Hollander, Ann Sussman, 2020-10-15 Embracing a biological and evolutionary perspective to explain the human experience of place *Urban Experience and Design* explores how cognitive science and biometric tools provide an evidence based foundation for architecture and planning Aiming to promote the creation of a healthier and happier public realm this book describes how unconscious responses to stimuli outside our conscious awareness direct our experience of the built environment and govern human behavior in our surroundings This collection contains 15 chapters including contributions from researchers in the US the UK the Netherlands France and Iran Addressing topics such as the impact of eye tracking analysis and seeing beauty and empathy within buildings *Urban Experience and Design* encourages us to reframe our understanding of design including the narrative of how modern architecture and planning came to be in the first place This volume invites students academics and scholars to see how cognitive science and biometric findings give us remarkable 21st century metrics for evaluating and improving designs even before they are built

Precedented Environmental Futures Colin Porteous, 2019-04-17 This book addresses the built environment through the lens of environmental architecture and in a holistic manner It moves gradually from psychophysiology and thinking doing feeling modalities through environmental criteria to environmental modulation concluding with a debate around mitigation and adaptation Much use is made of re interpreting past quotations seen as relevant for environmental architecture No definitive conclusions are reached but rather broad discursive messages are offered The text will have lasting luminance for new generations involved with the built environment

*Tokyoids* Francois Blanciak, 2022-09-13 A photographic survey of the robotic face of Tokyo buildings and an argument that robot aesthetics plays a central role in architectural history In *Tokyoids* architect Francois Blanciak surveys the robotic faces omnipresent in Tokyo buildings offering an architectural taxonomy based not on the usual variables size material historical style but on the observable expressions of buildings Are the eyes windows twinkling the mouth door laughing Is that balcony a howl of distress Investigating robot aesthetics through his photographs of fifty buildings Blanciak argues that the robot face originated in architecture before the birth of robotics and has played a central role in architectural history Blanciak first puts the robot face into historical perspective examining the importance of the face in architectural theory and demonstrating that the construction of architecture s emblematic portraits triggered the emergence of a robot aesthetics He then explores the emotions conveyed by the photographed buildings robot faces in chapters titled Awe Wrath Mirth Pain Angst and Hunger As he does so he considers among other things the architectural relevance of Tokyo s ordinary buildings the repression of the figural in contemporary architecture an aesthetic of dismemberment linked to the structure of the Japanese language and local building design and the influence of automation

technology upon human interaction Part photographic survey part theoretical inquiry Tokyoids upends the usual approach to robotics in architecture by considering not the automation of architectural output but the aesthetic properties of the robot

Architecture and the Mimetic Self Lucy Huskinson, 2018-02-02 Buildings shape our identity and sense of self in profound ways that are not always evident to architects and town planners or even to those who think they are intimately familiar with the buildings they inhabit Architecture and the Mimetic Self provides a useful theoretical guide to our unconscious behaviour in relation to buildings and explains both how and why we are drawn to specific elements and features of architectural design It reveals how even the most uninspiring of buildings can be modified to meet our unconscious expectations and requirements of them and by the same token it explores the repercussions for our wellbeing when buildings fail to do so Criteria for effective architectural design have for a long time been grounded in utilitarian and aesthetic principles of function efficiency cost and visual impact Although these are important considerations they often fail to meet the fundamental needs of those who inhabit and use buildings Misconceptions are rife not least because our responses to architecture are often difficult to measure and are in large part unconscious By bridging psychoanalytic thought and architectural theory Architecture and the Mimetic Self frees the former from its preoccupations with interpersonal human relations to address the vital relationships that we establish with our nonhuman environments In addition to providing a guide to the unconscious behaviours that are most relevant for evaluating architectural design this book explains how our relationships with the built environment inform a more expansive and useful psychoanalytic theory of human relationship and identity It will appeal to psychoanalysts and analytical psychologists architects and all who are interested in the overlaps of

psychology architecture and the built environment
