multilateral treaties e.g. the Chicago Convention of 1944 for Public International Air Law. This is supplemented by various Annexes promulgated by the International Civil Aviation Organization and Conventions and Protocols promulgated by States in diplomatic conferences. States then implement these international obligations in domestic laws that create aviation regulatory administrations that in turn promulgate regulations. Bringing together leading scholars in the field, this prestigious reference work provides a comprehensive and comparative overview of Public Aviation Law. It surveys the state of the discipline including contemporary and emerging areas of law, regulation and public policy in air transportation. Each chapter begins with an overview of the international law applicable to the subject matter followed, where appropriate, by a comparative examination of domestic statutes, regulations and jurisprudence. The objective of the book is to identify and summarize existing areas within the context of international research and to identify and highlight emerging areas. Both practical and theoretical in scope, the Routledge Handbook of Public Aviation Law will be of great relevance to scholars, researchers, lawyers and policy makers with an interest in aviation law.

Sustainable Development, International Aviation, and Treaty Implementation Armand L.C. de Mestral, P. Paul Fitzgerald, Md. Tanveer Ahmad, 2018-09-06. In 1944 the Chicago Convention set out the foundations of public international law regulating international air transport, but until 2016 no international agreement existed to limit its environmental impact. Sustainable Development, International Aviation and Treaty Implementation explains why the CORSIA scheme adopted by the International Civil Aviation Organization in 2016 should be implemented in 2020, even though the adequacy of this scheme is still open to doubt and criticism. This book seeks to examine the many dimensions of the effort to contain greenhouse gas emissions from aircraft in a manner consonant with the principles of sustainable development and examines the development of international law and policy in an area that has remained largely outside the general framework of international environmental law. International civil aviation is a significant polluter of the atmosphere and in this volume a group of air law and sustainable development law specialists considers how the international community can respond.

The Elgar Companion to the Law and Practice of the International Civil Aviation Organization Ludwig Weber, Joseph Wilson, 2025-06-09. This comprehensive Companion presents a unique overview of the law and practice of the International Civil Aviation Organization (ICAO). It explores the organization's indispensable role in the formulation and implementation of rules, policies, standards and recommended practices across the 193 member States, addressing major challenges such as fostering aviation safety and security, reducing emissions, upgrading air navigation services and protecting the flying public against cyber threats.
