Measelle,2005-05-06 This volume focuses on how parent child relationships aren't the only determinants of a child's academic competence, social competence, and behavior. Rather, these relationships must be understood in the context of the role they play within the family as Mentalizing in Child Therapy Annelies Verheugt-Pleiter, Jolien Zevalkink, 2021-06-22

Mentalizing in Child Therapy focuses on open-ended psychotherapy for children with complex mental health issues and attachment problems. It offers examples of personalized and integrated treatment that is firm in structure yet flexible in its focus. Peter Fonagy foreword to first edition. The book is based on the systematic observation of the treatment of complex problems in children 4-12 years using a mentalizing therapeutic stance and a range of techniques to enhance mentalizing abilities and trust in other people, incorporating aspects of the more relationship-oriented and competence-oriented treatments. In this updated edition, the authors have elaborated on the topic of attention regulation, having included Siegel's concept of the window of tolerance. They've also written more on the mentalizing abilities of the therapist, the importance of providing structure at the beginning of the treatment, and the value of communication for developing epistemic trust. Featuring guidelines for clinical practitioners, this book is important for the clinical training of child psychotherapists as well as for professional child psychiatrists, child psychologists, and other therapists working with four to 12-year-old children experiencing significant developmental problems with mentalizing.

*Successful Prevention and Youth Development Programs* Laura Ferrer-Wreder, Håkan Stattin, Carolyn Cass Lorente, Jonathan G. Tubman, Lena Adamson, 2012-02-02 From a European Perspective. This book charts territory that is profoundly important and yet rarely fully understood. The authors have attempted a task that has relevance to the widest possible range of professionals working with children and adolescents. In describing and assessing the fields of prevention and promotion, they have performed an immense service to researchers in this field but also to practitioners across the spectrum from mental health nurses and doctors to teachers and psychologists from social work professionals to psychiatrists and youth counselors. There are two other key elements that should be emphasized from the outset. The first is that the approach in this book is truly multi-disciplinary, with the authors making a genuine attempt to draw upon knowledge and practice derived from all the relevant disciplines. The second element, which makes this book so important, is that the authors have worked across countries to ensure that work in the field of intervention from both North America and from Europe should be included. This is as welcome as it is refreshing. There appear to be so many barriers to true collaboration between the two continents and so many examples of either North American or European social scientists appearing blind to what is going on across the border that the approach taken here should be wholeheartedly commended. This book is essentially a review, but a rather special review.
