Cancer of the Prostate and Kidney P. H. Smith, 2013-06-29 This book is the record of the proceedings of a NATO Advanced Study Institute held in Erice Sicily from the 2nd to 12th June 1981 during which scientists and clinicians interested in the problems presented by cancer of the kidney and the prostate were encouraged to present to discuss and to challenge the opinions expressed and the beliefs held by the different contributors It is uncommon for scientist physician and surgeon to meet with great regularity or for prolonged periods of time and it must be exceedingly rare for such people to immerse themselves in each other's work and company for a period of almost two weeks For this to occur in a situation of total isolation such as that provided by the marvellous Ettore Majorana Centre in Erice Sicily must be unique The fact that differences of opinion remain will be evident to all who read the book as will the wealth of scientific and clinical work being undertaken within and beyond the NATO countries We are very much indebted to the Science Committee of NATO for their recommendation for support for this meeting and to the Ente Fiuggi and to several pharmaceutical firms

Weill,Edmond Bihr,Paul Rohmer,Francois Zeltner,2012-12-06 Renal sonography forms a basic part of routine diagnostic strategy This textbook summarizes eighteen years of experience in diagnostic ultrasound We want it to

serve as a guide to both imagers and mere consumers of information That is why we shall emphasize practical advice and diagnostic pitfalls it is also why we shall often deal with the relations of sonography with other diagnostic procedures which it may complement or replace precede or follow the purpose being to achieve efficiency at low cost We shall limit our subject matter to the kidney itself and the neighboring retroperitoneal compartments dealing only briefly with the lower urinary tract which requires specialized procedures We devoted considerable space to renal sonography in our book Clinical Atlas of Ultrasonic Radiography published in 1973 Since then nothing has changed and everything has changed Nothing because even then the differential diagnosis between a solid and a cystic mass the etiologic diagnosis of a nonsecreting kidney and the positive diagnosis of a traumatic juxtarenal hematoma were quite reliable making possible drastic reductions in the indications for instrumental roentgenologic examinations Everything because improved resolution and grey scale imaging already partially achieved in 1973 thanks to real time have profoundly refined both anatomic and pathologic ultrasonic studies And now high resolution real time imaging has revolutionized renal examination techniques whereas Doppler is entering routine ultrasonic diagnosis
