Diabetes Mellitus the scope of the problem

■ Incidence & Prevalence

- More than 18 million Americans have diabetes (17 million diagnosed)
- 5 million do not even know they have diabetes
- Each year, at least 190,000 people die as a result of diabetes or a related complication

■ Historical Perspective of Diabetes Mellitus

- Diabetes is a serious disease that has been known for thousands of years and is described in the earliest medical writings, circa 1400 BC.
- The Greek physician Aretaeus of Cappadocia (126-200 A.D.) first called the disease *diabetes*, which means to "syphon or flow through", referring to the increased flow of urine; later, the Latin word *mellitus*, which means "honeyed", was added to indicate the presence of sugar in the urine.
- In the 1480s, a German doctor named Paul Langerhans discovered the *islets of Langerhans* within the pancreas; it was later found that this is where insulin is produced, stored and released.
- In the 1890s the first really significant experiment occurred when Oscar Minkowski and Joseph von Mering discovered that, when the pancreas of a dog was removed, the animal began urinating more frequently, sugar appeared in the urine, and the animal eventually died.
- A major breakthrough in the treatment of diabetes occurred in 1921 when a group of researchers isolated an extract that came from the *islets* of the pancreas and was first referred to as "isletin," but later became known as *insulin*. Dr. Frederick Grant Banting received the Nobel prize for medicine in 1927 for this discovery.
- In the late 1940s and early 1950s, after World War II, extensive research resumed.
- In the mid-1960s the American Diabetes Association (ADA) found that hypertension, coronary heart disease, and head/neck agencies most not interested in diabetes, the perception was that diabetes was relatively uncommon and easy to manage with very little effect on a person's life.
- In 1974, Congress established a National Diabetes Commission to assess the potential and financial impact of diabetes; the results were:
 - At least 18 million Americans had diabetes in 1974.
 - Diabetes was the 3rd leading cause of death by disease at that time.
 - Diabetes was the leading cause of blindness among people over age 20.
 - People with diabetes were twice as likely as others to develop heart disease and suffer a heart attack or stroke.
 - People with diabetes were 17 times more prone to kidney disease.
 - People with diabetes were 49 times more likely to need amputations.
- The estimated annual cost of diabetes in the U.S. in 1973 was more than \$5 billion.
- Since this information was released, more than 2.6 million new cases of diabetes have been detected, and the cost of the disease to the nation has risen to approximately \$7.7 billion dollars annually.

Diabetes Mellitus defined

■ Review of Normal Body Functions

- Sugar comes from 2 places – internal sugar comes from our body's own production in the liver and external sugar comes from the food we eat.
- When the liver releases internal sugar, or external sugar is produced by digestion of food, the sugar enters the blood stream.
- The sugar in the blood must enter the body cells before the cells can use it to produce energy.
- Insulin, a substance released from the pancreas, helps the sugar leave the blood and go into the body cells; insulin has 2 functions:
 - Allows sugar (from external or internal production) to pass into cells where it can be used for energy.
 - Turns off excess internal sugar production in liver and muscle.
- The sugar can then be used as fuel for the cells; the level of sugar in the blood is reduced as the sugar goes from the blood into the cell.
- Insulin acts like a "key" to allow sugar from the blood stream to enter the cells where it can be used.
- With diabetes, this process is disrupted.
- A person who has diabetes does not have the key to allow sugar to move from the blood into the cells.

DID YOU KNOW? Diabetes is a chronic disease that can lead to serious complications if not managed properly. It is a leading cause of heart disease, kidney failure, blindness, and amputation. Diabetes is a preventable disease.

2 Types of Diabetes Mellitus

■ Type 1 Diabetes Mellitus

- Also referred to as *insulin-dependent diabetes mellitus* (IDDM) or *juvenile diabetes*.
- The body makes little or no insulin.
- People with type 1 diabetes must take insulin shots to live.
- Less than 10% of people with diabetes have type 1.
- Because of the lack of insulin, the sugar in the blood cannot pass into the body's cells to be used as fuel; instead, the blood sugar rises to a high level and overflows through the kidneys into the urine; when sugar enters the urine, water must go out with the sugar.
