Scarfe, 2013-02-01 It has been said that new discoveries and developments in the human social and natural sciences hang in the air Bowler 1983 2008 prior to their consummation While neo Darwinist biology has been powerfully served by its mechanistic metaphysic and a reductionist methodology in which living organisms are considered machines many of the chapters in this volume place this paradigm into question Pairing scientists and philosophers together this volume explores what might be termed the New Frontiers of biology namely contemporary areas of research that appear to call an updating a supplementation or a relaxation of some of the main tenets of the Modern Synthesis Such areas of investigation include Emergence Theory Systems Biology Biosemiotics Homeostasis Symbiogenesis Niche Construction the Theory of Organic Selection also known as the Baldwin Effect Self Organization and Teleodynamics as well as Epigenetics Most of the chapters in this book offer critical reflections on the neo Darwinist outlook and work to promote a novel synthesis that is open to a greater degree of inclusivity as well as to a more holistic orientation in the biological sciences **The Palgrave Handbook of Biology and Society** Maurizio Meloni, John Cromby, Des Fitzgerald, Stephanie Lloyd, 2017-10-27 This comprehensive

handbook synthesizes the often fractured relationship between the study of biology and the study of society. Bringing together a compelling array of interdisciplinary contributions, the authors demonstrate how nuanced attention to both the biological and social sciences opens up novel perspectives upon some of the most significant sociological, anthropological, philosophical, and biological questions of our era. The six sections cover topics ranging from genomics and epigenetics to neuroscience and psychology to social epidemiology and medicine. The authors collaboratively present state-of-the-art research and perspectives in some of the most intriguing areas of what can be called biosocial and biocultural approaches, demonstrating how quickly we are moving beyond the acrimonious debates that characterized the border between biology and society for most of the twentieth century. This landmark volume will be an extremely valuable resource for scholars and practitioners in all areas of the social and biological sciences.

Romanticism, Origins, and the History of Heredity Christine Lehleiter, 2014-10-30. At the turn of the eighteenth century, selfhood was understood as a *tabula rasa* to be imprinted in the course of an individual's life. By the middle of the nineteenth century, however, the individual had become defined as determined by heredity already from birth. Examining novels by Goethe, Jean Paul, and E. T. A. Hoffmann, studies on plant hybridization, treatises on animal breeding, and anatomical collections, *Romanticism, Origins, and the History of Heredity* delineates how romantic authors imagined the ramifications of emerging notions of heredity for the conceptualization of selfhood. Focusing on three fields of inquiry: inbreeding and incest, cross breeding and bastardization, evolution and autopoiesis, Christine Lehleiter proposes that the notion of selfhood for which Romanticism has become known was not threatened by considerations of determinism and evolution but was in fact already a result of these very considerations. *Romanticism, Origins, and the History of Heredity* will be of interest for literary scholars, historians of science, and all readers fascinated by the long duration of subjectivity and evolutionary thought.

The Restless Clock Jessica Riskin, 2016-03-10. A wide-ranging, witty, and astonishingly learned scientific and cultural history of the concept of the capacity to act in nature. *London Review of Books*. Today, a scientific explanation is not meant to ascribe agency to natural phenomena; we would not say a rock falls because it seeks the center of the earth. Even for living things in the natural sciences, and often in the social sciences, the same is true. A modern botanist would not say that plants pursue sunlight. This has not always been the case, nor perhaps was it inevitable. Since the seventeenth century, many thinkers have made agency in various forms central to science. *The Restless Clock* examines the history of this principle banning agency in the life sciences. It also tells the story of dissenters embracing the opposite idea.

that agency is essential to nature The story begins with the automata of early modern Europe as models for the new science of living things and traces questions of science and agency through Descartes Leibniz Lamarck and Darwin among many others Mechanist science Jessica Riskin shows had an associated theology the argument from design which found evidence for a designer in the mechanisms of nature Rejecting such appeals to a supernatural God the dissenters sought to naturalize agency rather than outsourcing it to a divine engineer Their model cast living things not as passive but as active self making machines The conflict between passive and active mechanist approaches maintains a subterranean life in current science shaping debates in fields such as evolutionary biology cognitive science and artificial intelligence This history promises not only to inform such debates but also our sense of the possibilities for what it means to engage in science and even what it means to be alive Praise for *The Restless Clock* A wonderful contribution and much needed corrective to the history of European ideas about life and matter Evelyn Fox Keller author of *The Mirage of a Space between Nature and Nurture* Engrossing and illuminating *Nature* A sweeping survey of the search for answers to the mystery of life Riskin writes with clarity and wit and the breadth of her scholarship is breathtaking Times Higher Education UK

Our Exodus Story Robert P. Vande Kappelle, 2023-07-06 Every person has an exodus story a vast complex multilayered spiritual journey On the one hand it is a biological journey from birth to death and a social journey from infancy to adulthood In this regard it is a story of growing up of leaving home and taking risks of making mistakes and learning from them of reaching goals and surpassing them *Our Exodus Story* speaks of human life as a gossamer bridge that binds us as people with God others and with our inner being This journey of faith is described as a holy balancing act between the three sources of authority for people of faith experience Scripture and tradition Bonded umbilically to one another and to God each of us bears exodus like and cross like experiences Personality and spirituality are deeply interrelated so much that neither function adequately apart from the other Though not identical they strive to be in sync balancing one another in profound and intimate ways Personality takes the lead and where personality goes spirituality follows though not blindly or passively Spirituality has its own voice and when its desires are addressed and heeded personality thrives This book is unique in that each of its four protagonists exhibits distinct dominant personality characteristics their experiences bearing archetypal relevance and universal appeal Their stories individual and combined are epic the protagonists and families as complex as their biblical patriarchal and matriarchal counterparts yet as current as today's top stories As you read you are invited on your own inner journey to peace wholeness and well being

Theoretical Sociology Seth Abrutyn, Kevin McCaffree, 2021-03-30 Since Durkheim's influential work a century ago sociological theory has been among the most integrative and useful tools for social scientists across many disciplines Sociological theory has nevertheless due to its usefulness expanded so very broadly that some wonder whether the concept of general theory or even the attempt to link middle range theories is still of any use This book a collection of top theorists reflecting on the present and future of the craft addresses this most important question Taking

their lead from Jonathan Turner's important recent work and drawing on their own broad experience Seth Abrutyn and Kevin McCaffree have organized the chapters in this book from the general integrative and review focused bookend chapters to more specific chapters on innovations in theory construction at the micro meso and macro levels Moreover the book's microsociological content on interpersonal violence solidarity identity and emotion coheres with chapters in mesosociological dynamics on class education and networks which in turn integrate with the chapters on inequality justice morality and cultural evolution found in the section on macrosociology The distinguished contributors share a distinct commitment to the development innovation and relevance of general sociological theory This volume is an invaluable sourcebook for advanced students and social science faculty interested in understanding how sociological theory's past and present are informing its future

Understanding Health Determinants Ian McDowell, 2023-05-30 This book assembles a wide range of explanatory perspectives on social inequalities in health Everywhere in the world those with less advantage die younger and suffer more illness than the wealthy Decades of research have documented this reality and yet we lack a comprehensive understanding of the mechanisms through which social circumstances ultimately influence the biological processes that lead to disease Explanations have been proposed from various disciplines economics psychology behavioral science geography and neuroscience and each sheds light on parts of the overall process But very few texts assemble these insights into an overall explanatory paradigm Through a review of concepts and theories from a wide range of disciplines the author outlines how

these may be woven together to offer a more complete picture of how social influences get under the skin to affect health and disease As well as understanding individual health the book assembles explanations for social disparities in health It concludes with a proposal for a set of explanatory models that cross disciplinary boundaries Topics explored include Social Inequalities in Health Explanation and Causal Models for Social Epidemiology Social and Economic Theories to Explain Patterns of Disease Biological Pathways Linking Social Determinants to Health Theoretical Models of Health Behavior Work Environment and Health Social Networks Social Support and Health Positive Influences on Health Coping and Control The Relationship Between Personality and Health Understanding Health Determinants Explanatory Theories for Social Epidemiology is a textbook for graduate students in epidemiology health sciences health policy and psychology as well as social science students who are studying health It will also be of interest to general readers and can serve as a reference for researchers in epidemiology and the health sciences who are planning studies of the social determinants of health The book reviews theories that could be tested in such studies

The Act in Context Steven C. Hayes, 2015-10-16 The Canonical Papers of Steven C Hayes is a compilation of his most pivotal articles written from 1982 2012 Through these selected papers Hayes again revisits the theoretical struggles between behavioral and cognitive behavior theories taking us from the 1980s into present day discussing the breakthroughs and follies Using this as a focus point he discusses the tradition of behavior analysis and its difficulties in addressing human language and cognition Moving forward into the 90s he chronicles the changes in a behavioral approach that emerge from a contextual perspective on human cognition and lays out the foundation for a contextual behavioral science approach that he argues is more likely to lead to an understanding of human action and an alleviation of human suffering Although the articles have previously been published they have been edited and compiled ensure this branch of research is clear to the modern audience The compilation was chosen by Dr Hayes to enhance his vision for a functional contextual approach to complex human behavior

Evolution and Crime Jason Roach, Ken Pease, 2013-04-11 Human physique and behaviour has been shaped by the pressures of natural selection This is received wisdom in all scientifically informed circles Currently the topic of crime is rarely touched upon in textbooks on evolution and the topic of evolution rarely even mentioned in criminology textbooks This book for the first time explores how an evolution informed criminology has clear implications for enhancing our understanding of the criminal law crime and criminal behaviour This book is directed more towards students of criminology than students of evolution It is suggested that there is scope for more collaborative work with criminologists and crime scientists exposed to Darwinian thought having much to gain What is suggested is simply that such thinking provides a fresh perspective If that perspective yields only a fraction of the understanding when applied to crime as it has elsewhere in

science the effort will have been worthwhile The authors attempt to provide a modest appraisal of the potential contribution that a more welcoming approach to the evolutionary perspective would make to criminology both theoretically by expanding understanding of the complexity of the origins of behaviour labelled criminal and practically where the evolutionary approach can be utilised to inform crime control policy and practice An evolutionary lens is applied to diverse criminological topics such as the origins of criminal law female crime violence and environmental factors involved in crime causation

Periagoge - Theory of Singularity and Philosophy as an Exercise of Transformation Guido Cusinato, 2023-11-07 This book returns to the question at the center of our existence a question that the narcissistic culture in which we are immersed systematically tends to remove Why The underlying thesis is that the answer must not be sought in success or social recognition but in a fragment of truth hidden somewhere inside each of us which reveals itself only if we detach ourselves from our ego and its certainties It is not therefore a matter of finding yet another philosophical theory of the meaning of existence but rather of shedding light on the conditions under which such meaning can emerge The author shows us that the ultimate source of our existential orientation lies in the affective sphere and that the current crisis of orientation is derived from the atrophy of the process of affective maturation on a large scale and from a lack of knowledge and experience about which techniques are best to reactivate it We are like glowworms that had once unlearned how to illuminate and have since begun to hover around the magic lantern of the ascetic ideal already criticized by Nietzsche and then around neon advertising signs We are glowworms that have forgotten that we have within our own affective structure a precious source of orientation The basic thesis is that this source of orientation can be reactivated through the care of desire and practices of emotional sharing So Far from Home Margaret J. Wheatley, 2012-10-08 Wheatley provides encouraging maps for how to design organizations based on living systems capacity for creativity change and adaptation But in the 20 years since the first publication she s seen that in spite of our best efforts the world that s emerged is on a destructive trajectory

Biodeconstruction Francesco Vitale, 2018-02-20 Analyzes Derrida s 1975 seminar *La vie la mort* as a deconstruction of biology with relevance to his work more broadly In *Biodeconstruction* Francesco Vitale demonstrates the key role that the question of life plays in Jacques Derrida s work In the seminar *La vie la mort* 1975 Derrida engages closely with the life sciences especially biology and evolution theory Connecting this line of thought to his analysis of cybernetics in *Of Grammatology* Vitale shows how Derrida develops a notion of biological life as itself a sort of text that is necessarily open onto further articulations and grafts This sets the stage for the deconstruction of the traditional opposition between life and death conceiving of death as an internal condition of the constitution of the living rather than being the opposite of life It also provides the basis for the deconstruction of the rigidly deterministic concept of the genetic program an insight that anticipates recent achievements of biological research in epigenetics and sexual reproduction Finally Vitale argues that this framework can enrich our understanding of Derrida s late work devoted to political issues connecting his use of the

autoimmunitarian lexicon to the theory of cellular suicide in biology This book is extremely interesting and engaging and provides a very original and timely perspective on Derrida's work Its greatest strength is bringing together Derrida's deconstruction in his analysis of the life sciences under the heading of biodeconstruction This term is simple but ingenious and captures beautifully the material dimension of Derrida's work Nicole Anderson author of Derrida Ethics Under Erasure
