Calcium Signaling Protocols Methods In Molecular Biology Vol 31:

Calcium Signaling Protocols David G. Lambert, 2008-02-03 The regulation of intracellular Ca is a common theme presented in many papers over the last 20 or so years and the description of the Ca sensitive indicator dye fura 2 in 1985 resulted in a massive increase in these types of studies Aspects of the regulation of intracellular Ca have been dealt with in many of the subsequent chapters and will therefore not be covered again Calcium Signaling Protocols results from a chance discussion with Dr R I Norman of the Department of Medicine at Leicester University and represents a major effort from a group of extremely helpful and very patient authors Putting a book like this together takes time and I am indebted to these authors without whom this project would have remained a chance discussion I am also very grateful to Professor J M Walker the series editor for all his help and advice over the course of this project and particularly his help editing the first batch of chapters I would also like to thank Dr E L Pallett for help and advice regarding interconversion of Mac and Word files and for archiving chapters

Isotope labeling in Biomolecular NMR Hanudatta S. Atreya, 2012-10-18 NMR spectroscopy has undergone a revolution in recent years with the advent of several new methods overcoming the problems of sensitivity and resolution Recent developments in biotechnology have made it easier and economical to introduce ^{13}C ^{15}N and ^2H into proteins and nucleic acids At the same time there has been an explosion in the number of NMR experiments that utilize such isotope labeled samples Thus a combination of isotopic labeling and multidimensional multinuclear NMR has opened up new avenues for structural studies of proteins nucleic acids and their complexes This book will focus on recent developments in isotope labeling methods for structural studies of small molecules peptides proteins and nucleic acids The aim of the book is to serve as a compendium of isotope labeling for the biomolecular NMR community providing comprehensive coverage of the existing methods and latest developments along with protocols and practical hints on the various experimental aspects The book will cover a wide range of topics in isotope labeling under one title including emerging areas of metabolonomics and solid state NMR

Interleukin Protocols Luke A. J. O'Neill, Andrew Bowie, 2008-02-02 Interleukins are a family of proteins that regulate the maturation differentiation or activation of cells involved in immunity and inflammation and belong to a broader family termed cytokines Collectively these proteins are the key orchestrators of host defense and the response to tissue injury There are currently 23 different interleukins numbered from IL 1 to IL 23 although the full extent of the interleukin family will only become clear upon analysis of the human genome sequence Most important interleukins are central to the pathogenesis of a wide range of diseases that involve an immune component including such conditions as rheumatoid arthritis multiple sclerosis ulcerative colitis psoriasis and asthma Interleukins have also been implicated in other conditions including cancer migraine myocardial infarction and depression In essence when cells are activated by interleukins a program of gene expression is initiated in the target cell that alters the cell's phenotype leading to enhanced immune reactivity inflammation and or proliferation Interleukins are therefore at the core of the cellular basis for many

diseases They are the subject of intense investigation by biomedical researchers and the targeting or use of interleukins in the clinic is proceeding apace Approaches such as targeting IL 4 in asthma or IL 1 in joint disease are being pursued and it is likely that in the next 5 10 years a number of new therapies based on either inhibiting or administering interleukins will be available **ICN** ICN Pharmaceuticals, inc,1999 *Imaging Living Cells* Rosario Rizzuto,Cristina Fasolato,2012-12-06 Improved technology for imaging living cells specific cellular targets and organelles is having a dramatic impact on basic and applied research By combining optical design and molecular genetics a new series of tools is being developed and successfully applied together with classical probes Novel labelling strategies better software for image enhancement and analysis are now available and allow image acquisition with greater speed and precision This lab manual intended as for bench top use is suitable for both scientists and graduate students combines an update on the most advanced imaging procedures with detailed protocols Examples cleverly selected from the wide repertoire of cell physiology cover different functional aspects such as distribution of multiple ions electrical activity exocytosis gene expression and the cell cycle

Conn,2008-03-07 The collection of systems represented in this volume is a unique effort to reflect the diversity and utility of models used in biomedicine That utility is based on the consideration that observations made in particular organisms will provide insight into the workings of other more complex systems This volume is therefore a comprehensive and extensive collection of these important medical parallels **Applications of Immunocytochemistry** Hesam Dehghani,2012-03-09

Immunocytochemistry is classically defined as a procedure to detect antigens in cellular contexts using antibodies However over the years many aspects of this procedure have evolved within a plethora of experimental setups There are different ways to prepare a given specimen different kinds of antibodies to apply different techniques for imaging and different methods of analyzing the data In this book various ways of performing each individual step of immunocytochemistry in different cellular contexts are exemplified and discussed Applications of Immunocytochemistry offers technical and background information on different steps of immunocytochemistry and presents the application of this technique and its adaptations in cell lines neural tissue pancreatic tissue sputum cells sperm cells preimplantation embryo arabidopsis fish gonads and Leishmania **Developmental Biology Protocols** Rocky S. Tuan,Cecilia W. Lo,2008-02-02

Developmental biology is one of the most exciting and fast growing fields today In part this is so because the subject matter deals with the innately fascinating biological events changes in form structure and function of the organism The other reason for much of the excitement in developmental biology is that the field has truly become the unifying melting pot of biology and provides a framework that integrates anatomy physiology genetics biochemistry and cellular and molecular biology as well as evolutionary biology No longer is the study of embryonic development merely embryology In fact development biology has produced important paradigms for both basic and clinical biomedical sciences Though modern developmental biology has its roots in experimental embryology and the even more classical chemical embryology the recent explosive and remarkable advances in developmental biology are critically linked to the advent of the cellular and molecular biology revolution The impressive arsenal of experimental and analytical tools derived from cell and molecular biology which promise to continue to expand together with the exponentially developing sophistication in functional imaging and information technologies guarantee that the study of the developing embryo will contribute one of the most captivating areas of biological research in the next millennium **Advances in Bioanalytical Methods for Probing Ligand-Target Interactions** Quezia B.

Gerd Gellissen,2006-03-06 While the choices of microbial and eukaryotic expression systems for production of recombinant proteins are many most researchers in academic and industrial settings do not have ready access to pertinent biological and technical information since it is normally scattered throughout the scientific literature This book closes the gap by providing

information on the general biology of the host organism a description of the expression platform a methodological section with strains genetic elements vectors and special methods where applicable as well as examples of proteins produced with the respective platform The systems thus described are well balanced by the inclusion of three prokaryotes two Gram negatives and one Gram positive four yeasts two filamentous fungi and two higher eukaryotic cell systems mammalian and plant cells Throughout the book provides valuable practical and theoretical information on the criteria and schemes for selecting the appropriate expression platform the possibility and practicality of a universal expression vector and on comparative industrial scale fermentation with the production of a recombinant Hepatitis B vaccine chosen as an industrial example With a foreword by Herbert P Schweizer Colorado State University USA As a whole this book is a valuable and overdue resource for a varied audience It is a practical guide for academic and industrial researchers who are confronted with the design of the most suitable expression platform for their favorite protein for technical or pharmaceutical purposes In addition the book is also a valuable study resource for professors and students in the fields of applied biology and biotechnology
