

Hoofdstuk 1 Diagnostiek: inschatten van mensen

1.1 Besliskunde

Psychologen zijn niet de enigen die voortdurend voorspellingen moeten doen. Denk eens aan de volgende mensen, beroepen en rollen:

- Schoolhoofd
- Arts
- Weerman
- Beleggingsadviseur
- Verzekeringsadviseur
- Marketeer
- Personeelsfunctionaris
- Ect

Merk op dat in elk voorspellingsproces steeds twee variabelen een hoofdrol spelen, namelijk een beoordelingsmoment nu en een beoordelingsmoment ergens in de toekomst. In de psychodiagnostiek noemen we dit test en criterium. De mate waarin deze twee beoordelingen met elkaar overeenstemmen, zegt iets over de kwaliteit van je voorspellingen en je beoordelingsvermogen.

Predicatieve validiteit is een vorm van validiteit van een test of meting waarmee wordt aangegeven in hoeverre een test een criterium buiten de test kan voorspellen.

Valid positive is dat de voorspelling positief was en later ook waar bleek te zijn.

False positive is dat de voorspelling positief was maar niet bleek te kloppen.

Valid negative is dat de voorspelling negatief was en later ook waar bleek te zijn.

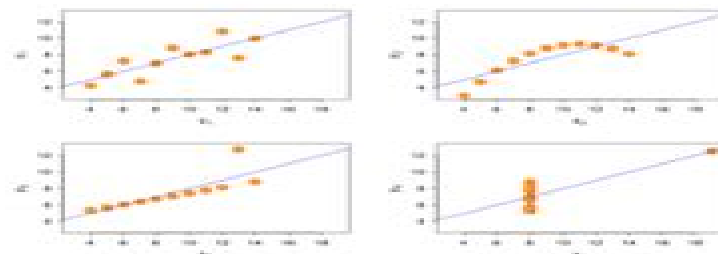

False negative is dat de voorspelling negatief was maar niet bleek te kloppen.

1.2 Correlaties

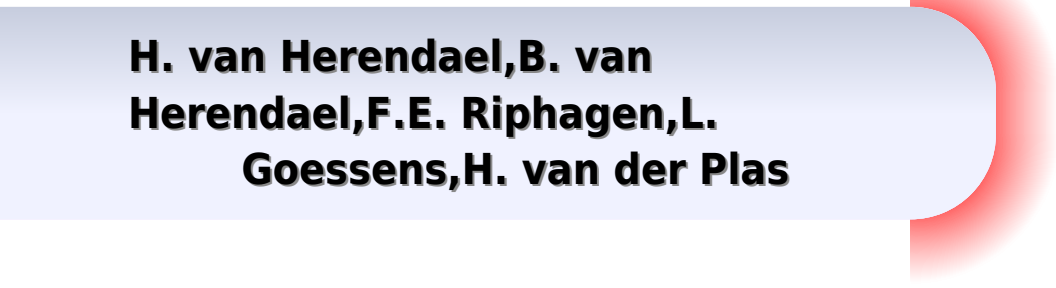

De correlatiecoëfficiënt is een getal tussen de 0 en 1.00 dat de sterkte tussen twee variabelen aangeeft.

In de menswetenschappen zullen we nooit perfecte relaties aantreffen. Hoe sterk de relatie tussen deze twee variabelen is, kan worden uitgedrukt in een correlatiecoëfficiënt. Onderzoekers hebben

Plancyclus in het sociaal-agogisch werk B. Fontaine, 2005 In de hulpverlening is handelen het belangrijkste wat je doet maar het is ook het laatste er gaat een denk en onderzoeksproces aan vooraf Vaak zijn hulpverleners al aan het handelen of oplossen wanneer ze ontdekken dat hun oplossing niet goed werkt Dit komt meestal doordat nog niet goed is onderzocht waar het probleem nu eigenlijk zit Ook kan het voorkomen dat de diagnose goed is gesteld maar dat er simpelweg niet naar wordt gehandeld Veelal ontbreekt dan een concrete planning En een diagnose zonder planning is als een auto zonder benzine er gebeurt niets Dit boek gaat over alle stappen die sociaal pedagogisch hulpverleners moeten nemen om verantwoord te handelen De stappen in het denkproces noemt auteur Fontaine de plancyclus Ze bespreekt de oriëntatiefase de onderzoeksfase de planningsfase de uitvoeringsfase en de evaluatiefase De stappen worden helder concreet en geordend geformuleerd Plancyclus biedt een praktische basismethodiek om het eigen handelen te sturen De stappen uit de cyclus zijn ook te gebruiken om samen met collega's en andere deskundigen kritisch de effecten van het eigen handelen te bekijken De methodiek biedt praktische houvast om tijdens besprekingen met de cliënt gemakkelijker tot een diagnose en oplossing te komen

A doctor's order. The Dutch Case of Evidence-Based Medicine (1970-2015) Timo Bolt, 2015-08-28 In the early 1990s a new concept was coined evidence based medicine EBM After a remarkably short time EBM was virtually all pervasive in medicine and healthcare throughout the world Even outside the domain of healthcare the new concept became fashionable for example in the shape of pleas for evidence based management and evidence based policy In short evidence based developed into one of the mantras of the current era This book uses history as a tool to gain insight into the highly influential but also elusive and multifaceted phenomenon of EBM As such A Doctor's Order is a must read for patients professionals managers and policy makers in healthcare as well as for anyone who is interested in understanding the present socio political order

Onverklaarde Chronische Klachten J. W. J. Gulden, A. J. J. M. Vingerhoets, 2012-07 **De afloop** Jan Beckers, Nona Lumalessil, Junus Ririmasse, 2023-08-30 Op 11 juni 1977 voltrok zich de enige grootscheepse militaire aanval op Nederlands grondgebied sinds de Tweede Wereldoorlog

Om zes minuten voor vijf in de vroege ochtend openden 29 precisieschutters het vuur op een door negen Molukse jongeren gekaapte trein bij het Drentse dorpje De Punt. In acht minuten werden 15 000 kogels op eigen burgers afgevuurd. Vervolgens gingen mariniers de trein binnen en ontzetten in een paar minuten 51 gegijzelde passagiers. Dit boek geeft na bijna een halve eeuw voor het eerst een nauwkeurige reconstructie van wat er zich in die twaalf minuten rond maar vooral in de trein afspeelde en toont aan dat een aantal van de mariniers vijf van de negen Molukse actievoerders executeerden. De auteurs wisten als eersten documenten te bemachtigen die tot 2053 als staatsgeheim geclassificeerd waren. De afloop complementeert hiermee niet alleen de talloze publicaties die sinds 1977 verschenen en nooit een exact beeld wisten te schetsen maar biedt ook geheel nieuwe inzichten. In hechte samenwerking met forensisch patholoog Frank van de Goot komen de auteurs na uitvoerig onderzoek van de originele autopsierapporten tot een nauwkeurige analyse van de dodelijke schoten. Daarnaast spraken de auteurs met tientallen direct betrokkenen: gegijzelden, militairen, bemiddelaars en de toenmalig verantwoordelijk minister. Dit levert een indrukwekkend en aangrijpend beeld op van het verloop van de kaping en de onderlinge verstandhouding die tussen de gijzelnemers en gegijzelden in die drie weken en ook daarna ontstond.

Nederlandsche overheidsuitgaven Koninklijke Bibliotheek (Netherlands), 1975 Ethics by Committee Noortje Jacobs, 2022-08-26. How liberal democracies in the late twentieth century have sought to resolve public concerns over charged issues in medicine and science. Ethics boards have become obligatory passage points in today's medical science and we forget how novel they really are. The use of humans in experiments is an age-old practice that records show goes back to at least the third century BC and it has been popular as a practice since the early modern period. Yet in most countries around the world hardly any formal checks and balances existed to govern the communal oversight of experiments involving human subjects until at least the 1960s. Ethics by Committee traces the rise of ethics boards for human experimentation in the second half of the twentieth century. Using the Netherlands as a case study, historian Noortje Jacobs shows how the authority of physicians to make decisions about clinical research in this period gave way in most developed nations to formal mechanisms of communal decision making that served to regiment the behavior of individual researchers. This historically unprecedented change in scientific governance came out of the growing international wariness of medical research in the decades after World War II and was meant to solidify a new way of reasoning together in liberal democracies about medicine and science. But what reasoning together meant and who was invited to participate changed drastically over time. In detailing this history, Jacobs shows that research ethics committees were originally intended not only to make human experimentation more ethical but also to raise its epistemic quality and intensify the use of new clinical research methods. By examining complex negotiations over the appropriate governance of human subjects research, Ethics by Committee is an important contribution to our understanding of the randomized controlled trial and the history of research ethics and bioethics more generally. **Maag-, darm- en leverziekten** J.W.M.
