## **Coastal And Maritime Archaeology:**

*Coastal and Maritime Archaeology* Jordan E. Kerber, 1991 Includes adaptation to various coastal and maritime settings and resources exploitation of shellfish and formation of shell middens and excavation and preservation of specific coastal and maritime archeological sites a valuable resource ARBA      **The Oxford Handbook of Maritime Archaeology** Alexis

Catsambis, Ben Ford, Donny L. Hamilton, 2014-02 This title is a comprehensive survey of maritime archaeology as seen through the eyes of nearly fifty scholars at a time when maritime archaeology has established itself as a mature branch of archaeology      The Rising Tide F. A. Aberg, Carenza Lewis, 2000 The zone where sea meets land is an ever changing environment which often reveals fascinating details of human occupation and exploitation of the landscape This fragile historic environment also creates both research and management problems The papers published in this book were given at a joint conference of the Nautical Archaeology Society and the Society for Landscape Studies They review various aspects of and approaches to archaeological research in British coastal landscapes bringing together research from two traditionally separate disciplines terrestrial and maritime archaeology      *Underwater and Coastal Archaeology in Latin America* Dolores Elkin, Christophe Delaere, 2023-12-05 This volume features a range of theoretical and methodological approaches to underwater and coastal archaeology in Latin America showcasing the efforts of 82 researchers working across the region

*3D Recording and Interpretation for Maritime Archaeology* John K. McCarthy, Jonathan Benjamin, Trevor Winton, Wendy van Duivenvoorde, 2019-03-06 This open access peer reviewed volume was inspired by the UNESCO UNITWIN Network for Underwater Archaeology International Workshop held at Flinders University Adelaide Australia in November 2016 Content is based on but not limited to the work presented at the workshop which was dedicated to 3D recording and interpretation for maritime archaeology The volume consists of contributions from leading international experts as well as up and coming early career researchers from around the globe The content of the book includes recording and analysis of maritime archaeology through emerging technologies including both practical and theoretical contributions Topics include photogrammetric recording laser scanning marine geophysical 3D survey techniques virtual reality 3D modelling and reconstruction data integration and Geographic Information Systems The principal incentive for this publication is the ongoing rapid shift in the methodologies of maritime archaeology within recent years and a marked increase in the use of 3D and digital approaches This convergence of digital technologies such as underwater photography and photogrammetry 3D sonar 3D virtual reality and 3D printing has highlighted a pressing need for these new methodologies to be considered together both in terms of defining the state of the art and for consideration of future directions As a scholarly publication the audience for the book includes students and researchers as well as professionals working in various aspects of archaeology heritage management education museums and public policy It will be of special interest to those working in the field of coastal cultural resource management and underwater archaeology but will also be of broader interest to anyone interested in archaeology and to

those in other disciplines who are now engaging with 3D recording and visualization

### **The Archaeology of Maritime**

**Landscapes** Ben Ford, 2011-05-21 Maritime cultural landscapes are collections of submerged archaeological sites or combinations of terrestrial and submerged sites that reflect the relationship between humans and the water. These landscapes can range in size from a single beach to an entire coastline and can include areas of terrestrial sites now inundated as well as underwater sites that are now desiccated. However, what binds all of these sites together is the premise that each aspect of the landscape—cultural, political, environmental, technological, and physical—is interrelated and can not be understood without reference to the others. In this maritime cultural landscape approach, individual sites are treated as features within the larger landscape, and the interpretation of single sites adds to a larger analysis of a region or culture. This approach provides physical and theoretical links between terrestrial and underwater archaeology as well as prehistoric and historic archaeology, consequently providing a framework for integrating such diverse topics as trade, resource procurement, habitation, industrial production, and warfare into a holistic study of the past. Landscape studies foster broader perspectives and approaches extending the study of maritime cultures beyond the shoreline. Despite this potential, the archaeological study of maritime landscapes is a relatively untried approach with many questions regarding the methods and perspectives needed to effectively analyze these landscapes. The chapters in this volume, which include contributions from the United States, the United Kingdom, Norway, and Australia, address many of the theoretical and methodological questions surrounding maritime cultural landscapes. The authors comprise established scholars as well as archaeologists at the beginning of their careers, providing a healthy balance of experience and innovation. The chapters also demonstrate parity between method and theory, where the varying interpretations of culture and space are given equal weight with the challenges of investigating both wet and dry sites across large areas.

### **Our Blue Planet: An Introduction to Maritime and Underwater Archaeology**

Ben Ford, Jessi J. Halligan, Alexis Catsambis, 2020-04-07 Our Blue Planet provides a comprehensive introduction to the field of maritime and underwater archaeology. Situating the field within the broader study of history and archaeology, this book advocates that an understanding of how our ancestors interacted with rivers, lakes, and oceans is integral to comprehending the human past. Our Blue Planet covers the full breadth of maritime and underwater archaeology, including formerly terrestrial sites drowned by rising sea levels, coastal sites, and a wide variety of wreck sites ranging across the globe and spanning from antiquity to World War II. Beginning with a definition of the field and several chapters dedicated to the methods of finding, recording, and interpreting submerged sites, Our Blue Planet provides an entry point for all readers, whether or not they are familiar with maritime and underwater archaeology or archaeology in general. The book then shifts to a thematic approach with chapters exploring human interactions with the watery world both along the coasts and by ship. These chapters discuss the relationships between culture, technology, and environment that allowed humans through time to spread across the globe. Because ships were the primary means for humans to interact with large bodies of water, they are the

focus of several chapters on the development of shipbuilding technology the lives of sailors and the uses of ships in exploration expansion and warfare The book ends with chapters on how and why the non renewable submerged archaeological record should be managed so that both current and future generations can learn from the achievements and failures of past societies as well as on how anyone can become involved in maritime and underwater archaeology Throughout the reader benefits from the personal reflections of a number of leading figures in the field

*A Maritime Archaeology of Ships* J. R. Adams, 2013-12-11 In the last fifty years the investigation of maritime archaeological sites in the sea in the coastal zone and in their interconnecting locales has emerged as one of archaeology's most dynamic and fast developing fields No longer a niche interest maritime archaeology is recognised as having central relevance in the integrated study of the human past Within maritime archaeology the study of watercraft has been understandably prominent and yet their potential is far from exhausted In this book Jon Adams evaluates key episodes of technical change in the ways that ships were conceived designed built used and disposed of As technological puzzles they have long confounded explanation but when viewed in the context of the societies in which they were created mysteries begin to dissolve Shipbuilding is social practice and as one of the most complex artefacts made changes in their technology provide a lens through which to view the ideologies strategies and agency of social change Adams argues that the harnessing of shipbuilding was one of the ways in which medieval society became modern and while the primary case studies are historical he also demonstrates that the relationships between ships and society have key implications for our understanding of prehistory in which seafaring and communication had similarly profound effects on the tide of human affairs

*Bridging the Gap in Maritime Archaeology: Working with Professional and Public Communities* Katy Bell, 2019-02-28 Proceedings of a conference session held at CIfA 2014 The session focused on ways in which it is possible to engage with a wider audience in the course of maritime archaeological work Papers offer a series of case studies exhibiting best practice with regard to individual maritime projects and examples of outreach to local communities

Ireland's Maritime Archaeology Aidan O'Sullivan, Ian W. Doyle, Beatrice Kelly, Heritage Council (Ireland), 2006

Under the Sea: Archaeology and Palaeolandscapes of the Continental Shelf Geoffrey N. Bailey, Jan Harff, Dimitris Sakellariou, 2017-05-16 This book focuses on issues of method and interpretation in studies of submerged landscapes concentrating on illustrations and case studies from around Europe with additional examples from other parts of the world Such landscapes were once exposed as dry land during the low sea levels that prevailed during the glacial periods that occupied most of the past million years and provided extensive new territories for human exploitation Their study today involves underwater investigation using techniques and strategies which are clearly set out in these chapters The underwater landscape provides a rich source of information about the archaeology of human settlement and long term changes in environment climate and sea level This book highlights how such information can be revealed and interpreted The examples presented here and the focus on techniques make this book of worldwide relevance Chapters describe examples of

underwater archaeological investigation as well as collaboration with offshore industries and legal management and training issues relating to underwater cultural heritage Such studies point to the significance of this drowned landscape and readers are invited to consider its human impact in terms of past settlement and population dispersal through palaeolandscape reconstruction and interpretation in relation to broader themes in human prehistory This volume is based on work from COST Action SPLASHCOS a four year multi disciplinary and multi national research program supported by COST European Cooperation in Science and Technology and has something to benefit all those with an interest in the sea floor of the continental shelf and the archaeological and social impact of sea level change including archaeologists marine scientists geographers cultural heritage managers commercial and governmental organisations policy makers and interested members of the public

**Maritime Heritage in Crisis** Richard M. Hutchings, 2016-12-08 Maritime heritage landscapes are undergoing a period of unprecedented crisis severely impacted by coastal development population growth and climate change Presenting archaeology and CRM as a grave threat this volume offers an important lesson on the relationship between neoliberal heritage regimes and global ecological breakdown

**SOMA 2016: Proceedings of the 20th Symposium on Mediterranean Archaeology** Hakan Ö niz, Sergey Fazlullin, 2022-03-10 SOMA 2016 focused on the archaeology of the Northern Black Sea while rich in archaeological sites the region is also subject to active industrial development In addition to archaeological finds in various parts of the Mediterranean papers focus on new ideas for the conservation and management of sites of historical and cultural heritage

**Formation Processes of Maritime Archaeological Landscapes** Alicia Caporaso, 2017-01-05 Research into the anthropogenic and taphonomic processes that affect the formation of maritime archaeological resources has grown significantly over the last decade in both theory and the analysis of specific sites and associated material culture The addition of interdisciplinary inquiry investigative techniques and analytical modeling from fields such as engineering oceanography and marine biology have increased our ability to trace the unique pathways through which archaeological sites progress from initial deposition to the present yet can also link individual sites into an integrated socio environmental maritime landscape This edited volume presents a global perspective of current research in maritime archaeological landscape formation processes In addition to classically considered submerged material culture and geography or those that can be accessed by traditional underwater methodology case studies include less often considered sites and landscapes These landscapes for example require archaeologists to use geophysical marine survey equipment to characterize extensive areas of the seafloor or go above the surface to access maritime archaeological resources that have received less scholarly attention

**Encyclopaedia of Underwater and Maritime Archaeology** James P. Delgado, 1997 The theory and practice of underwater archaeology includes nearly every archaeological discipline from prehistoric archaeology to the modern era

*Sailing from Polis to Empire: Ships in the Eastern Mediterranean during the Hellenistic Period* Emmanuel Nantet , 2020-07-22 What can the architecture of ancient

ships tell us about their capacity to carry cargo or to navigate certain trade routes How do such insights inform our knowledge of the ancient economies that depended on maritime trade across the Mediterranean These and similar questions lie behind *Sailing from Polis to Empire* a fascinating insight into the practicalities of trading by boat in the ancient world Allying modern scientific knowledge with Hellenistic sources this interdisciplinary collection brings together experts in various fields of ship archaeology to shed new light on the role played by ships and sailing in the exchange networks of the Mediterranean Covering all parts of the Eastern Mediterranean these outstanding contributions delve into a broad array of data literary epigraphical papyrological iconographic and archaeological to understand the trade routes that connected the economies of individual cities and kingdoms Unique in its interdisciplinary approach and focus on the Hellenistic period this collection digs into the questions that others don't think to ask and comes up with sometimes surprising answers It will be of value to researchers in the fields of naval architecture Classical and Hellenistic history social history and ancient geography and to all those with an interest in the ancient world or the seafaring life **Handbook of Sea-Level Research** Ian

Shennan, Antony J. Long, Benjamin P. Horton, 2015-02-19 Measuring sea level change be that rise or fall is one of the most pressing scientific goals of our time and requires robust scientific approaches and techniques This Handbook aims to provide a practical guide to readers interested in this challenge from the initial design of research approaches through to the practical issues of data collection and interpretation from a diverse range of coastal environments Building on thirty years of international research the Handbook comprises 38 chapters that are authored by leading experts from around the world The Handbook will be an important resource to scientists interested and involved in understanding sea level changes across a broad range of disciplines policy makers wanting to appreciate our current state of knowledge of sea level change over different timescales and many teachers at the university level as well as advanced level undergraduates and postgraduate research students wanting to learn more about sea level change Additional resources for this book can be found at [www.wiley.com/go/shennan/sealevel](http://www.wiley.com/go/shennan/sealevel) **Channel Islands National Marine Sanctuary, Management Plan**, 2008 *Citizen*

*Science in Maritime Archaeology* Della A. Scott-Ireton, Jennifer E. Jones, Jason T. Raupp, 2023-09-19 This volume addresses the ways maritime archaeologists have engaged citizen scientists presenting examples of projects and organizations that have involved volunteers in the important work of gathering and processing data *Site Formation Processes of Submerged Shipwrecks* Matthew E. Keith, 2016-01-30 Many factors influence the formation of shipwreck sites the materials from which the ship was built the underwater environment and subsequent events such as human activity storms and chemical reactions In this first volume to comprehensively catalogue the physical and cultural processes affecting submerged ships Matthew Keith brings together experts in diverse fields such as geology soil and wood chemistry micro and marine biology and sediment dynamics The case studies identify and examine the natural and anthropogenic processes corrosion and degradation on one hand fishing and trawling on the other that contribute to the present condition of shipwreck sites The

contributors also discuss how these varied and often overlapping events influence the archaeological record. Offering an in-depth analysis of emerging technologies and methods, acoustic positioning, computer modeling, and site reconstruction, this is an essential study for the research and preservation of submerged heritage sites.
