Multiple Criteria Decision Making Applications in Environmentally Conscious Manufacturing and Product Recovery Surendra M. Gupta, Mehmet Ali Ilgin, 2017-10-17 In order to ensure environmentally responsible production and disposal of products local governments are imposing stricter environmental regulations some of which even require manufacturers to take back their products at the end of the product s useful life These government regulations together with increasing environmental awareness have forced manufacturers to invest in environment conscious manufacturing The multiple Criteria Decision Making Techniques presented in this book can be employed to solve the problems of environment conscious manufacturers in product design logistics disassembly and remanufacturing

Responsible Manufacturing Ammar Y. Alqahtani, Elif Kongar, Kishore K. Pochampally, Surendra M. Gupta, 2019-02-25 Responsible Manufacturing has become an obligation to the environment and to society itself enforced primarily by customer perspective and governmental regulations on environmental issues This is mainly driven by the escalating deterioration of the environment such as diminishing raw material resources overflowing waste sites and increasing levels of pollution Responsible Manufacturing related issues have found a large following in industry and academia which aim to find solutions to the problems that arise in this newly emerged research area Problems are widespread including the ones related to the lifecycle of products disassembly material recovery remanufacturing and pollution prevention Organized into sixteen chapters this book provides a foundation for academicians and practitioners and addresses several important issues faced by strategic tactical and operation planners of Responsible Manufacturing Using efficient models in a variety of decision making situations it provides easy to use mathematical and or simulation modeling based solution methodologies for the majority of the issues Features Addresses a variety of state of the art issues in Responsible Manufacturing Highlights how popular industrial engineering and operations research techniques can be effectively exploited to find the most effective solutions to problems Presents how a specific issue can be approached or modeled in a given decision making situation Covers strategic tactical and operational systems issues Provides a foundation for academicians and practitioners interested in building bodies of knowledge in this new and fast growing area

Remanufacturing Modeling and Analysis Mehmet Ali Ilgin, Surendra M. Gupta, 2016-04-19 New Now Next Consumers ever growing appetite to acquire new products and their short courtship with them has kept manufacturers busy not only expending resources at an alarming rate but also depleting these resources and giving rise to waste and pollution at a correspondingly increasing and disturbing rate

Alqahtani,Surendra M. Gupta,2018-12-12 The exponential increase in the development of technology coupled with the customers immense desire to possess the newest technological products makes for truncated product lifespans which instigates a substantial upsurge in their rate of disposal Attempts have been made to establish specialized product recovery facilities with the intention of diminishing the volume of accumulated waste delivered to landfills using product recovery procedure such as remanufacturing The economic benefits produced by remanufacturing also portray the role of product recovery in a more attractive light The quality of a remanufactured product is uncertain for some consumers Therefore these consumers possess insecurities in deciding whether or not the remanufactured products will render the same expected performance This ambiguity regarding a remanufactured product could possibly result in the consumer deciding against its purchase With such consumer apprehension remanufacturers often seek market mechanisms that provide reassurance as to the stable durability that these products still maintain One strategy that the remanufacturers often use is the utilization of the premise of offering product warranties with preventive maintenance on their products This book is concerned with the practice and theory of warranty management and preventive maintenance particularly in relation to remanufactured products warranties Models developed in this book can be used for making the right decisions in offering renewable nonrenewable one and two dimensional warranty policies and for managerial decision in considering maintenance contracts or outsourcing maintenance for remanufactured components and products Features Discusses a variety of warranty policies and preventive maintenance of remanufactured products first book to do so Presents mathematical models and applications for warranty policies using examples and simulation results Considers cost and optimization problems from the remanufacturer s and buyer s points of views Provides a foundation for academicians interested in building models in the area of warranty and preventive maintenance analysis of remanufactured products Offers the essential methodology needed by practitioners involved with warranty and preventive maintenance analysis along with extensive references for further research *Web-Based Green Products Life Cycle Management Systems: Reverse Supply Chain Utilization* Wang,

Metaheuristics for Scheduling in Industrial and Manufacturing Applications Fatos Xhafa,Ajith Abraham,2008-06-21 During the past decades scheduling has been among the most studied op mization problemsanditisstillanactiveareaofresearch Schedulingappears in many areas of science engineering and industry and takes di erent forms depending on the restrictions and optimization criteria of the operating en ronments 8 For instance in

optimization and computer science scheduling has been defined as the allocation of tasks to resources over time in order to achieve optimality in one or more objective criteria in an efficient way and in production as production schedule i.e. the planning of the production or the sequence of operations according to which jobs pass through machines and is optimal with respect to certain optimization criteria. Although there is a standardized form of stating any scheduling problem namely efficient allocation of jobs on machines which can process no more than one activity at a time with the objective to optimize some objective function of the job completion times scheduling is in fact a family of problems. Indeed several parameters intervene in the problem definition: a job characteristics preemptive or not precedence constraints release dates etc b resource environment single vs parallel machines unrelated machines identical or uniform machines etc c optimization criteria minimize total tardiness the number of late jobs makespan overtime etc maximize resource utilization etc and d scheduling environment static vs dynamic in the former the number of jobs to be considered and their ready times are available while in the latter the number of jobs and their characteristics change over time.

Handbook of Environmentally Conscious Manufacturing Christian N. Madu, 2012-12-06 Manufacturers are increasingly under pressure from their major stakeholders to integrate environmental issues in the design and management of their products. These stakeholders include customer regulators employees communities and interest groups who have a common stake in protecting the earth from pollution and in limiting the exploitation of earth's limited natural resources. Manufacturers recognize that being environmentally responsible also offers competitive advantage to the firm. Hence the *Handbook of Environmentally Conscious Manufacturing* is written as a state of the art reference to environmentally conscious manufacturing (ECM). The chapter authors were carefully selected. All the chapter authors have done extensive research and/or practice work in the field of ECM. The *Handbook* covers all the major topics in Environmentally Conscious Manufacturing. There are specific chapters to deal with sustainable manufacturing recycling eco labelling life cycle assessment and ISO 14000 series of standards as well as decision making aspects of Environmentally Conscious Manufacturing. Decision oriented topics on supply chain decision models quality initiative environmental costing and decision support systems are also covered. The influence of ECM on marketing imperative is also covered. The *Handbook* is the most comprehensive treatment of Environmentally Conscious Manufacturing available to date. It is the definitive state of the art reference to ECM and its applications to today's manufacturing firms.

Frontiers of Assembly and Manufacturing Sukhan Lee, Raúl Suárez, Byung Wook Choi, 2010-09-21 The technologies for product assembly and manufacturing evolve along with the advancement of enabling technologies such as material science robotics machine intelligence as well as information and communication. Furthermore they may be subject to fundamental changes due to the shift in key product features and/or engineering requirements. The enabling technologies emerging offer new opportunities for moving up the level of automation optimization and reliability in product assembly and manufacturing beyond what have been possible. We see assembly and manufacturing becoming more intelligent with the perception driven

robotic autonomy more flexible with the human robot coupled collaboration in work cells and more integrated in scale and complexity under the distributed and networked frameworks. On the other hand, the shift in key product features and engineering requirements dictates the new technologies and tools for assembly and manufacturing to be developed. This may be exemplified by a high complexity of micro nano system products integrated and packaged in 3D with various heterogeneous parts, components and interconnections including electrical, optical, mechanical as well as fluidic means.

CIRP Design 2012
Amaresh Chakrabarti, 2012-11-27 During its life cycle, a product produces waste that is over 20 times its weight. As such, it is critical to develop products that are sustainable. Currently, product development processes lack high quality methods and tools that are empirically validated to support development of sustainable products. This book is a compilation of over forty cutting edge international research papers from the 22nd CIRP International Design Conference written by eminent researchers from 15 countries on engineering design process methods and tools broadly for supporting sustainable product development. A variety of new insights into the product development process as well as a host of methods and tools that are at the cutting edge of design research are discussed and explained covering a range of diverse topics. The areas covered include Sustainable design and manufacturing, Design synthesis and creativity, Global product development and product life cycle management, Design for X, safety, reliability, manufacturability etc. and Design taxonomy, ontology and standards. CIRP Design 2012 Sustainable Product Development provides researchers in design engineering and sustainability access to some of the latest quality research in this area. Practitioners and educators of engineering design and sustainability will find an empirically validated suite of methods and tools that can be applied and taught to develop their practices.

Quality Management in Reverse Logistics
Yiannis Nikolaidis, 2012-10-08 Quality Management in Reverse Logistics intends to develop, collect, examine and evaluate a number of quality management (QM) tools and techniques which can be applied in practice in order to understand, review and improve any closed loop supply chain process. In other words, the book aims to examine the existing relationship between various well developed and thoroughly studied quality issues such as QM, quality assurance, standardization of processes and statistical quality control and the emerging research area of reverse logistics. Quality Management in Reverse Logistics contains modeling and quantitative methods that could be used by practitioners and academics in the reverse logistics industry as well as a thorough description of QM tools and techniques. The book leads the potential reader to broaden their scope of thinking and acting in the new promising area of reverse logistics where QM can be applied.

Re-engineering Manufacturing for Sustainability
