Episodes In The Mathematics Of Medieval Islam:

Episodes in the Mathematics of Medieval Islam J.L. Berggren, 2003-12-04 From the reviews The book is in spite of the author's more modest claims an introductory survey of main developments in those disciplines which were particularly important in Medieval Islamic mathematics No knowledge of mathematics or of the history of mathematics beyond normal high school level is presupposed and everything required beyond that be it Apollonian theory of conics or the definitions of celestial circles is explained carefully and clearly Scattered throughout the work are a number of lucid remarks on the character of Islamic mathematics or of mathematical work in general The book will hence not only be an excellent textbook for the teaching of the history of mathematics but also for the liberal art aspect of mathematics teaching in general Jens H yrup Mathematical Reviews as a textbook this work is highly commendable It is definitely the product of a skillful mathematician who has collected over the years a reasonably large number of interesting problems from medieval Arabic mathematics None of them is pursued to exhaustion but all of them arranged in such a way together with accompanying exercises so that they would engage an active mind and introduce a subject which I am sure the author agrees with me is at this stage very difficult to introduce G Saliba Zentralblatt

Great Muslim Mathematicians Mohaini Mohamed, 2000 This book presents detailed accounts and analysis of the lives and world view of selected mathematicians of the Islamic period their place in the world of science the popularization of their lives and their contributions specifically in mathematics and astronomy

The Mathematics of Juggling Burkard Polster, 2006-05-26 As a juggler the author likes to finish his performances with a stunt that combines props and techniques from a variety of juggling disciplines Imagine him idling on a giraffe unicycle while

balancing a spinning basketball on a mouth stick and toss juggling a sword a toilet plunger and a rubber chicken As a mathematician he is also interested in the treasure trove of beautiful mathematics used to model the different activities in a juggler s repertoire In this book he provides an intellectually stimulating collection of mostly self contained mathematical essays that introduce the reader to many elegant results and techniques from a wide range of mathematical disciplines such as combinatorics graph theory knot theory mechanics differential equations control theory and robotics *The Mathematics of Juggling* is the first comprehensive account summarizing and expanding the results in the literature on juggling tricks and skills as well as the mathematics behind these tricks and skills Anybody who is not put off by the word mathematics in the title of this book should have a good time reading it *The Rise of Early Modern Science* Toby E. Huff,2017-06-06 Now in its third edition *The Rise of Early Modern Science* argues that to understand why modern science arose in the West it is essential to study not only the technical aspects of scientific thought but also the religious legal and institutional arrangements that either opened the doors for enquiry or restricted scientific investigations Toby E Huff explores how the newly invented universities of the twelfth and thirteenth centuries and the European legal revolution created a neutral space that gave birth to the scientific revolution Including expanded comparative analysis of the European Islamic and Chinese legal systems Huff now responds to the debates of the last decade to explain why the Western world was set apart from other civilisations *A History of Mathematics* Luke Hodgkin,2013-02-21 *A History of Mathematics* From Mesopotamia to Modernity covers the evolution of mathematics through time and across the major Eastern and Western civilizations It begins in Babylon then describes the trials and tribulations of the Greek mathematicians The important and often neglected influence of both Chinese and Islamic mathematics is covered in detail placing the description of early Western mathematics in a global context The book concludes with modern mathematics covering recent developments such as the advent of the computer chaos theory topology mathematical physics and the solution of Fermat s Last Theorem Containing more than 100 illustrations and figures this text aimed at advanced undergraduates and postgraduates addresses the methods and challenges associated with studying the history of mathematics The reader is introduced to the leading figures in the history of mathematics including Archimedes Ptolemy Qin Jiushao al Kashi al Khwarizmi Galileo Newton Leibniz Helmholtz Hilbert Alan Turing and Andrew Wiles and their fields An extensive bibliography with cross references to key texts will provide invaluable resource to students and exercises with solutions will stretch the more advanced reader **Faces of Geometry. From Agnesi to Mirzakhani** Paola Magnaghi-Delfino,Giampiero Mele,Tullia Norando,2019-10-08 The volume reports on interdisciplinary discussions and interactions between theoretical research and practical studies on geometric structures and their applications in architecture the arts design education engineering and mathematics These related fields of research can enrich each other and renew their mutual interest in these topics through networks of shared inspiration and can ultimately enhance the quality of geometry and graphics education Particular attention is dedicated to the contributions that women

have made to the scientific community and especially mathematics The book introduces engineers architects and designers interested in computer applications graphics and geometry to the latest advances in the field with a particular focus on science the arts and mathematics education Math through the Ages: A Gentle History for Teachers and Others Expanded Second Edition William P. Hammoudi, 2019-05-23 Jamshīd al-Kāshī's Miftāḥ al-Hisab Key to Arithmetic was largely unknown to researchers until the mid 20th century and has not been translated to English until now This book begins a multi volume set that finally brings al-Kāshī's groundbreaking textbook to English audiences in its entirety As soon as it was studied by modern researchers it changed some false assumptions about the history of certain topics in mathematics Written as a textbook for students of mathematics accounting engineering and architecture Miftāḥ covers a wide range of topics in arithmetic geometry and algebra By sharing al-Kāshī's most comprehensive work with a wider audience this book will help establish a more complete history of mathematics and extend al-Kāshī's influence into the 21st century and beyond The book opens by briefly recounting al-Kāshī's biography so as to situate readers in the work's rich historical context His impressive status in the kingdom of Ulugh Beg is detailed as well as his contributions to both mathematics and astronomy As a master calculator and astronomer al-Kāshī's calculations of 2^n and $\sin 10^\circ$ were by far the most accurate for almost two centuries His law of cosines is still studied in schools today The authenticity of this translation contributes to the understanding and appreciation of al-Kāshī's esteemed place in the scientific world A side by side presentation of the source manuscript one of the oldest known copies and the English translation is provided on each page Detailed footnotes are also provided throughout which will offer readers an even deeper look at the text's mathematical and historical basis Researchers and students of the history of mathematics will find this volume indispensable in filling in a frequently overlooked time period and region This volume will also provide anybody interested in the history of Islamic culture with an insightful look at one of the mathematical world's most neglected figures

The House of Wisdom Jonathan Lyons, 2011-02-05 For centuries following the fall of Rome western Europe was a benighted backwater a world of subsistence farming minimal literacy and violent conflict Meanwhile Arab culture was thriving dazzling those Europeans fortunate enough to catch even a glimpse of the scientific advances coming from Baghdad Antioch or the cities of Persia Central Asia and Muslim Spain There philosophers mathematicians and astronomers were steadily advancing the frontiers of knowledge and revitalizing the works of Plato and Aristotle In the royal library of Baghdad known as the House of Wisdom an army of scholars worked at the behest of the Abbasid caliphs At a time when the best book collections in Europe held several dozen volumes the House of Wisdom boasted as many as four hundred thousand Even while their countrymen waged bloody Crusades against Muslims a handful of intrepid Christian scholars thirsty for knowledge traveled to Arab lands and returned with priceless jewels of science medicine and philosophy that laid the foundation for the Renaissance In this brilliant evocative book Lyons shows just how much Western culture owes to the glories of medieval Arab civilization and reveals the untold story of how Europe drank from the well of Muslim learning

The Britannica Guide to Geometry Britannica Educational Publishing, 2010-04-01 More than a study of shapes and angles geometry reflects an amalgamation of discoveries over time This book not only provides readers with a comprehensive understanding of geometric shapes axioms and formulas it presents the field's brilliant minds from Euclid to Wendelin Werner and many in between whose works reflect a progression of mathematical thought throughout the centuries and have helped produce the various branches of geometry as they are known today Detailed diagrams illustrate various concepts and help make geometry accessible to all

A Brief History of Numbers Leo Corry, 2015-08-27 The world around us is saturated with numbers They are a fundamental pillar of our modern society and accepted and used with hardly a second thought But how did this state of affairs come to be In this book Leo Corry tells the story behind the idea of number from the early days of the Pythagoreans up until the turn of the twentieth century He presents an overview of how numbers were handled and conceived in classical Greek mathematics in the mathematics of Islam in European mathematics of the middle ages and the Renaissance during the scientific revolution all the way through to the mathematics of the 18th to the early 20th century Focusing on both foundational debates and practical use numbers and showing how the story of numbers is intimately linked to that of the idea of equation this book provides a valuable insight to numbers for undergraduate students teachers engineers professional mathematicians and anyone with an interest in the history of mathematics

[Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures](#) Helaine Selin, 2013-11-11 The Encyclopaedia fills a gap in both the history of science and in cultural studies Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a translator of Greek scientific works The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures science Our aim is not to claim

the superiority of other cultures but to engage in a mutual exchange of ideas The Western academic divisions of science technology and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected This work contributes to redressing the balance in the number of reference works devoted to the study of Western science and encourages awareness of cultural diversity The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does xi PERSONAL NOTE FROM THE EDITOR Many years ago I taught African history at a secondary school in Central Africa

Science and Islam Muzaffar Iqbal, 2007-03-30 Science and Islam provides a detailed account of the relationship between Islam and science from the emergence of the Islamic scientific tradition in the eighth century to the present time This relationship has gone through three distinct phases The first phase began with the emergence of science in the Islamic civilization in the eighth century and ended with the rise of modern science in the West the second period is characterized by the arrival of modern science in the Muslim world most of which at that time was under colonial occupation and the third period which began around 1950 is characterized by a more mature approach to the major questions that modern science has posed for all religious traditions Based on primary sources the book presents a panorama of Islamic views on some of the major issues in the current science and religion discourse Written in accessible language Science and Islam is an authentic account of the multi faceted and complex issues that arise at the interface of Islamic intellectual tradition and science Rich in historical details the book is a fascinating survey of the interaction of Islamic beliefs with the enterprise of science

Katz, Karen Hunger Parshall, 2020-04-07 What is algebra For some it is an abstract language of x s and y s For mathematics majors and professional mathematicians it is a world of axiomatically defined constructs like groups rings and fields Taming the Unknown considers how these two seemingly different types of algebra evolved and how they relate Victor Katz and Karen Parshall explore the history of algebra from its roots in the ancient civilizations of Egypt Mesopotamia Greece China and India through its development in the medieval Islamic world and medieval and early modern Europe to its

modern form in the early twentieth century Defining algebra originally as a collection of techniques for determining unknowns the authors trace the development of these techniques from geometric beginnings in ancient Egypt and Mesopotamia and classical Greece They show how similar problems were tackled in Alexandrian Greece in China and in India then look at how medieval Islamic scholars shifted to an algorithmic stage which was further developed by medieval and early modern European mathematicians With the introduction of a flexible and operative symbolism in the sixteenth and seventeenth centuries algebra entered into a dynamic period characterized by the analytic geometry that could evaluate curves represented by equations in two variables thereby solving problems in the physics of motion This new symbolism freed mathematicians to study equations of degrees higher than two and three ultimately leading to the present abstract era Taming the Unknown follows algebra's remarkable growth through different epochs around the globe

Islamic Astronomy

and Geography David A. King, 2022-02-13 This volume of 12 studies mainly published during the past 15 years begins with an overview of the Islamic astronomy covering not only sophisticated mathematical astronomy and instrumentation but also simple folk astronomy and the ways in which astronomy was used in the service of religion It continues with discussions of the importance of Islamic instruments and scientific manuscript illustrations Three studies deal with the regional schools that developed in Islamic astronomy in this case Egypt and the Maghrib Another focuses on a curious astrological table for calculating the length of life of any individual The notion of the world centred on the sacred Kaaba in Mecca inspired both astronomers and proponents of folk astronomy to propose methods for finding the qibla or sacred direction towards the Kaaba their activities are surveyed here The interaction between the mathematical and folk traditions in astronomy is then illustrated by an 11th century text on the qibla in Transoxania The last three studies deal with an account of the geodetic measurements sponsored by the Caliph al Ma'mun in the 9th century a world map in the tradition of the 11th century polymath al-Biruni alas corrupted by careless copying and a table of geographical coordinates from 15th century Egypt
