*Computational Economics ( Journal )* Hans M. Amman,1999 **Computational Economics** Shu-Heng Chen,L. C. Jain,Chung-Ching Tai,2006-01-01 This book identifies the economic as well as financial problems that may be solved efficiently with computational methods and explains why those problems should best be solved with computational methods Provided by publisher **Computational Economics** Oscar Afonso,Paulo B. Vasconcelos,2015-08-27 Computational Economics A concise introduction is a comprehensive textbook designed to help students move from the traditional and comparative static analysis of economic models to a modern and dynamic computational study The ability to equate an economic problem to formulate it into a mathematical model and to solve it computationally is becoming a crucial and distinctive competence for most economists This vital textbook is organized around static and dynamic models covering both macro and microeconomic topics exploring the numerical techniques required to solve those models A key aim of the book is to enable students to develop the ability to modify the models themselves so that using the MATLAB Octave codes provided on the book and on the website students can demonstrate a complete understanding of computational methods This textbook is innovative easy to read and highly focused providing students of economics with the skills needed to understand the essentials of using numerical methods to solve economic problems It also provides more technical readers with an easy way to cope with economics through modelling and simulation Later in the book more elaborate economic models and advanced numerical methods are introduced which will prove valuable to those in more advanced study This book is ideal for all students of economics mathematics computer science and engineering taking classes on Computational or Numerical Economics **Handbook of Computational Economics** Karl Schmedders,2013-12 Handbook of Computational Economics summarizes recent advances in economic thought revealing some of the potential offered by modern computational methods With computational power increasing in hardware and algorithms many economists are closing the gap between economic practice and the frontiers of computational mathematics In their efforts to accelerate the incorporation of computational power into mainstream research contributors to this volume update the improvements in algorithms that have sharpened econometric tools solution methods for dynamic optimization and equilibrium models and applications to public finance macroeconomics and auctions They also cover the switch to massive parallelism in the creation of more powerful computers with advances in the development of high power and high throughput computing Much more can be done to expand the value of computational modeling in economics In conjunction with volume one 1996 and volume two 2006 this volume offers a remarkable picture of the recent development of economics as a science as well as an exciting preview of its future potential Samples different styles and approaches reflecting the breadth of computational economics as practiced today Focuses on problems with few well developed solutions in the literature of other disciplines Emphasizes the potential for increasing the value of computational modeling in economics **Computational Economics** Gerald L. Mathematical and Computational Economics Kamran Dadkhah,2011-01-11 This is a book on the basics of mathematics and computation and their uses in economics for modern day students and practitioners The reader is introduced to the basics of numerical analysis as well as the use of computer programs such as Matlab and Excel in carrying out involved computations Sections are devoted to the use of Maple in mathematical analysis Examples drawn from recent contributions to economic theory and econometrics as well as a variety of end of chapter exercises help to illustrate and apply the presented concepts

Computational Economics David A. Kendrick,P. Ruben Mercado,Hans M. Amman,2011-10-23 The ability to conceptualize an economic problem verbally to formulate it as a mathematical model and then represent the mathematics in software so that the model can be solved on a computer is a crucial skill for economists Computational Economics contains well known models and some brand new ones designed to help students move from verbal to mathematical to computational representations in economic modeling The authors focus however is not just on solving the models but also on developing the ability to modify them to reflect one s interest and point of view The result is a book that enables students to be creative in developing models that are relevant to the economic problems of their times Unlike other computational economics textbooks this book is organized around economic topics among them macroeconomics microeconomics and finance The authors employ various software systems including MATLAB Mathematica GAMS the nonlinear programming solver in Excel and the database systems in Access to enable students to use the most advantageous system The book progresses from relatively simple models to more complex ones and includes appendices on the ins and outs of running each program The book is intended for use by advanced undergraduates and professional economists and even as a first exposure to computational economics by graduate students Organized by economic topics Progresses from simple to more complex models Includes instructions on numerous software systems Encourages customization and creativity **Computational Approaches to Economic Problems** Hans M. Amman,B. Rustem,Andrew B. Whinston,2013-03-09 This volume contains a selection of papers presented at the first conference of the Society for Computational Economics held at ICC Institute Austin Texas May 21 24 1995 Twenty two papers are included in this volume devoted to applications of computational methods for the empirical analysis of economic and financial systems the development of computing methodology including software related to economics and finance and the overall impact of developments in computing The various contributions represented in the volume indicate the growing interest in the topic due to the increased availability of computational concepts and tools and the necessity of analyzing complex decision problems The papers in this volume are divided into four sections Computational methods in econometrics Computational methods in finance Computational methods for a social environment and New computational methods LIST **Computational Economics and Econometrics** H. Amman,D.A. Belsley,L.F Pau,2012-12-06 The field of Computational Economics is a fast growing area Due to the limitations in analytical modeling more and more researchers apply numerical methods as a means of problem solving In tum these quantitative results can be

used to make qualitative statements This volume of the Advanced Series in Theoretical and Applied and Econometrics comprises a selected number of papers in the field of computational economics presented at the Annual Meeting of the Society Economic Dynamics and Control held in Minneapolis June 1990 The volume covers ten papers dealing with computational issues in Econo metrics Economics and Optimization The first five papers in these proceedings are dedicated to numerical issues in econometric estimation The following three papers are concerned with computational issues in model solving and optimization The last two papers highlight some numerical techniques for solving micro models We are sure that Computational Economics will become an important new trend in Economics in the coming decade Hopefully this volume can be one of the first contributions highlighting this new trend The Editors H M Amman et a1 eds Computational Economics and Econometrics vii 1992 Kluwer Academic Publishers PART ONE ECONOMETRICS LIKELIHOOD EVALUATION FOR DYNAMIC LATENT VARIABLES 1 MODELS DAVID F HENDRY Nuffield College Oxford U K and JEAN FRANc mS RICHARD ISDS Pittsburgh University Pittsburgh PA U S A    Applied Computational Economics and Finance Mario J. Miranda,Paul L. Fackler,2004-08-20 This book presents a variety of computational methods used to solve dynamic problems in economics and finance It emphasizes practical numerical methods rather than mathematical proofs and focuses on techniques that apply directly to economic analyses The examples are drawn from a wide range of subspecialties of economics and finance with particular emphasis on problems in agricultural and resource economics macroeconomics and finance The book also provides an extensive Web site library of computer utilities and demonstration programs The book is divided into two parts The first part develops basic numerical methods including linear and nonlinear equation methods complementarity methods finite dimensional optimization numerical integration and differentiation and function approximation The second part presents methods for solving dynamic stochastic models in economics and finance including dynamic programming rational expectations and arbitrage pricing models in discrete and continuous time The book uses MATLAB to illustrate the algorithms and includes a utilities toolbox to help readers develop their own computational economics applications
