Introduction to Empirical Processes and Semiparametric Inference Michael R. Kosorok, 2007-12-29 The goal of this book is to introduce statisticians and other researchers with a background in mathematical statistics to empirical processes and semiparametric inference These powerful research techniques are surpr ingly useful for studying large sample properties of statistical estimates from realistically complex models as well as for developing new and proved approaches to

statistical inference This book is more of a textbook than a research monograph although a number of new results are presented The level of the book is more troductory than the seminal work of van der Vaart and Wellner 1996 In fact another purpose of this work is to help readers prepare for the mathematically advanced van der Vaart and Wellner text as well as for the semiparametric inference work of Bickel Klaassen Ritov and We ner 1997 These two books along with Pollard 1990 and Chapters 19 and 25 of van der Vaart 1998 formulate a very complete and successful elucidation of modern empirical process methods The present book owes much by the way of inspiration concept and notation to these previous works What is perhaps new is the gradual yetrigorous anduni ed way this book introduces the reader to the eld

subgroups and their mixtures with a principled solution that resolves these issues This chapter has implication toward meeting the ICHE9R1 Estimands requirement Besides the mere multiple testing methodology itself the handbook also covers related topics like the statistical task of model selection in Chapter 7 or the estimation of the proportion of true null hypotheses or in other words the signal prevalence in Chapter 8 It also contains decision theoretic considerations regarding the admissibility of multiple tests in Chapter 6 The issue of selected inference is addressed in Chapter 9 Comparison of responses can involve millions of voxels in medical imaging or SNPs in genome wide association studies GWAS Chapter 14 and Chapter 15 provide state of the art methods for large scale simultaneous inference in these settings
