Coastal Zone Management Handbook:

Coastal Zone Management Handbook John R. Clark, 2018-05-04 Coastal Zone Management Handbook comprises the first complete manual on coastal resource planning and management technology. Written by an international consultant, this handbook reflects a global perspective on the natural resources, sensitivities, economics, development, productivity, and diversity of coastal zones. The emphasis is on tropical and subtropical coastal ecosystems, but the information is widely applicable. In addition to its comprehensive coverage of general concepts related to coastal regions, the book describes the strategic basis for coastal management, provides a set of working tools for management and planning activities, and presents case histories of management projects around the globe. Extensive references are provided for each management analysis practice technique and solution. Coastal Zone Management Handbook is made up of four sections: **Coastal Zone**

Being broadly interdisciplinary in its treatment of coasts, the *Encyclopedia of Coastal Science* features contributions by 245 well-known international specialists in their respective fields and is abundantly illustrated with line drawings and photographs. Not only does this volume offer an extensive number of entries, it also includes various appendices, an illustrated glossary of coastal geomorphology, and extensive bibliographic listings. Perspectives on Integrated Coastal Zone Management Wim Salomons,Kerry Turner,Luiz D. de Lacerda,S. Ramachandran,2012-12-06 All coastal areas are facing a growing range of stresses and shocks the scale of which now poses threats to the resilience of both human and environmental coastal systems Responsible agencies are seeking better ways of managing the causes and consequences of the environmental change process in coastal zones This volume discusses the basic principles underpinning a more integrated approach to coastal management and highlights the obstacles that may be

met in practice in both developed and developing countries Successful strategies will have to encompass all the elements of management from planning and design through financing and implementation as highlighted in this book *Coastal Seas* John R. Clark, 2009-07-15 This succinct technical reference of coastal zone resource management is aimed both at students taking courses in coastal management or marine conservation and practitioners in these fields In response to a worldwide demand Coastal Seas deals mostly with methodology and provides practitioners scholars and students with the ideas tools materials and strategies needed to manage coastal resources and shoreline development Although tropical developing nations have the greatest need for this book the principles are universal and will be of interest and relevance to all Provides a direction for conservation of coastal resources and marine biodiversity into the 21st century Suggests solutions to major conservation problems including pollution storm damage and beach erosion depletion of sea fisheries excessive shoreline development and destruction of essential habitats such as coral reefs and mangrove forests Gives practical advice to students and practitioners alike on coastal conservation methodology Presents the outcome of nineteen international coastal zone conservation case studies Discusses resource vulnerabilities design of coastal conservation programs methods and tools for conservation and sources of professional training

Coastal and Marine Geo-Information Systems David R. Green, Stephen D. King, 2006-04-11 The emphasis now placed on the concept of sediment cells as boundaries for coastal defence groups and the development of SMPs should help CPAs realise the importance of natural processes at the coast when designing defence and protection schemes However this will only be the case where defence groups exist and where CPAs take up the challenge of developing SMPs Coastal landscapes have been produced by the natural forces of wind waves and tides and many are nationally or internationally important for their habitats and natural features Past practices at the coast such as the construction of harbours jetties and traditional defence systems may have contributed to the deterioration of the coast English Nature 1992 have argued that if practices and methods of coastal defence are allowed to continue then coastlines would be faced with worsening consequences including The loss of mudflats and the birds which live on them Damage to geological Sites of Special Scientific Interest SSSIs and scenic heritage by erosion due to the stabilisation of the coast elsewhere Cutting of sediment supplies to beaches resulting in the loss of coastal wildlife Cessation through isolation from coastal processes of the natural operation of spits with serious deterioration of rare plants animals and geomorphological and scenic qualities English Nature 1992 A number of designations provided by national and international legislation do exist to aid conservation
