not fully compatible with the old PRC ethics of stability national industrial strength and sovereignty What happens to China in future decades will depend on the ethical choices its leaders are willing to make today The stakes are high But if China s ruling party does not adapt more aggressively to the defining realities of power and social organization in the information age the China dream looks unlikely to become a reality **Cyber Governance in China** Cuihong

Florian Schneider,2018-08-16 Nationalism in China as much as elsewhere is today adopted filtered transformed enhanced and accelerated through digital networks And as we have increasingly seen nationalism in digital spheres interacts in

complicated ways with nationalism on the ground. If we are to understand the social and political complexities of the twenty first century we need to ask what happens to nationalism when it goes digital. In *China's Digital Nationalism* Florian Schneider explores the issue by looking at digital China first hand exploring what search engines, online encyclopedias, websites, hyperlink networks and social media can tell us about the way that different actors construct and manage a crucial topic in contemporary Chinese politics: the protracted historical relationship with neighbouring Japan. Using two cases: the infamous Nanjing Massacre of 1937 and the ongoing disputes over islands in the East China Sea, Schneider shows how various stakeholders in China construct networks and deploy power to shape nationalism for their own ends. These dynamics provide crucial lessons on how nation states adapt to the shifting terrain of the digital age and highlight how digital nationalism is today an emergent property of complex communication networks.

Emerging Cyber Threats and Cognitive Vulnerabilities Vladlena Benson, John McAlaney, 2019-09-20. *Emerging Cyber Threats and Cognitive Vulnerabilities* identifies the critical role human behavior plays in cybersecurity and provides insights into how human decision making can help address rising volumes of cyberthreats. It applies psychological factors such as motivations, group processes and decision making heuristics that may lead individuals to underestimate risk. The goal of this understanding is to more quickly identify threat and create early education and prevention strategies. This book covers a variety of topics and addresses different challenges in response to changes in the ways in which to study various areas of decision making: behavior, artificial intelligence and human interaction in relation to cybersecurity. Explains psychological factors inherent in machine learning and artificial intelligence. Discusses the social psychology of online radicalism and terrorist recruitment. Examines the motivation and decision making of hackers and hacktivists. Investigates the use of personality psychology to extract secure information from individuals.
