## **Diabetes Chapter 2 Cerebral Ischemia In Diabetics And Oxidative Stress:**

*Diabetes* Perry Fuchs, Miguel A. Perez-Pinzon, Kunjan R. Dave, 2013-10-29 Cerebral ischemia is one of the major complications of diabetes Eighty four percent of diabetics die from either heart disease or stroke both cause cerebral ischemia Diabetes induced oxidative stress is one of the factors responsible for the secondary complications of diabetes Oxidative stress also plays a key role in cerebral ischemic damage In this chapter we provide a literature review of how cerebral ischemia induced oxidative stress is exacerbated in diabetics We also provide correlates of how this increased oxidative stress may be responsible for increased cerebral ischemia damage in diabetics **Diabetes** Victor R

Preedy, 2013-10-29 *Diabetes Oxidative Stress and Dietary Antioxidants* bridges the trans disciplinary divide among diabetologists endocrinologists and nutritionists in understanding and treating diabetes The book covers in a single volume the science of oxidative stress in diabetes and the potentially therapeutic use of natural antioxidants in the diet or food matrix The processes within the science of oxidative stress are described in concert with other processes such as apoptosis cell signaling receptor mediated responses and more This approach recognizes that diseases are usually multifactorial and that oxidative stress is a single component of this Pharmacological treatments for diabetes are commonly marked by unwanted side effects leading to treatment efforts using naturally occurring substances But a plant based approach alone is not sufficient understanding the processes inherent in the oxidative stress of diabetes is vital for clinical workers dietitians and nutritionists This translational work provides that understanding The book begins by covering the basic biology of oxidative stress from molecular biology to imaging in relation to diabetes There are chapters on neuropathy nephropathy atherosclerosis cardiomyopathy and retinopathy The book then moves on to antioxidants in foods including plants components of the diet and their relevance to diabetes Nutritionists will use the information related to mitochondrial oxidative stress in one disease and propose new diet related strategies to prevent such conditions arising in another unrelated disease Dietitians will prescribe new foods or diets containing antioxidants for conditions that are refractory by conventional pharmacological treatments Dietitians after learning about the basic biology of oxidative stress will be able to suggest new treatments to their multidisciplinary teams Nutritionists and dietitians will learn about cell signaling and will be able to suggest preventive or therapeutic strategies with antioxidant rich foods to reduce damage done by diseases involving abnormal cell signaling Antidiabetic Medicinal Plants and Herbal Treatments Azamal Husen, 2023-07-17 Diabetes is a

chronic condition associated with metabolic disorder Persons suffering from diabetes have shown accelerated levels of blood sugar which often harms the heart blood vessels eyes kidneys and nerves Over the past few decades the prevalence of diabetes has been progressively increasing Synthetic drugs are used to treat diabetic patients to help control the disorder but it is shown that numerous medicinal plants and herbal drugs are widely used in several traditional systems of medicine to prevent and treat diabetes They are reported to produce beneficial effects in combating diabetes and alleviating diabetes

related complications These plants contain phytonutrients and phytoconstituents demonstrating protective or disease preventive properties In many developing countries herbal drugs are recommended by traditional practitioners for diabetes treatment because the use of synthetic drugs is not affordable Key Features Provides botanical descriptions distribution and pharmacological investigations of notable medicinal and herbal plants used to prevent or treat diabetes Discusses phytochemical and polyherbal formulations for the management of diabetes and other related complications Contains reports on antidiabetic plants and their potential uses in drug discovery based on their bioactive molecules This volume in the Exploring Medicinal Plants series provides an overview of natural healing treatments in selected antidiabetic plants The book presents valuable information to scientists researchers and students working with medicinal plants or for those specializing in areas of ethnobotany natural products pharmacognosy and other areas of allied healthcare It is also useful to pharmaceutical companies industrialists and health policy makers **Diabetes** William G. Chronic hyperglycemia is associated with type 1 diabetes and produces damage to many organ systems including the brain is a major cause of morbidity and mortality and is a major economic burden throughout the world Investigators have suggested that the damaging effects of diabetes on peripheral organs appear to be related to an increase in oxidative stress Alterations in the reactivity of large and small arteries may contribute to the progression of organ damage observed in diabetics The brain and the blood vessels within it are also susceptible to the damaging effects of hyperglycemia induced increases in oxidative stress Impaired dilation of cerebral vessels due to an increase in oxidative stress may contribute to the pathogenesis of diabetes induced complications of the brain including cognitive impairment and stroke Many naturally occurring compounds are capable of ameliorating oxidative stress in blood vessels thus producing an increase in overall vascular health We will focus on the positive influence of resveratrol on cerebral arterioles in type 1 diabetes We suggest an important therapeutic potential for resveratrol in treating diabetes induced cerebrovascular dysfunction including cognitive impairment and stroke Cerebral Ischemic Reperfusion Injuries (CIRI) Weijian Jiang, Wengui Yu, Yan
