Critical infrastructure protection Department of Homeland Security faces challenges in fulfilling cybersecurity responsibilities : report to congressional requesters. , Critical Infrastructure Protection in Homeland Security Ted G. Lewis, 2006-03-31 A scientific approach to the new field of critical infrastructure protection This book offers a unique scientific approach to the new field of critical infrastructure protection it uses network theory optimization theory and simulation software to analyze and understand how infrastructure sectors evolve where they are vulnerable and how they can best be protected The author demonstrates that infrastructure sectors as diverse as water power energy telecommunications and the Internet have remarkably similar structures This observation leads to a rigorous approach to vulnerability analysis in all of these sectors

The analyst can then decide the best way to allocate limited funds to minimize risk regardless of industry sector. The key question addressed in this timely book is: What should be protected and how? The author proposes that the answer lies in allocating a nation's scarce resources to the most critical components of each infrastructure, the so-called critical nodes. Using network theory as a foundation, readers learn how to identify a small handful of critical nodes and then allocate resources to reduce or eliminate risk across the entire sector. A comprehensive set of electronic media is provided on a CD-ROM in the back of the book that supports in-class and self-tutored instruction. Students can copy these professionally produced audio-video lectures onto a PC (Microsoft Windows) and Apple (Macintosh) compatible for repeated viewing at their own pace. Another unique feature of the book is the open-source software for demonstrating concepts and streamlining the math needed for vulnerability analysis. Updates, as well as a discussion forum, are available from www.CHDS.us. This book is essential for all corporate, government agency, and military professionals tasked with assessing vulnerability and developing and implementing protection systems. In addition, the book is recommended for upper-level undergraduate and graduate students studying national security computing and other disciplines where infrastructure security is an issue.

Cybersecurity for Critical Infrastructure Protection Via Reflection of Industrial Control Systems O.B. Popov, L. Sukhostat, 2022-11-23. Although cybersecurity is something of a latecomer on the computer science and engineering scene, there are now inclinations to consider cybersecurity a meta-discipline. Unlike traditional information and communication systems, the priority goal of the cybersecurity of cyber-physical systems is the provision of stable and reliable operation for the critical infrastructures of all fundamental societal functions and activities. This book, *Cybersecurity for Critical Infrastructure Protection via Reflection of Industrial Control Systems*, presents the 28 papers delivered at the NATO Advanced Research Workshop (ARW) hosted in Baku, Azerbaijan, and held online from 27-29 October 2021. The inspiration and motivation behind the ARW stem from the growth in large-scale cyber attacks, the rising degree of complexity and sophistication of advanced threats, and the need to protect critical infrastructure by promoting and building a resilient system to promote the well-being of all citizens. The workshop covered a wide range of cybersecurity topics permeating the main ideas, concepts, and paradigms behind ICS and blended with applications and practical exercises with overtones to IIoT, ICS, artificial intelligence, and machine learning. Areas discussed during the ARW included the cybersecurity of critical infrastructures, its educational and research aspects, vulnerability analysis, ICS/PLC/SCADA test beds, and research in intrusion detection, mitigation, and prevention, cryptography, digital forensics for ICS/PLCs, Industry 4.0 robustness and trustworthiness, and the Cyber Fortress concept infused with practical training. Investigating theoretical and practical problems involving the security of critical and essential infrastructure of each segment of contemporary societies, the book will be of interest to all those whose work involves cybersecurity.
