Bower,2022-09-28 Introduction to Computational Engineering with MATLAB aims to teach readers how to use MATLAB programming to solve numerical engineering problems The book focuses on computational engineering with the objective of helping engineering students improve their numerical problem solving skills The book cuts a middle path between undergraduate texts that simply focus on programming and advanced mathematical texts that skip over foundational concepts feature cryptic mathematical expressions and do not provide sufficient support for novices Although this book covers some advanced topics readers do not need prior computer programming experience or an advanced mathematical background Instead the focus is on learning how to leverage the computer and software environment to do the hard work

The problem areas discussed are related to data driven engineering statistics linear algebra and numerical methods Some example problems discussed touch on robotics control systems and machine learning Features Demonstrates through algorithms and code segments how numeric problems are solved with only a few lines of MATLAB code Quickly teaches students the basics and gets them started programming interesting problems as soon as possible No prior computer programming experience or advanced math skills required Suitable for students at undergraduate level who have prior knowledge of college algebra trigonometry and are enrolled in Calculus I MATLAB script files functions and datasets used in examples are available for download from <http://www.routledge.com/9781032221410> The Little Learner Daniel P. Friedman, Anurag Mendhekar, 2023-02-21 A highly accessible step by step introduction to deep learning written in an engaging question and answer style The Little Learner introduces deep learning from the bottom up inviting students to learn by doing With the characteristic humor and Socratic approach of classroom favorites The Little Schemer and The Little Typer this kindred text explains the workings of deep neural networks by constructing them incrementally from first principles using little programs that build on one another Starting from scratch the reader is led through a complete implementation of a substantial application a recognizer for noisy Morse code signals Example driven and highly accessible The Little Learner covers all of the concepts necessary to develop an intuitive understanding of the workings of deep neural networks including tensors extended operators gradient descent algorithms artificial neurons dense networks convolutional networks residual networks and automatic differentiation Conversational style illustrations and question and answer format make deep learning accessible and fun Incremental approach constructs advanced concepts from first principles Presents key ideas of machine learning using a small manageable subset of the Scheme language Suitable for anyone with knowledge of high school math and some programming experience The Constitution of Algorithms Florian Jatón, 2021-04-27 A laboratory study that investigates how algorithms come into existence Algorithms often associated with the terms big data machine learning or artificial intelligence underlie the technologies we use every day and disputes over the consequences actual or potential of new algorithms arise regularly In this book Florian Jatón offers a new way to study computerized methods providing an account of where algorithms come from and how they are constituted investigating the practical activities by which algorithms are progressively assembled rather than what they may suggest or require once they are assembled *Fast Algorithms for Structured Matrices* Vadim Olshevsky, 2003 One of the best known fast computational algorithms is the fast Fourier transform method Its efficiency is based mainly on the special structure of the discrete Fourier transform matrix Recently many other algorithms of this type were discovered and the theory of structured matrices emerged This volume contains 22 survey and research papers devoted to a variety of theoretical and practical aspects of the design of fast algorithms for structured matrices and related issues Included are several papers containing various affirmative and negative results in this direction The theory of rational interpolation is one of the excellent sources providing

intuition and methods to design fast algorithms The volume contains several computational and theoretical papers on the topic There are several papers on new applications of structured matrices e g to the design of fast decoding algorithms computing state space realizations relations to Lie algebras unconstrained optimization solving matrix equations etc The book is suitable for mathematicians engineers and numerical analysts who design study and use fast computational algorithms based on the theory of structured matrices **Large-Scale Scientific Computing** Ivan Lirkov,Svetozar D.
