**Developing Intelligent Agent Systems** Lin Padgham, Michael Winikoff, 2005-06-24 Build your own intelligent agent system Intelligent agent technology is a tool of modern computer science that can be used to engineer complex computer programmes that behave rationally in dynamic and changing environments Applications range from small programmes that intelligently search the Web buying and selling goods via electronic commerce to autonomous space probes This powerful technology is not widely used however as developing intelligent agent software requires high levels of training and skill The authors of this book have developed and tested a methodology and tools for developing intelligent agent systems With this methodology Prometheus developers can start agent oriented designs and implementations easily from scratch saving valuable time and resources Developing Intelligent Agent Systems not only answers the questions what are agents and why are they useful but also the crucial question how do I design and build intelligent agent systems The book covers everything a practitioner needs to know to begin to effectively use this technology including an introduction to the notion of agents a description of the concepts involved and a software engineering methodology Read on for a practical step by step introduction to designing and building intelligent agent systems a full life cycle methodology for developing intelligent agent systems covering specification analysis design and implementation of agents PDT Prometheus Design Tool software support for the Prometheus design process the example of an electronic bookstore to illustrate the design process throughout the book Electronic resources including the Prometheus Design Tool PDT can be found at <http://www.cs.rmit.edu.au/agents/prometheus> This book is aimed at industrial software developers software engineers and at advanced undergraduate students It assumes knowledge of basic software engineering but does not require knowledge of Artificial Intelligence or of mathematics Familiarity with Java will help in reading the examples in chapter 10 **Agent-Oriented Software**

**Engineering VIII** Michael Luck, Lin Padgham, 2008-04-29 Software architectures that contain many dynamically interacting components each with its own thread of control engaging in complex coordination protocols are difficult to correctly and efficiently engineer Agent oriented modelling techniques are important for the design and development of such applications This book provides a diverse and interesting overview of the work that is currently being undertaken by a growing number of researchers in the area of Agent Oriented Software Engineering This volume constitutes the thoroughly refereed proceedings of the 8th International Workshop on Agent Oriented Software Engineering AOSE 2007 held in Honolulu Hawaii in May 2007 as part of AAMAS 2007 The 16 revised full papers were carefully selected from numerous submissions during two rounds of reviewing and improvement The volume contains the papers presented at the workshop together with papers resulting from discussions on tools and platforms The papers have been organized into four sections on methodology and processes interacting heterogeneous agents system development issues and tools and case studies **Agent-Oriented Information**

This proceedings volume of the 5th AOIS Workshop is an opportunity for looking back at five years of organizing AOIS workshops. What did we achieve with the AOIS workshop series? Where were we five years ago, where are we now? Did our theme impact on the information systems field in the way that we had hoped for? AOIS workshops have taken place in Seattle, Heidelberg, Stockholm, Austin, Montreal, Interlaken, Toronto, Bologna, Melbourne, and Chicago, always in conjunction with a major conference on either multiagent systems in artificial intelligence (AI/MAS) or information systems (IS). We have tried to innovate in holding these workshops as biconference events each year. AOIS held two workshop events: one at an AI/MAS conference and one at an IS conference, as well as using the AOIS web site as a medium for communication among researchers. So certainly we have reached a wide audience of researchers around the world from both the AI/MAS and IS communities. But did we also manage to build up a dedicated AOIS community? Five years ago we wrote: "Agent concepts could fundamentally alter the nature of information systems of the future and how we build them, much like structured analysis, ER modeling, and Object Orientation has precipitated fundamental changes in IS practice." Of course, a period of five years is too short for evaluating the success or failure of a new scientific paradigm. But still, we may observe that while most IS conferences meanwhile list agents as one of their many preferred topics, agent orientation is generally not considered to be a fundamental IS paradigm.

*Agent-Oriented Software Engineering VII* Lin Padgham, Franco Zambonelli, 2007-08-06. This book constitutes the thoroughly refereed post-proceedings of the 7th International Workshop on Agent Oriented Software Engineering (AOSE 2006) held in Hakodate, Japan, in May 2006, as part of AAMAS 2006.
