Top, 2022-07-28 Targeted cancer therapies, from small molecules to antibodies, volume II Zhe-Sheng Chen, Yunkai Zhang, Jian-ye Zhang, Yan-yan Yan, 2023-07-27 The Evolving Chromatin and Transcriptional Landscapes - Emerging Methods, Tools and Techniques Jean-Philippe Lambert, Steve Bilodeau, Christoph Franz Kurat, 2022-01-03 Advances toward improved understanding and treatment of uncommon ovarian cancer types and subtypes Robb Hollis, Mihaela Carmen Cristea, Mignon Van Gent, 2024-10-22 Ovarian cancer is an umbrella term for a collection of distinct disease entities histotypes Until now the majority of research has focussed on the most common histotype high grade serous ovarian carcinoma HGSOC which accounts for 70% of cases The less common histotypes including endometrioid clear cell mucinous low grade serous carcinosarcoma and non epithelial histotypes have received far less research attention Accordingly while major advances in our understanding of HGSOC have led to molecularly directed therapies that improve patient outcomes progress in less common histotypes has lagged behind Notably many of the uncommon histotypes demonstrate resistance to conventional chemotherapy regimens and their inherent biological differences suggest most are unlikely to respond to emerging molecular therapeutics designed to target the biology of common ovarian cancer types Metal homeostasis in microbial physiology and virulence José F. da Silva Neto, Mauricio H. Pontes, Charley Staats, 2024-01-09 **Metabolic Barriers in Cancer and Cancer Therapy** Martin Böttcher, Sascha Kahlfuss "Jérôme Paggetti, 2024-05-31 Cancer immunometabolism is an emerging field exploring cellular bioenergetic alterations in both tumor and immune cells and their impact on tumor immune surveillance and therapy resistance Multiple concepts have emerged including metabolic competition over nutrients and the secretion of toxic metabolic byproducts by cancer cells Moreover cancer cells are capable of utilizing and shaping their surrounding microenvironment to their favor e g by reprogramming stroma cells to produce essential nutrients or by providing

metabolically relevant signaling molecules to foster the accumulation of immunosuppressive cells Most importantly this crosstalk within the tumor microenvironment is mostly multi directional and a better understanding of the complex interactions may pave the way to improved and or novel therapeutic strategies to overcome those obstacles for Public Health and Public Policy James Wilson, 2021-09-09 Public health has never been more important or more controversial What states do and fail to do makes a significant difference to the lives we are able to lead Putting public health first would allow improvements to the health of everyone especially the worst off Yet many citizens actively oppose state interference to improve population health complaining that it encroaches on personal liberty How should policymakers reconcile these conflicting priorities This groundbreaking book argues that philosophy is not just useful but vital for thinking coherently about priorities in health policy and public policy Novel theoretically rigorous yet practical Philosophy for Public Health and Public Policy examines why it is so common for public policies to fail in practice to improve the problems they aim to solve and what to do about this It argues that a shift to complex systems approaches to policymaking is overdue Philosophers need to become much more attuned to the contingency and messiness of real world policymaking and to the ways in which philosophical tools such as thought experiments are frequently unreliable. This book also provides an ethical framework for public health policy It argues that public health is a right of citizens alongside more familiar rights such as liberty and security Public health should not be thought of merely as interference with the rights that individuals have but as necessary to protect these rights Chapters explore implications for resource allocation personal responsibility health equity and the control of communicable disease New approaches for central nervous system rehabilitation Pawel Kiper, Agnieszka Guzik, Maurizio Petrarca, Angel Oliva-Pascual-Vaca, Carlos Lugue-Moreno, 2024-02-09 Neurorehabilitation is a complex and growing field of motor rehabilitation It is specifically directed to apply restorative techniques to stimulate neural plasticity of the central nervous system CNS Considering that neuroplasticity is maintained for the whole human life and can be stimulated through specific learning or exposure to enriched environments we can hypothesize that applying specific treatments can be beneficial for people with CNS injury Because the plateau of neuroplasticity can be observed after about 12 weeks from stroke onset it is vital to capitalize on this high level of brain reorganization by providing well timed and well designed treatments. Here we can distinguish a wide range of approaches developed for CNS recovery in acute subacute or chronic stage of injury These approaches comprise priming or augmentation techniques including innovative technologies like end effector robots exoskeletons or virtual reality Many of them have been confirmed as effective but so far in clinical practice we can still experience a lack of specific indications i e which therapy for how long time and for which patient s impairment can be applied Role of p53 in cell metabolism, ferroptosis, and stemness Yanqing Liu, Jing Zhang, Shufang Cui, Yanchun Zhang, 2023-05-08 The New Republic Herbert David Croly, 1985 **New Technologies for Women's Health** Lana McClements, Vesna Garovic, Dunja Aksentijevic, 2022-08-08 The Advocate, 2004-09-14 The Advocate is a
