**Capitalism** Jan Overwijk, 2025-01-07 This book offers a conceptual interrogation of how capital navigates its cybernetic environment Taking an immanent perspective the book develops a unique synthesis between Niklas Luhmann's systems theory and the critical theory tradition Overwijk shows how neoliberal capitalism's version of rationalization depends on the organization and management of society on the basis of cybernetic principles Overwijk seeks to update earlier critiques of cybernetic capitalism that stressed the system's colonization of its environment its making the entirety of social life communicable Under today's cybernetic rationalization things are radically different Neoliberal political economy aims to incite the incalculability of the market platform capitalists venture to capitalize on the unpredictable efforts of their users and post Fordist management seeks to encourage the creativity of service workers As this book uniquely shows capital no longer aims at total communicability but instead seeks to provoke and exploit the incommunicability of its environment In this sense it offers an ecological theory of capitalism laying conceptual the groundwork for understanding the extractivist logic of the Anthropocene Cybernetic Capitalism shows how the cultural obsession with incommunicability that animates cybernetic rationalization has taken an irrationalist turn resurfacing in the mysticism of conspiracy theory and radical right politics The book offers a novel and compelling materialist interpretation of today's paradoxical connections between neoliberal rationalism and radical right irrationalism Capitalists and Conquerors Peter McLaren, 2005-04-07 *Capitalists and Conquerors* is a series of path breaking essays in the political sociology of education on topics hotly debated within the educational community In this volume Peter McLaren addresses some of the most daunting political challenges of the current times including the globalization of capitalism the United States drive towards world domination strategies tactics and models of resistance to neoliberalism and the ravages of empire building the role of the educator as a social agent and public citizen the purposes and possibilities of public schooling and the struggle for socialism As a Marxist humanist philosopher and social theorist McLaren is able to offer new philosophical premises and socialist principles for building an alternative to capitalism The passion poetry and fierce political conviction for which McLaren is known is very much present in this volume

*The Constitution of the City* Allen J. Scott, 2017-08-01 This book presents an exploratory account of the origins and dynamics of cities The author recounts how the essential foundations of the urbanization process reside in two interrelated forces These are the tendency for many different kinds of human activity to gather together to form functional complexes on the landscape and the multifaceted intra urban space sorting crosscurrents set in motion by this primary urge

From these basic points of departure the city in all its fullness emerges as a reflexive moment in social and economic development The argument of the book is pursued both in theoretical and in empirical terms devoting attention to the changing character of urbanization in the capitalist era A point of particular emphasis concerns the peculiar patterns of resurgent urbanization that are making their historical and geographical appearance in the currently emerging phase of cognitive cultural capitalism and that are now rapidly diffusing across the globe

**Artificial Intelligence in the Capitalist University** John Preston, 2021-10-31 Using Marxist critique this book explores manifestations of Artificial Intelligence AI in Higher Education and demonstrates how it contributes to the functioning and existence of the capitalist university Challenging the idea that AI is a break from previous capitalist technologies the book offers nuanced examination of the impacts of AI on the control and regulation of academic work and labour on digital learning and remote teaching and on the value of learning and knowledge Applying a Marxist perspective Preston argues that commodity fetishism surveillance and increasing productivity ushered in by the growth of AI further alienates and exploits academic labour and commodifies learning and research The text puts forward a solid theoretical framework and methodology for thinking about AI to inform critical and revolutionary pedagogies Offering an impactful and timely analysis
